DIEHL

ENCLOSED ARC

LAMPS

MOST IMPROVED TYPE FOR DIRECT CURRENT CIRCUITS.
HIGHEST DEVELOPMENT IN ELECTRICAL DESIGN.

SHOWROOMS:

561-563 Broadway, New York.
192-194 Van Buren Street, Chicago.
128-132 Essex Street, Boston.

DIEHL MANUFACTURING CO.,
ELIZABETHPORT, N. J.

The American Electric Meter Co.,

9th St. and Montgomery Ave., Philadelphia, Pa.,

Is now prepared to take orders for early delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is magnetically shielded.
This meter is direct reading, having no multiplier.
This meter does not require one-thousandth of a horse power.
This meter will operate for years without opening.
This meter has no springs, jewels or frictional errors.
This meter once right is always right.

We Are Headquarters For Batteries.

Dry—

Weco.

ALSO ZINCS, CARBONS, COPPERS AND SOLUTIONS AND ALL BATTERY ACCESSORIES.

WESTERN ELECTRIC COMPANY,

CHICAGO. NEW YORK.

THE S-W Arc Light Radiators

BRILLIANT AND ECONOMICAL.

Absolutely free from **side shadows**, or those cast by flying insects.

Diffuses light uniformly.

Easily attached and detached.

Can be cleaned without removal and are practically indestructible.

Made for all styles of arc lamps.

Send for descriptive circular and prices.

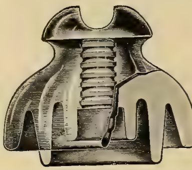
General Agency: Chicago General Fixture Co., 169 Adams Street, Chicago, Ill.

Shadowless Radiator Mfg. Co.,

FARIBAULT, MINN.

High Potential Insulators

IN GLASS AND PORCELAIN.



Will carry any current up to 50,000 volts. Used on the Niagara Falls and Buffalo Transmission lines.

Insulators for High Voltage Power Transmission, Electric Railway, Electric Light, Telegraph and Telephone Lines.

Send for Catalogue.

The American Electric Meter Co.,

9th St. and Montgomery Ave., Philadelphia, Pa.,

Is now prepared to take orders for early delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is magnetically shielded.
This meter is direct reading, having no multiplier.
This meter does not require one-thousandth of a horse power.
This meter will operate for years without opening.
This meter has no springs, jewels or frictional errors.
This meter once right is always right.

WESTERN ELECTRIC COMPANY,

CHICAGO. NEW YORK.

High-Tension, Long-Distance Transmission Underground.

OUR COMPETITORS SAID WE WOULD FAIL. READ THE TESTIMONIALS IN LAST WEEK'S PAPERS; THEN READ THE FOLLOWING:

LACHINE RAPIDS HYDRAULIC & LAND CO., Ltd.

MONTREAL, February 25, 1898.

THE NATIONAL CONDUIT & CABLE CO., Times Building, New York, U. S. A.

Dear Sirs: We have pleasure to inform you that the paper-insulated lead-covered transmission cables that you have installed for us in your cement lined ducts, as per contract, have for some time past been carrying current from our plant at Lachine Rapids through the streets of Montreal and through the subways under Lachine Canal at Seminary Street and Cote St. Paul. We have had between 4,000 and 5,000 volts on these continually, and so far have proved very satisfactory.

We might mention that the cables crossing the canal are lying in water all the time and we have had no cause to regret the selection of your cable, and trust that the present relationship between our respective companies may still continue.

Yours faithfully,

W. McLEA WALBANK, Managing Director.

WE ARE JUST AS SUCCESSFUL IN ALL KINDS OF ELECTRICAL DISTRIBUTION UNDERGROUND. WE HAVE THE LARGEST AND BEST EQUIPPED CABLE AND CONDUIT PLANT IN THE WORLD. WRITE US FOR INFORMATION.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 42 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

IT COSTS SO LITTLE AND WORKS SO WELL

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time. Very truly yours,

STOVER BICYCLE MFG. CO.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician, but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is about all that is required, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

CREOSOTED WOOD CONDUITS

FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

THE MASTERPIECES OF ELECTRICAL LITERATURE

Prof. Edwin J. Houston is a teacher of undisputed ability. He is even more than a teacher because the pages he has inscribed teach their lesson directly and effectively. There are many that write, but few of those that write truly teach and impart the spirit and subject matter of the work in a way that inspires the reader to further efforts. Prof. Houston is a man of the calibre who teaches from his writings. For many years his reputation has been so widespread that to merely mention his name in connection with any scientific achievement was to make the same worthy of respect and consideration. He is a fluent, simple and effective writer.

Dr. Arthur E. Kennelly is an electrical engineer of the highest standing. His varied experiences, and his keen insight into scientific facts have placed him among the best-known representatives of electrical progress. For more than twenty years he has devoted himself persistently to the electrical science. A great deal of laboratory information, many important electrical laws, and certain rapid and effective methods were discovered by him.

Prof. Silvanus P. Thompson is regarded by all critics as the greatest writer on electrotechnics known to electrical engineers. His remarkable genius in this direction manifested itself many years ago, when the science of electricity was in a budding and little known that was not arbitrary, empirical, and in many respects useless as a means of further progress. There were many threads to be gathered up, composing the tangled skein of practice, and it required a discerning eye, as well as a well trained, and a broadness of comprehension rarely met with, to weave together these hidden threads of fragmentary experience and disconnected thought.

Two Clever Electricians

told us last week that they were far in advance of any information to be had in books on the subject of Dynamo-Electric Machinery by the highest authorities. Their orders to us, therefore, amounted to [redacted]

Several hundred others, however, not quite so clever thought differently, and their orders to us amount to the sum of

$12,600.00.

These orders were placed for sets of the

INTERNATIONAL ELECTRICAL LIBRARY

before any advertisement appeared, other than our book of specimen pages. Since January 1, 1898, orders have exceeded **$25,000.00.**

THE INTERNATIONAL ELECTRICAL LIBRARY.

Now the Question is Just This:

Has your ambition in life been gratified?

Are you one who knows it all? Have you nothing more to learn? There are some men, but mostly boys, who think they do.

We take it that you have ambition, and, like Lord Kelvin, the eminent scientist, you will always have something to learn to the end of your days.

Perhaps you may be a steam engineer, an electrical worker, or a foreman over men. Is your present position as high as your ambition prompts you to go? Certainly not. Then it is high time that you avail yourself of the knowledge gathered into the six sumptuous volumes of the INTERNATIONAL ELECTRICAL LIBRARY, by Electrical experts of world-known ability. The value of this authentic information must be evident to you—it cannot be estimated by dollars and cents. Consider the value of this work from an educational standpoint—a work that was not possible two short years ago, and then the nominal terms of payment at which you can own a complete set of the standard electrical library of the world.

Now what do you owe yourself? Every proved item of value in your profession should be yours. You owe it to yourself to see that you get it. It is poor economy to struggle along with the early works on this subject.

The INTERNATIONAL ELECTRICAL LIBRARY gives you the full benefit of the extraordinary and rapid advances of the science.

Will you continue to do yourself an injustice by neglecting to avail yourself of the unusual privilege offered to you now, and on terms that will not be a burden or tax on your income?

In placing your order for a set you are not buying a luxury, but an absolute necessity—a valuable and dividend-paying set of tools which will work out your ambition.

Special terms of payment sent on request by the publishers.

MANUFACTURE.

THE INTERNATIONAL ELECTRICAL LIBRARY is published in a style in keeping with the high merit of the work.

No expense has been spared in the paper, printing, binding, and illustrations to make the set the best scientific Library published.

Paper. The best quality of paper has been made to order for the INTERNATIONAL ELECTRICAL LIBRARY. It is extra super-calendered book, giving a high surface which shows the type and illustrations to the best advantage.

Printing. The printing on the set has been done on the most improved printing presses, from large clear-faced type, and with the greatest care, by skilled workmen.

The volumes, with the exception of the Encyclopedic Electrical Dictionary, are printed in two colors.

Engravings. Nearly 2,000 fine wood-cuts, diagram and half tone engravings appear in the set, and are shown to the best possible advantage by being printed in extra buff-tone dark green ink, the text being in black.

Binding. The sumptuous half-morocco leather binding has been selected for the INTERNATIONAL ELECTRICAL LIBRARY. Full leather backs and corners, cloth sides and gold lettering.

This binding is the most durable for repeated reference, and at the same time gives a very handsome and rich effect for library purposes.

Size. The six volumes of the INTERNATIONAL ELECTRICAL LIBRARY contain nearly 3,000 pages, with 25 folding plates additional. Each volume is 9¾ x 6½ inches and 2 inches thick. The set weighs 24 lbs., boxed.

AMERICAN TECHNICAL BOOK CO.

45 VESEY ST., NEW YORK.

W. E.

FREE COUPON.

As it is impossible to give an adequate description of the International Electrical Library in this limited space, fill in this coupon and send to us and we will send free of charge a beautiful book of nearly 100 specimen pages, printed in two colors, showing samples of text and illustrations of the six volumes of the International Electrical Library.

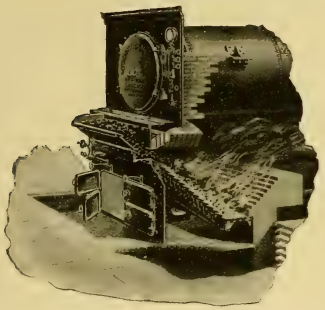
Westinghouse, Church, Kerr & Co.,

ENGINEERS.



Managers of Electric Light and Power Stations are getting more and more alert to the smaller economies in the generation of power. They are alive to the fact that their finished product is power, and therefore they install expensive boilers, efficient engines and generators, and often pay considerable attention to their steam piping; but how many who are doing all this are practically nullifying it all by improper firing? Do they not know that every time the fire door is opened it cools off the fire, wastes coal and injures their boilers?

The Roney Mechanical Stoker obviates all this, enables one to use a cheaper grade of fuel and at the same time to derive the best results from the excellent machinery which receives its power from this service.

If you would know more of this standard piece of apparatus, address:

Weston "Round Pattern" Voltmeter.

We desire to call attention to a line of **cheap** but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

"Round Pattern," Type F.

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

Mention the WESTERN ELECTRICIAN when writing

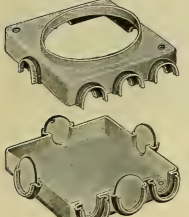
STEEL BOXES.

STEEL SPLIT BOXES FOR 5-8 CONDUIT.



NOTE the good points of this box!
NOTE that it is non-breakable!
NOTE the length of the projecting lugs!
NOTE that the inner rim of outlet is smaller than the outer!
NOTE from this that the conduit cannot run too far into box!
NOTE the removable discs!
NOTE that it weighs but 21 ounces!

If you have noted well all these good points you will have discovered the Best Split Conduit Box on the Market. Our new Catalogue "D" will tell you about our other 1,200 styles of Steel Outlet Boxes. We also manufacture Steel Boxes for Panel Boards.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

OUR COMPETITORS SAID WE WOULD FAIL. READ THE TESTIMONIALS IN LAST WEEK'S PAPERS; THEN READ THE FOLLOWING:

LACHINE RAPIDS HYDRAULIC & LAND CO., Ltd.

MONTREAL, February 25, 1898.

THE NATIONAL CONDUIT & CABLE CO., Times Building, New York, U. S. A.

Dear Sirs: We have pleasure to inform you that the paper-insulated lead-covered transmission cables that you have installed for us in your cement lined ducts, as per contract, have for some time past been carrying current from our plant at Lachine Rapids through the streets of Montreal and through the subways under Lachine Canal at Seminary Street and Cote St. Paul. We have had between 4,000 and 5,000 volts on these continually, and so far have proved very satisfactory.

We might mention that the cables crossing the canal are lying in water all the time and we have had no cause to regret the selection of your cable, and trust that the present relationship between our respective companies may still continue.

Yours faithfully,

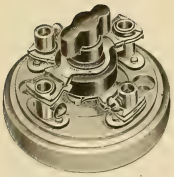
W. McLEA WALBANK, Managing Director.

WE ARE JUST AS SUCCESSFUL IN ALL KINDS OF ELECTRICAL DISTRIBUTION UNDERGROUND. WE HAVE THE LARGEST AND BEST EQUIPPED CABLE AND CONDUIT PLANT IN THE WORLD. WRITE US FOR INFORMATION.

THE NATIONAL CONDUIT AND CABLE COMPANY,

"ROOKERY," CHICAGO. **TIMES BUILDING, NEW YORK.** AMES BUILDING, BOSTON.

The Words "Hart Switch" Represent Profit to You!



Hart Switch, 10 Amp. d. p.

ALL Hart Switches have the words "Hart Switch" stamped in the metal, and this stamp is a guarantee against loss and annoyance on account of defective switches. A little probing into facts on your part will convince you that Hart Switches are the cheapest. For instance:—

How many snap switches did you buy during 1897?
How many of these were used to replace defective switches?
How many of these defective switches were stamped "Hart Switch"?
How many of the defective switches were other makes?

Hart Switches are made for active service. They are durable. You don't find them on bargain counters or in scrap heaps. It will pay you to specify Hart Switches when ordering and to make sure that you get them. Inferior switches are frequently substituted when Hart Switches are asked for.

CATALOGUE ON APPLICATION.

THE HART & HEGEMAN MFG. CO.,

HARTFORD, CONN.

REASON! WHY THE WILLARD STORAGE BATTERY IS SUPERIOR TO ALL OTHERS:

With apologies to the manufacturers of other storage batteries than the Willard, and with no desire or intention of detracting from the worth of any battery, we call attention to the construction of the Willard and invite comparison between its construction and that of others, feeling that the advantages of the Willard must be most apparent.

The Willard Plate is made of pure rolled lead sheets, from either side of which are raised at an angle of about 45 degrees thin leaves about 1-32 inch thick and about ¾ inch wide, leaving a solid sheet of lead 1-16 inch thick the full size of the plate, to which the leaves on either side are each and every one attached by the original contact the full length of the plate. The openings between the leaves are filled with peroxide of lead by electro-chemical formation.

We claim that this construction overcomes all of the faults possessed by other plates made in the past. You know the faults of the past are legion. Recall them one by one and apply them to the Willard plate and observe how completely they are overcome. Possibly the greatest advantage of the Willard plate over all other designs of plate lies in its provision for expansion. As the active material expands the thin leaves are opened, thus making the plate thicker to whatever degree the active material expands. You know how universally this failure to provide for expansion exists in other plates and also the dire consequences of the same. In fact, this is a great factor in extending the life of the Willard far beyond that of other plates. While the expansion in other plates is busily engaged in forcing the active material out of the recesses that hold it, breaking the grid, bending the plates, tearing away the heavy horizontal shelves that confine it or shattering to atoms the porcelain or metal receptacles that encompass it, the Willard Plate, free from this multitude of troubles, pursues the even tenor of a long useful life, giving daily its original capacity until, as we verily believe, it has several times outlived its neighbors. In fact, from exhaustive experiments we have made and from the condition of the plates that have been in use two, three, four and five years we can hardly imagine where the end will be. We will be pleased to hear any criticism that can be made as to the construction of the Willard Plate, as in the presentation of the Willard Plate we have yet to find an objection that can be successfully urged against it. But hold—a competitor urges that the Willard Plate is not sufficiently strong. But the answer to this is the scientific fact that the ultimate tensile strength of a cross section of our smallest plate—5 in. × 7 in.—is 625 pounds, while the weight of the plate is but three pounds. Our larger plates are of course of corresponding strength.

Remember, we stand ready to furnish for test purposes a cell of any size at one-half our lowest net price.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY,
CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

BADT HERMETIC CELL.

TRADE MARK.

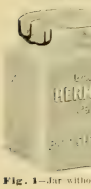

Fig. 1—Jar without cover.

EXPENSIVE in First Cost, BUT CHEAP in the Long Run.

U. S. PATENT FEB. 9, 1897. (OTHER PATENTS APPLIED FOR.)

AN AIR-TIGHT Open-Circuit Cell with Oil Seal and with Oil Insulation.

No evaporation, no creeping of salts, no leakage of electricity, no premature disintegration of zincs, no trouble of any kind, no attention, no attendance, no repair bills.

It is the **best Open-Circuit Battery** for domestic, telephone and similar purposes ever offered.

It will save its first cost in a short time, by making **inspection, attendance** and **repairs** unnecessary.

With pure materials the cell will remain operative until the last fragment of zinc is dissolved. Under **average** conditions the cell will give **at least four years' service, without the necessity of ever touching it.**

THE HERMETIC CELL is constructed on correct scientific principles and is the result of long practical experience.

PRICES:

Cell No. 1, complete.....$1.25 | Cell No. 2, complete.....$1.00

Subject to discount according to quantity contracted for. Liberal discount to the trade.

WANTED.

Salesman for Electrical Work.

A permanent position offered by a large manufacturing company for a first class salesman on electrical apparatus. The position offers a large opportunity for an ambitious man of the first class. A technical training and a considerable knowledge of electrical engineering are necessary. Preference will be given to a man who can secure business immediately. In replying give full information covering the following headings: Age, education, business experience in detail, amount of business successfully handled, salary expected, state whether married or single, give five references. Address "**X. Y.**," care WESTERN ELECTRICIAN, 510 Marquette Building, Chicago.

WANTED.

Electrician who is thoroughly competent to design modern multipolar motors and dynamos. Must be good draughtsman. Address "**Motor.**" care WESTERN ELECTRICIAN, 510 Marquette Building, Chicago.

WANTED.

A thoroughly competent man to take charge of the armature and field winding department of one of the leading electrical companies. With application state experience, what wages would be expected and also if now engaged in this work. Address "**Armature.**" care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

$100 MAN WANTED.

We wish to secure the services of a good engineer and electrician for night run. Send 10c. in stamps for application papers, etc. Place must be filled within thirty days. Address **E. H. P. Co.**, 1139 Hamilton Street, Cleveland, Ohio.

SITUATION WANTED.

By electrician and engineer of seven years' experience, technical education; capable of taking charge of construction work or operation of a plant; familiar with the management of dynamos, high speed and Corliss engines and the use of the indicator. Good recommendations from prominent parties. Address "**H H.**," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

POSITION WANTED.

By young man 30 years of age, as superintendent of electric light plant or electric street railway. Has had 10 years experience as superintendent. At present superintendent of electric light plant in the East. Wishes to make a change. Understands all systems. Best of references from present and past employers. Correspondence solicited. Address "K ," care WESTERN ELECTRICIAN, 510 Marquette Bldg , Chicago.

POSITION WANTED.

An electrical engineer of 14 years' experience wants position as superintendent or chief engineer of power station, or as superintendent of construction or erection of plants; long experience in managing large storage battery installations; also as municipal electrical inspector. Am a practical machinist and steam engineer. Best of references. Address "**Megohm.**" care WESTERN ELECTRICIAN, 510 Marquette Bldg , Chicago.

WANTED.

ARMATURES TO REWIND.

Winders direct from T.-H. and Westinghouse shops. Work guaranteed. Ten years' experience. Light plants installed complete. Send for prices.

PROPOSALS

FOR

Arc Lamp Posts on Humboldt Boulevard.

CHICAGO, March 14, 1898.

Sealed proposals will be received by the West Chicago Park Commissioners, at office Union Park, until 4 o'clock p. m. of Tuesday, March 22, 1898, for

Furnishing and Setting 162 Iron Arc Lamp Posts on HUMBOLDT BOULEVARD,

in accordance with plans and specifications on file in the office of the Engineer of said Park Commissioners in Union Park.

Proposals must be made out upon blank forms to be obtained at said office, be addressed to "West Chicago Park Commissioners," indorsed "Arc Lamp Posts," and must be accompanied with currency to the amount of 5 per cent of bid or certified check for the same amount drawn on a responsible bank doing business in the city of Chicago and made payable to the order of the West Chicago Park Commissioners.

The contractor to whom this work may be awarded will be required to furnish a bond in a sum equal to one-half the amount of contract, with sureties acceptable to said Park Commissioners.

No proposal will be considered unless the party submitting it shall furnish evidence satisfactory to the West Chicago Park Commissioners of his or their ability and that he or they have the necessary facilities, together with sufficient pecuniary resources, to fulfill the conditions of the contract.

The West Chicago Park Commissioners reserve the right to reject any or all bids.

JOSEPH W. SUDDARD, President.
Attest: ERNEST G. SCHUBERT, Secretary.

FOR SALE

A complete street lighting plant to operate 250 24 c. p. series incandescent lamps, consisting of one 12x12 Ideal engine, nearly new; one I. B. Davis pump, No. 2; one Berryman heater, 150 h. p; two Mather series-wound dynamos, capacity 125 24 c. p. lamps each, together with shafting, pulleys, switchboards, etc., will be sold in whole or in part; also two 125 h. p. Westinghouse automatic engines, in use less than a year; one 75 h. p. Westinghouse Junior engine, in use less than a year; one horizontal 14x42 Corliss, 75 h. p., in good order. The above will be sold at a bargain, as the company have no further use for same. Address

Construction of Telephone Exchanges —and Toll Lines

. . . . . By the **HAWKEYE TELEPHONE CONSTRUCTION COMPANY,** saves you money on the first cost of your plant and insures your subscribers

First-Class Service at a Low Cost of Maintenance.

To successfully compete with the Bell monopoly, you must furnish the best service possible. We will construct your exchange complete, from conduits and poles to switchboards and telephones, or will install either the central office or outside system separately. We will operate plants constructed by us, for thirty, sixty, or ninety days, in order to give you satisfactory proof that our work, which will be done under the personal supervision of C. W. BARTLETT, is of the very best. If you are now operating a telephone exchange, and have defective cables, switchboards or telephones, write us fully as to the nature of the trouble, and we will endeavor to assist you in locating the same, free of charge.

Estimates furnished for Switchboards, Telephones, Toll Lines, overhead and underground systems, in part or complete.

Write for all particulars.

CREOSOTED WOOD CONDUITS

FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

Proprietor.

The Lockwood Transmitter

Is protected by letters patent No. 528640 and No. 557588, issued Nov. 6, 1894, and April 7, 1896, respectively.

The electrodes have "A variable air space" between them, and the adjustment is obtained by tension instead of pressure. The Lockwood is positively the only Transmitter on the market having no contact BETWEEN electrodes, consequently parties liable to infringement suits and promoters of long-distance systems will find it to be the only telephone that will satisfy the fears of their subscribers. The Transmitter can be placed upon any instrument now in use, and an exchange of Transmitters is easily effected.

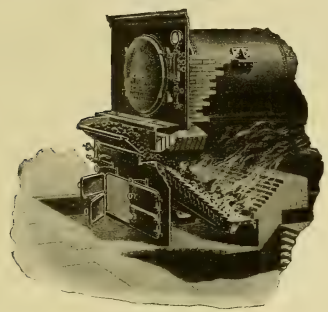
Westinghouse Machine Company,

MANUFACTURERS.

Westinghouse, Church, Kerr & Co.,

ENGINEERS.



Managers of Electric Light and Power Stations are getting more and more alert to the smaller economies in the generation of power. They are alive to the fact that their finished product is power, and therefore they install expensive boilers, efficient engines and generators, and often pay considerable attention to their steam piping; but how many who are doing all this are practically nullifying it all by improper firing? Do they not know that every time the fire door is opened it cools off the fire, wastes coal and injures their boilers?

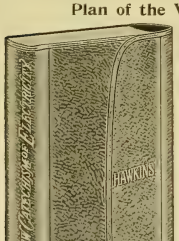
The Roney Mechanical Stoker obviates all this, enables one to use a cheaper grade of fuel and at the same time to derive the best results from the excellent machinery which receives its power from this service.

If you would know more of this standard piece of apparatus, address:

NEW YORK, 26 Cortlandt St. BOSTON, Westinghouse Bldg.
CHICAGO, 171 La Salle St. DETROIT, Union Trust Bldg.
PHILADELPHIA, M. R. Muckle, Jr. & Co., Drexel Bldg.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



The New Catechism of Electricity will be found to be surprisingly plain, and free from needless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive look has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management; all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 75 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

Absolutely Non-Infringing. Protection Guaranteed.
AMERICAN BATTERY CO.,
EST'D 1888. 174 S. Clinton St., Chicago, Ill.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,
As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 546,261, Sept. 10, 1895; No. 546,262, Sept 10, 1895; No. 565,053, Aug. 4, 1896; No. 565,175, Aug. 4, 1896; No. 565,188, Aug. 4, 1896; No. 565,217, Aug. 4, 1896; No. 565,410, Aug. 4, 1896; No. 594,034, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,381, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

MONTAUK MULTIPHASE CABLE CO.
American Surety Building Rooms 9-10-11-18th Floor, 100 Broadway, New York.

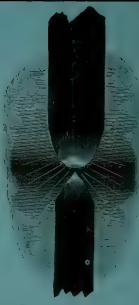
"SHIP" CARBONS



NOTICE:

The trade is informed that the Carbon Works of Julius Fuchs in Nuernberg is controlled solely by SCHIFF, JORDAN & COMPANY, and the products of this world-renowned works now bear only our trade-mark, "SHIP CARBONS."

Carbons offered under any other trade-mark represented to be the product of the Carbon Works of Julius Fuchs are bogus and a fraud upon the public.

These carbons have heretofore been sold extensively by an importer under another mark, and, to avoid an inferior article, see that every carbon is stamped

"SHIP CARBON VIENNA-NUERNBERG."

Trade Mark.

The Quality has not been Changed, only the Trade-Mark. Don't be deceived.

We having received a very large shipment of

CORED CARBONS

Just before the new tariff went into effect, are prepared to make very low prices on the following sizes: 5-8 in. by 10 in. and 12 in. and 19-32 in. by 9 1-2 in.

Chicago Edison Company,

General Western Agents, 139 Adams Street, Chicago.

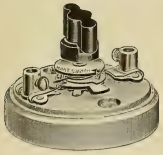
The American Electric Meter Co.,

9th St. and Montgomery Ave., Philadelphia, Pa.,

Is now prepared to take orders for early delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is magnetically shielded.
This meter is direct reading, having no multiplier.
This meter does not require one-thousandth of a horse power.
This meter will operate for years without opening.
This meter has no springs, jewels or frictional errors.
This meter once right is always right.

Hart 5-Ampere Single Pole Switch.



NO. 20.

Central station managers and others to whom the constant breaking of 5-ampere switches is a source of annoyance and expense, will find that this switch comes up to their most exacting requirements.

Your supply house carries a full stock of Hart Switches and can fill orders without delay.

THE HART & HECEMAN MFG. CO.,
HARTFORD, CONN.

CREOSOTED WILL LAST FOR MANY YEARS.
IT PAYS TO USE THEM.
—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LICHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,

As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 546,261, Sept. 10, 1895; No. 546,262, Sept. 10, 1895; No. 565,053, Aug. 4, 1896; No. 565,178, Aug. 4, 1896; No. 565,188, Aug. 4, 1896; No. 565,217, Aug. 4, 1896; No. 565,410, Aug. 4, 1896; No. 594,034, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,281, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

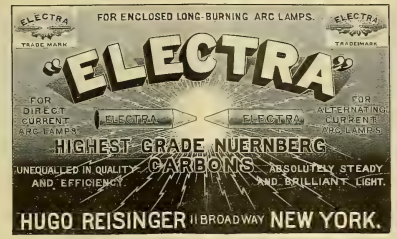
GOOD CARBONS MEAN LESS COST FOR CURRENT. Therefore, wherever a highly efficient service is desired, it is of the utmost importance to use the best Carbons obtainable.



"All the excellence in dynamos and arc lamps counts for but little, when poor Carbons are used in the lamps."

NOTICE:—The "Electra" Highest Grade Nuernberg Carbons are, as heretofore, manufactured by the world-renowned firm of **C. Conradty,** of Nuernberg, who owns both the oldest and largest carbon works in existence. See that every package of what are sold you as the "Electra" Carbons, bears a label with my trade mark, "ELECTRA," and thus avoid the use of inferior carbons offered to you under the name "ELECTRA." Infringers of my trade mark will be rigidly prosecuted to protect the purchasers of my carbons.

New Dynamo Tenders' Hand-Book.
By F. B. BADT.
226 Pages. 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders Hand-Book sold, and over 5,000 of the new.

Electrician Publishing Co.,
510 Marquette Building, CHICAGO.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

THE "CLARK" WIRE.

FOR SWITCHBOARD, RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

EASTERN ELECTRIC CABLE COMPANY,

WE OFFER

a most durable and highly satisfactory conductor called

BI-METALLIC WIRE!

which is composed of copper and steel—steel center with solid copper surrounding it. This wire has greater conductivity for equal strength than any wire on the market, its resistance being about 35 per cent greater than that of solid copper wire of equal diameter. It is, therefore, adapted to all line uses and is

CHEAPER THAN COPPER.

WANTED.
Salesman for Electrical Work.

A permanent position offered by a large manufacturing company for a first class salesman on electrical apparatus. The position offers a large opportunity for an ambitious man of the first class. A technical training and a considerable knowledge of electrical engineering are necessary. Preference will be given to a man who can secure business immediately. In replying give full information covering the following headings: Age, education, business experience in detail, amount of business successfully handled, salary expected, state whether married or single, give five references. Address "X. Y." care WESTERN ELECTRICIAN, 510 Marquette Building, Chicago.

WANTED.

Position in electric light plant; ten years' experience; competent to install or take charge of plant. Will refuse no good offer; good references. Address A. F. IDE, care A. L. Ide & Sons, Springfield, Ill.

WANTED.

A thoroughly competent man to take charge of the armature and field winding department of one of the leading electrical companies. With application state experience, what wages would be expected and also if now engaged in this work. Address "Armature," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

WANTED.

By an experienced man, situation in electric light or power plant; have had ten years' experience with steam and electricity and am now in charge of a plant but wish a change. Address "Power Plant," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

WANTED.

A man fully competent to continue the installation and maintenance of a telephone exchange numbering over 400 subscribers may obtain a position in the South, by immediately applying with references as to character, responsibility, competency, past employers, and naming a reasonable rate at which willing to undertake the work. Position permanent if services satisfactory. Address "K. K.," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

WANTED.

Electrician and superintendent to take full charge of fully equipped plant in the manufacture of dynamos, motors, etc.; one who will take moneyed interest only need apply. Address "S," 28 Sidney St., Brooklyn, N. Y.

SITUATION WANTED.

By electrician and engineer of seven years' experience, technical education, capable of taking charge of construction work or operation of a plant; familiar with the management of dynamos, high speed and Corliss engines and the use of the indicator. Good recommendations from prominent parties. Address "H. H.," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

POSITION WANTED.

By young man 30 years of age, as superintendent of electric light plant or electric street railway. Has had 10 years' experience as superintendent. At present superintendent of electric light plant in the East. Wishes to make a change. Understands all systems. Best of references from present and past employers. Correspondence solicited. Address "K.," care WESTERN ELECTRICIAN, 510 Marquette Bldg., Chicago.

WANTED.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magneto Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magneto Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Naumayer and Gotzher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The "solid-back" Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
Appendix.

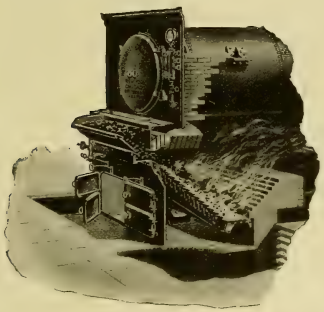
Westinghouse, Church, Kerr & Co.,
ENGINEERS.



Managers of Electric Light and Power Stations are getting more and more alert to the smaller economies in the generation of power. They are alive to the fact that their finished product is power, and therefore they install expensive boilers, efficient engines and generators, and often pay considerable attention to their steam piping; but how many who are doing all this are practically nullifying it all by improper firing? Do they not know that every time the fire door is opened it cools off the fire, wastes coal and injures their boilers?

The Roney Mechanical Stoker obviates all this, enables one to use a cheaper grade of fuel and at the same time to derive the best results from the excellent machinery which receives its power from this service

If you would know more of this standard piece of apparatus, address

THE McCORMICK TURBINE.

On Vertical or Horizontal Shaft, Especially Adapted for Electrical Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with us, **as we are willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH CO., York, Pa.

Estimates furnished for complete power plants and results guaranteed.

ELECTRICITY AND MAGNETISM.

A series of thirty-four lessons covering the Science of Electricity from its Fundamental Principles to its Everyday Practical Application. Comprises 325 pages, over 300 diagrams and illustrations. Price $2. By

PROF. D. C. JACKSON, University of Wisconsin.
PROF. H. S. CARHART, University of Michigan.
PROF. B. F. THOMAS, University of Ohio.
PROF. WM. A. ANTHONY, of New York.
PROF. BROWN AYRES, Tulane University.
PROF. A. C. PERRINE, Leland Stanford University, Cal.
PROF. GEO. D. SHEPARDSON, University of Minn.,
A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood. And others.

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action (continued).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltmeters.
10. Measurement of electrical resistance.
11. Everyday measurements of electric currents and pressures.
12. Everyday measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic deposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (continued).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

The Ferris Wheel Co.
1131 The Rookery,
Chicago, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago. Ill.

Gentlemen:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By T. V. Rice, Mgr.

Pole Arrester, Wooden Cover.

GARTON-DANIELS ELECTRIC CO., KEOKUK, IA.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,

As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 546,261, Sept. 10, 1895; No. 546,262, Sept 10, 1895; No. 565,055, Aug. 4, 1896; No. 565,178, Aug. 4, 1896; No. 565,183, Aug. 4, 1896; No. 565,217, Aug. 4, 1896; No. 565,410, Aug. 4, 1896; No. 594,034, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,281, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

CROSS ARMS

CREOSOTED WILL LAST FOR MANY YEARS.
IT PAYS TO USE THEM.
—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS

FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

The Lockwood Transmitter

Is protected by letters patent No. 528640 and No. 557588, issued Nov. 6, 1894, and April 7, 1896, respectively.

The electrodes have "A variable air space" between them, and the adjustment is obtained by tension instead of pressure. The Lockwood is positively the only Transmitter on the market having no contact BETWEEN electrodes, consequently parties liable to infringement suits and promoters of long-distance systems will find it to be the only telephone that will satisfy the fears of their subscribers. The Transmitter can be placed upon any instrument now in use, and an exchange of Transmitters is easily effected.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magneto Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens Kotyra Neumayer and Stritcher Receivers.

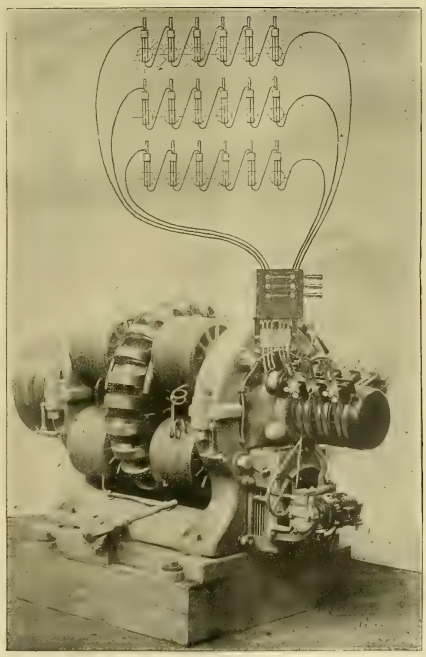
Pittsburg, Pa., 502 Tradesman's Bank Building.

Many stations have exchanged all their small units for large Brush arc dynamos. Among them are the Brooklyn-Citizens, with 3,360 lights' capacity; Brooklyn-Municipal, 1,200; Newark, 3,000; Cleveland, 1,800; Philadelphia, Brush, 1,500; Philadelphia-Northern, 1,300; Buffalo, 4,250; Worcester, 1,000; Toronto, 900; Quebec, 625; Harrisburg, 750; Erie, 750; Albany, 500; Troy, 500; Paterson, 625; City of Chicago, 700; John Wanamaker, 625; Carnegie Steel Co., 500; U. S. Elec. Ltg. Co, Washington, 1,000; Edison Elec. Co., New Orleans, La., 2,250; United Elec. Lt. Co., Malden, Mass., 720; Manchester Elec. Co., Manchester, N. H., 500; Reading, Pa., 500; Boston, Mass., 660; Kings Co. Elec. Lt. & Pr. Co., Brooklyn, N. Y., 625; Cambridge Elec. Lt. & Pr. Co., Cambridge, Mass., 720; Rockford Ill, 625.



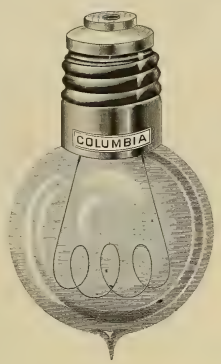
BRUSH MULTI-CIRCUIT 125-LIGHT ARC DYNAMO—1898.

Over 60,000 lights' capacity in large Brush arc dynamos sold. A large proportion of them using Multi-Circuit Dynamos.

The newly designed Brush dynamos have the following capacities: 55, 80, 100, 125, 240, 300, 2,000 candle power lights; 45, 85, 120, 160, 1,200 candle power lights.

Brush arc lamps were first used in 1877. More of them being sold to-day than ever before.

Two or more separate circuits run direct from one dynamo with any distribution of load on the different circuits. The advantages are absolute flexibility in handling of circuits; reduction of high voltages on circuits run from large dynamos; use of large units with corresponding increase of efficiency; saving in floor space, oil, belts, shafting, pulleys, attendance.



Incandescent Lamps...

COLUMBIA

Unequaled ...in Quality

BEFORE renewing your annual contracts for Incandescent Lamps we request you to make a test of the ***Columbia.*** We believe you will find it the most uniform in candle-power and in consumption of energy. The candle-power is well sustained, therefore the lamps do not grow yellow with age. They furnish the most economical means of transforming electrical energy into light, and large savings may be made by their adoption.

We request correspondence with those desiring lamps for immediate requirements or for future delivery.

Special prices for annual requirements.

For Canada address Canadian General Electric Company, Toronto, Can.

NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils eliminate self induction from the lines so far as dynamo current is concerned.

Correspondence solicited.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

For Ceiling or Desk. A Written Guarantee with each FAN.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,

As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 540,261, Sept. 10, 1895; No. 540,262, Sept 10, 1895; No. 565,053, Aug. 4, 1896; No. 565,178, Aug. 4, 1896; No. 565,188, Aug. 4, 1896; No. 565,217, Aug. 4, 1896; No. 565,410, Aug. 4 1896; No. 594,003, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,281, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

For Classified Index of Advertisements See Page VI.

F. HARDTMUTH & CO., VIENNA, AUSTRIA.

We having received a very large shipment of

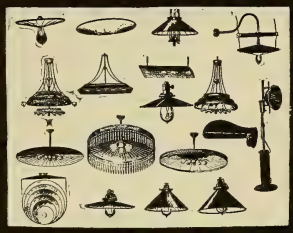
CORED CARBONS

Just before the new tariff went into effect, are prepared to make very low prices on the following sizes: 5-8 in. by 10 in. and 12 in. and 19-32 in. by 9 1-2 in.

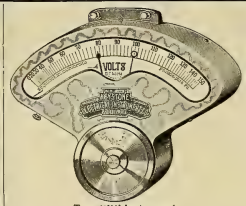
Chicago Edison Company,

General Western Agents, 139 Adams Street, Chicago.

WRITE FOR ILLUSTRATED CATALOGUE



AMERICAN REFLECTOR & LIGHTING CO.
CHICAGO.



Type "K" Instrument.

Keystone Electrical Instrument Co.

Switchboard Voltmeters, Ammeters, Ground Detectors and Differential Voltmeters.

We meet all the requirements of modern Central Stations or Isolated Plants, whether using direct or alternating current circuits.

Our instruments are constant and durable, sensitive and accurate, pleasing in appearance and always correct.

We can interest you in prices and other details if you will write to

Ninth Street and Montgomery Avenue, Philadelphia.
New York, 15 Cortlandt Street.
Chicago, 414 Ashland Block.

The American Electric Meter Co.,

9th St. and Montgomery Ave., Philadelphia, Pa.,

Is now prepared to take orders for early delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is magnetically shielded.
This meter is direct reading, having no multiplier.
This meter does not require one-thousandth of a horse power.
This meter will operate for years without opening.
This meter has no springs, jewels or frictional errors.
This meter once right is always right.

National No. 2 Carbon Porous Cup Cell.

Note the construction of this Cell.

It is the best Cell for telephone use.

Don't take our word for it, but try a few.

Beware of imitations; insist on having the National No. 2.

SEND FOR OUR ILLUSTRATED LIST OF BATTERY MATERIAL.

DIEHL MANUFACTURING CO.,
ELIZABETHPORT, N. J.

BUYERS will find no better or more honestly made goods than those of the **K. & W. Company** of Pittsfield, Mass. Their Hardy Incandescent Lamp is justly celebrated for its sustained candle power. Their Arc Hanger Board—an absolute cut out—is a model of workmanship and design. Their Dynamo Brush is a cool and quiet runner, and their Commutator Compound does prevent sparking. They have a **New York Office** at **120 Liberty Street**, and their Western representatives are **Meysenburg & Badt, 1504 Monadnock Block, Chicago.** Their prices are moderate and parties wishing agencies will do well to communicate with them.

W. E. 1898 FAN

W. E. 1898. 12-in. Desk Fan Motor.

MOTORS,

Made for 110, 220 and and 500 volts. Every motor tested at twice its rated voltage.
Every motor guaranteed.
Efficient and Durable.
Ceiling Fans, Column Fans, Desk Fans, Bracket Fans.
SEND FOR CATALOG 10 in. by 7 in.; 36 pages complete description of fans, with illustrations.

SPRAGUE ELECTRIC CO.,

Twenty Broad Street,

NEW YORK CITY.

Can I Become An Electrical Engineer?

This question has been put repeatedly by thoughtful and ambitious thousands.
We have been urged again and again

TO DO SOMETHING FOR THOSE WHO—OUTSIDE OF COLLEGE—SEEK AN ELECTRICAL ENGINEERING EDUCATION.

These accumulating requests demanded recognition—they rose to the nature of a command. We now respond to them publicly after having—during the past two years—been engaged in elaborate preparations to fully meet this need of the times. The work is now consummated, and we take pleasure in announcing herewith

THE INAUGURATION OF

The Electrical Engineer Institute of Correspondence Instruction,

the organization of which is based on a new and carefully worked out

Our Principles:

1. To help those who lack education.
2. To make it possible—by a system of easy payments—for the poorest to obtain a first-class technical education.
3. To grant to anyone instruction, irrespective of age or previous education.
4. To allow the student unlimited time in which to complete his course.
5. To make every student a class by himself, so that the quick learner may not be held back, nor the dull student left behind.
6. To enroll any student at any time—instruction beginning at once.
7. To furnish the student—without extra charge—all our text-books required throughout his course.

SYSTEM OF HOME INSTRUCTION BY CORRESPONDENCE.

This INSTITUTE is fostered and upheld by

The Electrical Engineer,

a journal of recognized authority in matters electrical both here and abroad.

THE GUARANTEE OF THE ELECTRICAL ENGINEER CAN BE RELIED UPON.

(Refer to anyone connected with the electrical industry.)

The Electrical Engineer Institute of Correspondence Instruction offers to the ambitious youth, as well as to the practicing engineer, education in his profession or improvement therein as his requirements may demand. Our aim is to assist those who lack education, and to make it possible for them to acquire such training.

What We Will Do For Our Students:

1. We will grant you most generous terms to pay for your tuition.
2. We will allow you to sell your course or transfer it at any time.
3. If at any time you are short of funds we will grant you extensions of time in which to pay.
4. We will allow you to drop your course and take it up again at any future time without additional charge.
5. We will furnish you at all times with technical information on any subject.
6. We desire to be regarded not alone as the instructors, but also as the advisers of our students.
7. We will aid you in every way we can to become a successful engineer.

At an Insignificant Cost—
Payable in Installments of **$2.00 Per Month.**

THE FOLLOWING IS A PARTIAL LIST OF ELECTRICAL SUBJECTS TAUGHT IN THE VARIOUS COURSES OF

The Electrical Engineer Institute of Correspondence Instruction:

1. PRINCIPLES OF ELECTRICITY AND MAGNETISM.
2. LABORATORY INSTRUMENTS AND MEASUREMENTS.
3. CONTINUOUS CURRENT GENERATORS AND MOTORS.
4. PRINCIPLES OF THE ALTERNATING CURRENT.
5. ALTERNATING CURRENT GENERATORS.
6. TRANSFORMERS AND POLYPHASE MOTORS.
7. TRANSMISSION OF ELECTRICITY.
8. ELECTRIC BELL WORK.
9. ELECTRIC LIGHTING.
10. ELECTRIC RAILWAYS.
11. ELECTRIC MINING.
12. ELECTRIC HEATING.
13. ELECTRIC WELDING.
14. TECHNICAL INSTRUMENTS AND MEASUREMENTS.
15. ELECTRO-CHEMISTRY.
16. ELECTRO-PHYSICS (including X-ray work.)
17. PRIMARY AND SECONDARY BATTERIES.
18. ELECTRO-METALLURGY.
19. TELEGRAPHY.
20. TELEPHONY.
21. ELECTRIC SIGNALING (RAILROAD, MARINE, ETC.)
22. DESIGN OF SWITCHBOARDS AND SWITCHBOARD INSTRUMENTS.
23. ISOLATED PLANTS AND CENTRAL STATIONS (including their working.)
24. DESIGN OF CONTINUOUS CURRENT GENERATORS AND MOTORS.
25. DESIGN OF ALTERNATING CURRENT GENERATORS AND MOTORS.
26. DESIGN OF TRANSFORMERS AND POLYPHASE MOTORS.
27. ALTERNATE CURRENT WORKING IN GENERAL (including Polyphase Work.)
28. ELECTRO-THERAPEUTICS (In preparation.)

We have in preparation **complete courses in all the other engineering and industrial sciences.** A later announcement will state the opening of these courses. We shall be pleased to receive communications from interested parties.

REQUIREMENTS FOR ADMISSION: Nothing more than the ability **to read** and **to write. Our Elementary Courses begin with Simple Arithmetic. Unlimited time granted the student to complete his course.** Instruction continues—when a course has been paid in full—without extra charge until the student has acquired a diploma or certificate of proficiency or until he voluntarily resigns.

Visit us, or write us freely, stating the particular subjects in which you desire instruction, and we shall be pleased to answer fully. All communications to us are regarded as strictly confidential.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

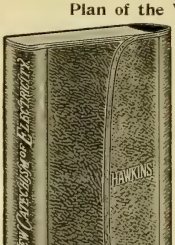
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages, by means of this index a thousand items of practical import are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo, Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room, Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICITY AND MAGNETISM.

A series of thirty-four lessons covering the Science of Electricity from its Fundamental Principles to its Everyday Practical Application. Comprises 325 pages, over 300 diagrams and illustrations. Price $2. By

PROF. D. C. JACKSON, University of Wisconsin.
PROF. H. S. CARHART, University of Michigan.
PROF. E. F. THOMAS, University of Ohio.
PROF. WM. A. ANTHONY, of New York.
PROF. BROWN AYRES, Tulane University.
PROF. A. C. PERRINE, Leland Stanford University, Cal.
PROF. GEO. D. SHEPARDSON, University of Minn.
And others.

A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood.

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action (concluded).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltameters.
10. Measurement of electrical resistance.
11. Everyday measurements of electric currents and pressures.
12. Everyday measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic deposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (concluded).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

The Cabinet Manufacturing Company,

Formerly of ASHTABULA, OHIO,

Are now installed in their new and modern plant at Steubenville, Ohio, and with the recent change in management promise you and every customer the finest of goods with promptness of fulfillment and the pleasantest of business relations.

Telephone Woodwork

In all its branches is our specialty. Specifications and trial orders solicited. Samples furnished.

The Cabinet Mfg. Co.,

STEUBENVILLE, OHIO.

Please send all correspondence to the company.

NO. 30 AMERICAN TRANSMITTER.

This Instrument, for volume of voice transmission, distinctness of articulation, exact reproduction of articulate sounds and durable qualities is unequaled.

The Largest Manufacturers of Telephones and Switchboards in the United States.

Four hundred exchanges aggregating 80,000 telephones in use. Four years' service.

Write for catalogue showing new types and prices.

WE GUARANTEE Workmanship, material and efficiency of our apparatus to be of the *highest grade*, and agree to defend, at our own expense, any action at law which may be brought against OUR PATRONS on alleged infringement of patents owing to the use of our instruments.

American Electric Telephone Co.,

CHICAGO.

CONSTRUCTION OF TELEPHONE EXCHANGES....

BY THE HAWKEYE TELEPHONE CONSTRUCTION COMPANY, saves you money on the first cost of your plant and insures your subscribers FIRST-CLASS SERVICE, at a LOW COST OF MAINTENANCE. We will construct your Exchange complete, from conduits and poles to switchboards and telephones, or will install either the Central Office or outside system separately.

If you are now operating a Telephone Exchange, and have defective cables, switch-boards, or telephones, write us fully as to the nature of the trouble, and we will endeavor to assist you in locating the same, free of charge.

Estimates furnished for **Switch-boards, Telephones, Toll Lines, over-head and under-ground systems, in part or complete.** Write for all particulars.

Hawkeye Telephone Construction Co.,

DES MOINES, IOWA, 307, 308, 310 OBSERVATORY BUILDING.

CROSS ARMS

CREOSOTED WILL LAST FOR MANY YEARS.
IT PAYS TO USE THEM.
—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS

FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LICHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

All of our telephones are equipped with a Solid Back Transmitter, identical in principle with that utilized by the American Bell Telephone Co. for transmitting articulation a distance of 2,000 miles.

Send for prices and mention this paper.

THEY STILL USE IT.

Stover Bicycle Manufacturing Co.

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.
Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

IT COSTS SO LITTLE AND WORKS SO WELL

Cost per week: 10 to 40 h. p., 25c.; 40 to 80 h. p., 37½c.; 80 to 120 h. p., 50c.; 120 to 160 h. p., 62½c.; 160 to 200 h. p., 75c.

The Boiler Expurgator Co., MANUFACTURERS, CHICAGO, U. S. A.

NOT A PARTICLE OF OIL REACHES EXTERIOR of ENGINE or foundation.

Ready access to any part of bed for examination or adjustment without removal of a single screw.

SKINNER ENGINE CO., - ERIE, PA.

The Westinghouse Machine Company, Manufacturers.

Westinghouse, Church, Kerr & Company, Engineers.

We believe that we represent a combination of **manufacturing facilities** and **engineering experience** capable of giving the most efficient service to those interested in the generation of power—steam, gas or electric.

AS ENGINEERS **Designing and supervising or contracting.** We install steam plants, electric plants, ice and refrigerating plants, boiler plants, mechanical draft apparatus, economizers, etc., complete, or overhaul and remodel existing plants.

We are "first hands" on most of the important items entering into such plants and have enviable connections with the best manufacturers of all other standard goods or specialties.

We have done work in all parts of the country, and for every conceivable kind of service, so that it is a matter of expert knowledge rather than opinion with us, to what extent local conditions determine or limit the value of any special form of apparatus entering into the construction of a power plant.

While not underrating the economy that makes attractive figures on paper, we look out especially for **commercial economy** the sort that puts dollars in the bank.

We are as zealous of our reputation as engineers as of our reputation as manufacturers, and all our work is **backed up by unquestioned responsibility.**

C. W. PHIPPS, 229 Havemeyer Bldg., New York, N. Y.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,

As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 546,261, Sept. 10, 1895; No. 546,262, Sept 10, 1895; No. 565,053, Aug. 4, 1896; No. 565,178, Aug. 4, 1896; No. 565,188, Aug. 4, 1896; No. 565,217, Aug. 4, 1896; No. 565,410, Aug. 4, 1896; No. 594,034, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,281, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

MONTAUK MULTIPHASE CABLE CO.

American Surety Building Rooms 9-10-11, 10th Floor, 100 Broadway, New York.

Telephone, 4031 Cortlandt.

OFFICERS.
JOHN D. GOULD, Prest. C. W. PRICE, Vice-Prest.
CHAS. A. HANSON, Treas. and Secy.

FACTORY: East 25th Street, New York.

"SHIP CARBONS"

Made in NUERNBERG and VIENNA.

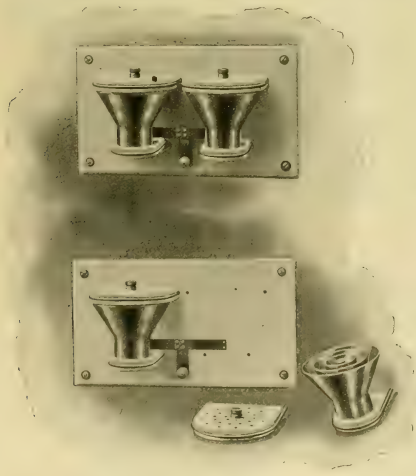
CLONIC — IT NEVER DISAPPOINTS

.....Chicago.



NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

"A Work of Art"

IS THE JUDGMENT OF EVERYONE
WHO HAS SEEN OUR 1898

Lundell Fan Motor Catalogue.

Its cover is in vermilion and gold, of special design, and its text pages fulfill the promise of the cover, beautifully illustrated as they are with half-tone vignettes, and superlatively printed upon heavy plate paper. It is the FINEST CATALOGUE OF THE SEASON, and it shows the best line of Fan Motors in the world. Everybody directly interested, should possess a copy, and may, by addressing....

CATALOGUE BUREAU

SPRAGUE ELECTRIC CO.,

Twenty Broad Street,

NEW YORK CITY.

Prof. Edwin J. Houston is a teacher of undisputed ability. He is even more than a teacher, because the pages he has inscribed teach their lesson directly and effectively. There are many that write, but few of those that write truly teach and impart the spirit and subject-matter of the work in a way that inspires the reader to further efforts. Prof. Houston is a man of the caliber who teaches from his writings. For many years his reputation has been so wi-espread that to merely mention his name in connection with any scientific achievement was to make the same worthy of respect and consideration. He is a fluent, simple and effective writer.

Dr. Arthur E. Kennelly is an electrical engineer of the highest standing. His varied experience, and his keen insight into scientific facts, have placed him among the best known representatives of electrical progress. For more than twenty years he has devoted himself persistently to the electrical science. A great deal of laboratory information, many important electrical laws, and certain rapid and effective methods were discovered by him.

Prof. Silvanus P. Thompson is regarded by all critics as the greatest writer on electro-technics known to electrical engineers. His remarkable genius in this direction manifested itself many years ago, when the science of electricity was just budding and little was known that was not arbitrary, empirical, and in many respects useless, as a means of further progress. There were many threads to be gathered up, composing the tangled skein of electrics, and it required a discerning eye, an analytical mind, and a broadness of comprehension rarely met with, to weave together these broken threads of fragmentary experience and disconnected thought.

A NEW DEPARTURE!

An Electrical..... Engineering Department,

Open Free of Charge to Subscribers only of the

"International Electrical Library,"

Has been instituted by the publishers.

It is a system whereby free educational coupons are delivered with the set of books to the subscribers. These coupons are sent in by mail to the publishers any time technical information is desired, and are promptly answered by a competent electrical engineer and a corps of skilled assistants.

The advantages of this plan to practical men are without exception greater than those ever offered by anyone associated with the art of publishing.

This unique relationship existing between the purchaser of the "INTERNATIONAL ELECTRICAL LIBRARY" and the publisher gives each reader a chance to connect with experts that he could not otherwise obtain. The unexcelled advantages of an Electrical Library which adds to its benefits the right to ask questions on technical matters certainly represents a combination which for purposes of instruction cannot be equalled.

FREE COUPON.—W. E.

Send this Coupon for the book of specimen pages of the International Electrical Library.

NAME.....

STREET.....

CITY.....

By sending in the above free coupon with your name and address the book of specimen pages will be promptly mailed to you, handsomely illustrated and giving full particulars of this new plan of education and how you may avail yourself of its advantages on easy terms of payment. The value given is exceptional, and every electrician, engineer, superintendent, and anyone interested in mechanical and electrical matters, should promptly investigate.

MANUFACTURE.

The International Electrical Library is published in a style in keeping with the high merit of the work.

No expense has been spared in the paper, printing, binding, and illustrations to make the set the best scientific library published.

Paper.—The best quality of paper has been made to order for the International Electrical Library. It is extra super-calendered book, giving a high surface which shows the type and illustrations to the best advantage.

Printing.—The printing on the set has been done on the most improved printing presses, from large clear-faced type, and with the greatest care, by skilled workmen.

The volumes, with the exception of the Encyclopedic Electrical Dictionary, are printed in two colors.

Engravings.—Nearly 2,000 fine wood-cuts, diagram and half-tone engravings appear in the set, and are shown to the best possible advantage by being printed in extra half-tone dark green ink, the text being in black.

Binding.—The sumptuous half-morocco leather binding has been selected for the International Electrical Library. Full leather backs and corners, cloth sides and gold lettering.

This binding is the most durable for repeated reference, and at the same time gives a very handsome and rich effect for library purposes.

Size.—The six volumes of the International Electrical Library contain nearly 3,000 pages, with 25 folding plates additional. Each volume is 9¾ x 6¾ inches and 2 inches thick. The set weighs 24 pounds, boxed.

Send for Our Handsomely Illustrated Book of Sample Pages of the

International Electrical Library,

NOTICE.

NOTICE TO CONTRACTORS—Sealed proposals for furnishing the materials and performing the labor required and necessary for installing the electric light wiring for the eastern approach, porches and lobbies, and completing the electric wiring for the western staircase and fifth story of the state library; also for furnishing the electric light fixtures for the eastern approach, lobbies, porticos and western staircase for the State Capitol at Albany, N. Y., may be sent by mail or delivered in person up to 12 o'clock noon on the 29th day of April, 1898, to the undersigned at his office in the Capitol, Albany, N. Y.

Only the bids of parties or firms actually engaged in electrical construction work and in the manufacture of electric light fixtures will be considered, and bidders must be able to refer to work similar in character, performed by them elsewhere.

Separate proposals must be made for the electric wiring and for the fixtures, and must be accompanied by a certified check or New York draft for a sum equal to ten per cent. of the amount of such proposal to guarantee execution of contract, payable at sight to the order of the Superintendent of Public Works. Said deposit will be retained as a part of the security until the completion of the contract. The amount of bond for the faithful performance of contract, on execution of contract, will be forty per cent. of the proposal or proposals, and the amount of labor bond required on execution of contract will be thirty per cent. of the proposal or proposals.

The work is to be done with all the speed compatible with good workmanship, and the contractor is required to state the time within which they will bind themselves to complete the work, as the element of time will be considered by the Superintendent of Public Works in awarding the contract.

Drawings and specifications may be seen and blank forms of proposals obtained at the office of I. G. Perry, Capitol Commissioner, in the Capitol, at Albany, N. Y.

Original designs for electrical fixtures, together with plans and specifications and proposals for furnishing same, as substitutes for designs shown as above stated, will be received and given consideration.

The undersigned reserves the right to reject any or all bids as he may deem for the best interests of the state.

GEORGE W. ALDRIDGE,
Superintendent of Public Works.

—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

STREET RAILWAY MEN—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles, Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmage), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.** Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machines, General Principles, Field Windings, (Varieties), series, Shunt, Compound etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors. Faults, Measurement by Drop of Potential Method Examples, Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.** Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Buckling, Fuse Block, Operating Car Trolley etc. **Chapter IX.** The Electric Motor Car in Detail. Series Parallel Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester Heaters. **Chapter X.** Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (1) No. 11, No. 28 and 28 A's, General Electric 1K with W. P. Machines, K 2, General Electric Series Parallel Controller with Magnetic Brake), Walker System (B2, E) Steel Motor Co. System. **Chapter XII.** General Electrical and Mechanical Information: Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Weight, Length and Resistance of Pure Copper Wire, Electrical Units and Formulæ, Equivalent Carrying Capacity, Properties of Iron, Tensile Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

GENUINE HARD PORCELAIN

A TECHNICAL EDUCATION 50 CENTS A WEEK.
The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 42 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.
CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago. Ill.
GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.
As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.
Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

SEND

BURNED OUT LAMPS

TO US FOR REPAIR.

We renew them with the **Finest Cellulose Filaments** and return them with glass as clear as crystal and equal if not superior to new lamps.

OUR FILAMENT IS UNSURPASSED.

PURITY, DENSITY AND SURFACE ARE FEATURES WHICH DECIDE THE QUALITY OF INCANDESCENT LAMPS—**We Give Them to You.**

2c. Each Cash for 1,000,000 Burned Out Lamps at our Factory. Special Price for Series Lamps or Bases. . . .

We will supply Central Stations and other large consumers with the best quality of Renewed Lamps at 13 cents in barrel lots.

JERSEY ELECTRIC COMPANY,

WRITE US FOR PARTICULARS. 744 BROAD STREET, NEWARK, N. J.

WE OFFER TO THE PUBLIC A NEW AND MARVELLOUS ELECTRIC CABLE,

As Reliable as a Galvanometer, as Infallible in Action, and Continuously Thermostatic.

Standardized in Sizes for all Interior Electric Adaptations. It is the only cable in the world combining Fire and Burglar Alarm protection with all other interior electric wiring work, in same installation. We confine ourselves to the manufacture and sale of this cable exclusively, it being auxiliary to all other electric interests.

By the use of this cable every infinitesimal part of every wire hereafter installed for whatever purpose in all buildings is made a detective point for the discovery and automatic notification of fire. We have opened up a new and rich field for the electrical contractor. If you are not acquainted with us and the cable, you should be. Write or call and become so.

Write for illustrated and descriptive printed matter.

We own the sole and exclusive right to manufacture and sell the Montauk Multiphase Cable and Central Station Controller, by virtue of the following patents: No. 546,261, Sept. 10, 1895; No. 546,262, Sept 10, 1895; No. 565,053, Aug. 4, 1896; No. 565,178, Aug. 4, 1896; No. 565,188, Aug. 4, 1896; No. 565,317, Aug. 4, 1896; No. 565,410, Aug. 4, 1896; No. 594,034, Nov. 23, 1897; No. 594,247, Nov. 23, 1897; No. 594,281, Nov. 23, 1897, which broadly cover not only the method of manufacturing, but the basic principle upon which these cables are constructed.

MONTAUK MULTIPHASE CABLE CO.

American Surety Building Rooms 9-10-11, 18th Floor, 100 Broadway, New York.

Telephone, 4031 Cortlandt.

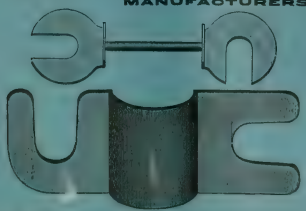
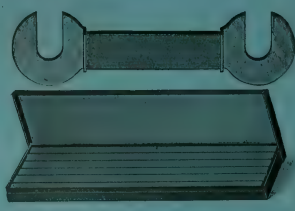
FACTORY: East 25th Street, New York.

AMERICAN ELECTRIC FUSE CO.,

521-531 Wabash Avenue, CHICAGO, ILL.

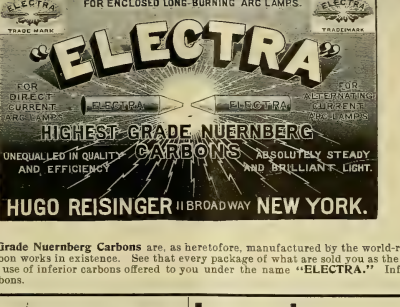
MANUFACTURERS





WRITE FOR SPECIAL DISCOUNTS AND CATALOGUE.

GOOD CARBONS MEAN LESS COST FOR CURRENT. Therefore, wherever a highly efficient service is desired, it is of the utmost importance to use the best Carbons obtainable.



"All the excellence in dynamos and arc lamps counts for but little, when poor Carbons are used in the lamps."

NOTICE:—The "Electra" Highest Grade Nuernberg Carbons are, as heretofore, manufactured by the world-renowned firm of **C. Conradty,** of **Nuernberg,** who owns both the oldest and largest carbon works in existence. See that every package of what are sold you as the "Electra" Carbons, bears a label with my trade mark, "ELECTRA," and thus avoid the use of inferior carbons offered to you under the name "ELECTRA." Infringers of my trade mark will be rigidly prosecuted to protect the purchasers of my carbons.

PORCELAIN ENAMEL.

Applied and Sold for Enameling Electric Conduits, Fire-Boxes, Heaters, Lightning Arresters, and all other Appliances.

WRITE FOR ESTIMATES AND QUOTATIONS.

The Sanitary Mfg. & Enameling Co.,

MUNCIE, INDIANA.

Reading Electrical Manufacturing Company,

Manufacturers and Jobbers,

Electrical Supplies at Wholesale Prices.

739 PENN STREET, READING, PA.

We Can Save You Money.

It means more business for us.

Pocket Voltmeters and Ammeters.

Our new Bicycle Lamp burns 25 hours without removing zincs.

Give us a TRIAL on your NEXT ORDER.

Incandescent Lamps 12 Cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

DIEHL MANUFACTURING CO.,
ELIZABETHPORT, N. J.

BUYERS will find no better or more honestly made goods than those of the K. & W. Company of Pittsfield, Mass. Their Hardy Incandescent Lamp is justly celebrated for its sustained candle power. Their Arc Hanger Board—an absolute cut out—is a model of workmanship and design. Their Dynamo Brush is a cool and quiet runner, and their Commutator Compound does prevent sparking. They have a New York Office at 120 Liberty Street, and their Western representatives are Meysenburg & Badt, 1504 Monadnock Block, Chicago. Their prices are moderate and parties wishing agencies will do well to communicate with them.

JUST AN OUTLINE.

THE STORY
IS TOLD.

Remember last year the days that were warm,
And the flies how they came swarm upon swarm,
And how the hot air sizzled and baked,
And how oft'en and oft'en our thirst we slaked.
Remember how wilted the collars became,
And our shirts and our cuffs and ourselves the same.
Then remember, just remember, to buy in time,
The original, a fan, like this outline.

"A Work of Art"

IS THE JUDGMENT OF EVERYONE
WHO HAS SEEN OUR 1898

Lundell Fan Motor Catalogue.

Its cover is in vermilion and gold, of special design, and its text pages fulfill the promise of the cover, beautifully illustrated as they are with half-tone vignettes, and superlatively printed upon heavy plate paper. It is the FINEST CATALOGUE OF THE SEASON, and it shows the best line of Fan Motors in the world. Everybody directly interested, should possess a copy, and may, by addressing....

CATALOGUE BUREAU

SPRAGUE ELECTRIC CO.,

Twenty Broad Street,

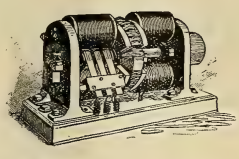
NEW YORK CITY.

THE BRUSH ELECTRIC COMPANY

BRUSH

THE BRUSH ELECTRIC COMPANY

Brush apparatus has been on the market for twenty years. A majority of customers order supply parts direct from us. Many do not. We want this trade and have reduced our prices. Ask for quotations and send orders to the nearest Sales Office.



FIRST BRUSH ARC DYNAMO—1877.

SALES OFFICES:

Schenectady, N. Y.
Cleveland, Ohio.
Boston, Mass., 180 Summer Street.
New York, N. Y., 44 Broad Street.
Philadelphia, Pa., 509 Arch Street.
Cincinnati, Ohio, 429 West Fourth Street.

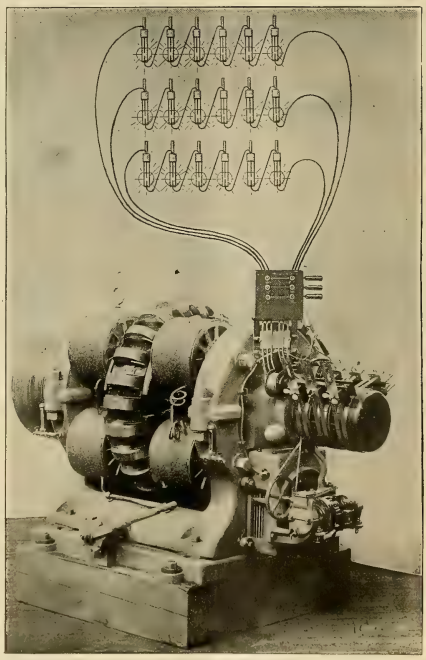
Brooklyn, Kings Co.	625
Rockford, Ill.	625
Albany	500
Troy	500
Carnegie Steel Co.	500
Manchester, N. H.	500
Reading, Pa.	500



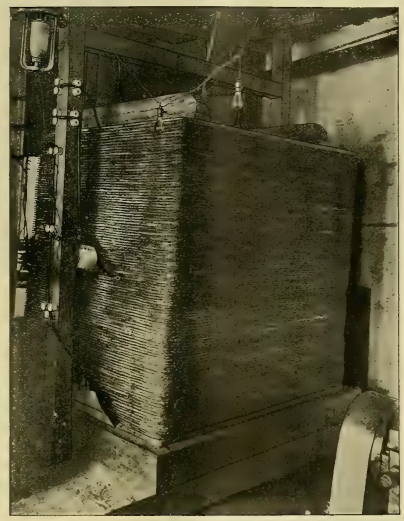
BRUSH MULTI-CIRCUIT 125-LIGHT ARC DYNAMO—1898.

Over 60,000 lights' capacity in large Brush arc dynamos sold. A large proportion of them using Multi-Circuit Dynamos.

The newly designed Brush dynamos have the following capacities: 55, 80, 100, 125, 240, 300, 2,000 candle power lights; 45, 85, 120, 160, 1,200 candle power lights.

Brush arc lamps were first used in 1877. More of them being sold to-day than ever before.

Two or more separate circuits run direct from one dynamo with any distribution of load on the different circuits. The advantages are absolute flexibility in handling of circuits; reduction of high voltages on circuits run from large dynamos; use of large units with corresponding increase of efficiency; saving in floor space, oil, belts, shafting, pulleys, attendance.



What would you say to a Storage Battery giving any Voltage and Capacity in a Single Cell? . . . . .

The High Tension Storage Battery

Is such a battery. Furnished in all sizes from portables to station batteries of 5,000 ampere-hour capacity and over. Two volts per plate. Odorless. No slopping of acid. Self contained. No falling out of plugs. No short circuiting. View of 220 volts High Tension Storage Battery of 3,000 ampere-hours capacity at Souderton, Pa., furnishing current for street and private lighting.

Correspondence solicited with reliable parties desiring to act as agents. For full particulars and catalogue address

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

Automatic Motor-Driven Starter.

Engineers and Contractors

Desiring a *thoroughly reliable* Automatic Starting Apparatus for electric pumps, elevators and other intermittent work, cannot do better than send for our catalogue of Motor-Driven Starters and Specialties. No dash-pots, shunt magnets or other delicate mechanism, yet automatic start and instantaneous release under all conditions.

Automatic Switch Co., Baltimore, Md.

Can I Become an Electrical Engineer?

For our free book entitled **"Can I Become an Electrical Engineer?"** address

THE ELECTRICAL ENGINEER INSTITUTE OF CORRESPONDENCE INSTRUCTION,
(Conducted under the auspices of *The Electrical Engineer.*)

HERMAN A. STRAUSS, E. E., General Manager.

120 Liberty Street, NEW YORK, U. S. A.

STRENGTH is that quality which line wire must possess in order that reliable and uninterrupted service is assured. A line wire without strength yet possessing high conductivity is just as deficient from the point of view of good workings as a strong wire which is not a good conductor. A happy medium between the two is found in

BI-METALLIC WIRE,

Composed of copper and steel; a wire which partakes of the good electrical and mechanical qualities of the metals of which it is formed. The question of cost is worthy of consideration because Bi-Metallic Wire is

CHEAPER THAN COPPER.

NOTICE.

NOTICE TO CONTRACTORS.—Sealed proposals for furnishing the materials and performing the labor required and necessary for installing the electric light wiring for the eastern approach, portico and lobbies, and completing the electric wiring for the western stairway and fifth story of the state library; also for furnishing the electric light fixtures for the eastern approach, lobbies, portico and western staircase, for the State Capitol at Albany, N. Y., may be sent by mail or delivered in person up to 12 o'clock noon on the 29th day of April, 1898, to the undersigned at his office in the Capitol, Albany, N. Y.

Only the bids of parties or firms actually engaged in electrical construction work and in the manufacture of electric light fixtures will be considered, and bidders must be able to refer to work similar in character, performed by them elsewhere.

Separate proposals must be made for the electric wiring and for the fixtures, and must be accompanied by a certified check or New York draft for a sum equal to ten per cent. of the amount of such proposal to guarantee execution of contract, payable at sight to the order of the Superintendent of Public Works. Said deposit will be retained as a part of the security until the completion of the contract. The amount of bond for the faithful performance of contract, or executing the contract, will be forty per cent. of the proposal or proposals, and the amount of labor bond required on execution of contract will be thirty per cent. of the proposal or proposals.

The work is to be done with all the speed compatible with good workmanship, and the contractor will be required to state the time within which they will bind themselves to complete the work, as the element of time will be considered by the Superintendent of Public Works in awarding the contract.

Drawings and specifications may be seen and blank forms of proposals obtained at the office of I. G. Perry, Capitol Commissioner, in the Capitol, at Albany, N. Y.

Original designs for electrical fixtures, together with plans and specifications and proposals for furnishing same, as substitute for designs shown as above stated, will be received and given consideration.

The undersigned reserves the right to reject any or all bids as he may deem for the best interests of the state.

GEORGE W. ALDRIDGE,
Superintendent of Public Works.

SEALED PROPOSALS
—FOR—
Lighting the City Natchez
WITH
ELECTRICITY.

MAYOR'S OFFICE,
NATCHEZ, MISS., April 9th, 1898.

Notice is hereby given that sealed proposals will be received at the office of the City Clerk until **Thursday, June 2nd,** at 4 o'clock p. m., for lighting the streets, alleys, parks and public buildings of this city with electricity for a term of ten (10) years, from March 1st, A. D. 1899, in accordance with plans and specifications on file in said clerk's office.

The board of mayor and aldermen reserve the right to reject any and all bids.

Specifications will be furnished parties wishing to bid, by application to the City Clerk.

Attest: W. G. BENBROOK, Clerk.
THOS. R. QUARTERMAN, Mayor.
City Clerk.

Notice to Contractors.

ST. PAUL, MINN., April 19, 1898.

Office of City Engineer,
City of Superior, West Superior, Wis.

CITY ELECTRIC LIGHTING PLANT.

Sealed proposals will be received until 11:00 A. M. of April 26, 1898, and immediately thereafter opened, for the construction and installation of a complete electric lighting plant, consisting of Boiler Plant, Compound Condensing High Speed Engines, Arc Light Dynamos, Two-Phase Generators, Condensers, Heaters, Pumps, Switchboards, etc., for a complete installation.

Copies of the plans and specifications may be seen on and after April 25th, 1898, by those desiring to submit proposals, at the office of the City Engineer, City of Superior, at the office of the consulting engineers, 511 Phoenix Building, St. Paul, Minn., or at 304 Manhattan Building, St. Paul, Minn. Synopsis of specifications can be had on application. Each bid must be accompanied by a certified check for a sum not less than 3 per cent. of the amount of the proposal, made out to the order of the Treasurer of the City of Superior.

The city reserves the right to reject any or all bids, and to waive any defects or formalities in any bid should it be deemed to the interest of the city to do so. All bids received after the time stated will be returned unopened.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice, and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magneto Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magneto Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens Kotyra Neumayer and Sutcliffe Receivers.
CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction
CHAPTER 28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

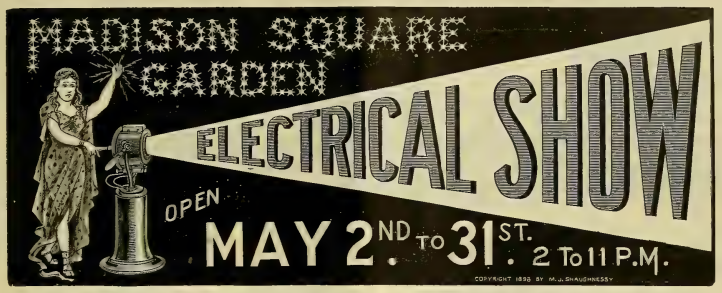
THE FIFTH EDITION JUST OUT.
(Edition of 5,000 copies.)
Enlarged. Revised. Up-to-date.
"Standard Wiring" for Electric Light and Power.
By H. C. CUSHING, Jr., Member A. I. E. E.
Electrical Inspector Fire Underwriters' Tariff Association of New York.
ADOPTED BY THE FIRE UNDERWRITERS OF THE UNITED STATES.
It contains every table, formula and rule for all systems of outside and inside wiring, together with thirty illustrations of the newest and safest methods for the installation of Pole Lines, Dynamos, Motors, Switchboards, Transformers, etc., etc., as required by the insurance inspector.
RUSSIAN LEATHER COVER, POCKET SIZE, $1.00.
Sent postpaid to any address upon receipt of price by
ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., Chicago.



This is the Poster. You see it growing into shape everywhere.

The newspaper advertising is also beginning to attract attention and interest.

The daily papers, taking their cue from the splendid work of the technical papers, are now telling the facts in their news columns.

These are some of the ways whereby the management will MAKE the Electrical Show profitable to the exhibitors.

A little space may still be had. It is still possible to shift the historical and educational features. It is still possible to condense in one spot, expand in another, and change, twist, alter for the general good.

In a very few days every possibility of this kind will surely be gone. Every inch of space will most likely be gone.

Electrical Exhibition Company,

MARCUS NATHAN, General Manager. MADISON SQUARE GARDEN, NEW YORK.

THE SKINNER AUTOMATIC

Self-Adjusting Slide Valve.

Five years' guarantee not to leak or require attention.

One-Half Per Cent. Regulation.

GOVERNOR with frictionless bearings. Requires no LUBRICATION or ATTENTION.

IT COSTS SO LITTLE AND WORKS SO WELL

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00**.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50**.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00**. The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50**. The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.25**. A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated. This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents. The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents. The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents. The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the layman who knows nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

The Westinghouse Machine Company, Manufacturers.
Westinghouse, Church, Kerr & Company, Engineers.

We believe that we represent a combination of **manufacturing facilities** and **engineering experience** capable of giving the most efficient service to those interested in the generation of power—steam, gas or electric.

AS ENGINEERS—Designing and supervising or contracting. We install steam plants, electric plants, ice and refrigerating plants, boiler plants, mechanical draft apparatus, economizers, etc., complete, or overhaul and remodel existing plants.

We are "first hands" on most of the important items entering into such plants and have enviable connections with the best manufacturers of all other standard goods or specialties.

We have done work in all parts of the country, and for every conceivable kind of service, so that it is a matter of expert knowledge rather than opinion with us, to what extent local conditions determine or limit the value of any special form of apparatus entering into the construction of a power plant.

While not underrating the economy that makes attractive figures on paper, we look out especially for **commercial economy** the sort that puts dollars in the bank.

We are as jealous of our reputation as engineers as of our reputation as manufacturers, and all our work is **backed up by unquestioned responsibility.**

We have the Largest and Most Complete Electrical

REPAIR SHOPS

In the West. **ELECTRICAL REPAIRS AND MACHINE WORK OF EVERY DESCRIPTION. In having your repair work done by a company operating hundreds of dynamos and motors you are sure of good work and get the benefit of our experience.**

CHICAGO EDISON COMPANY,

76 MARKET STREET, CHICAGO.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

LYNN, MASS.

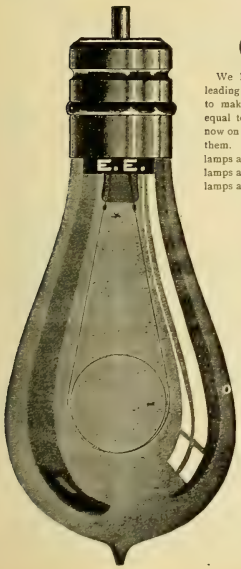
A Strictly High-Grade Lamp

15 CENTS.



We have just arranged with one of the leading manufacturers of incandescent lamps to make for us a strictly high-grade lamp, equal to any of the so-called "Trust" lamps now on the market, and superior to many of them. For the next 60 days we offer these lamps at 15 cents each, in barrel lots. These lamps are fully guaranteed. We sell refilled lamps at 13 cents each. Give us a trial order.

New Midget Upton 150-Hour Arc Lamp for 110-Volt Circuit, $15.00
For Alternating Circuit, 20.00

A full line of Electrical Supplies carried in stock. Lowest possible prices.

In Going to St. Paul and Minneapolis

The wise traveler selects the Chicago, Milwaukee & St. Paul Railway.

Why?

It is the best road between Chicago and the Twin Cities.

It has the most perfect track.

Its equipment is the finest.

Its sleeping cars are palaces.

Its dining-car service is equal to the best hotels.

Its electric-lighted trains are steam-heated.

Its general excellence has no equal

It is patronized by the best people.

It is the favorite route for ladies and children as well as for men.

It is the most popular road west of Chicago.

It gives the choice of seven trains daily.

THE TELEPHONE HAND-BOOK
BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.

BELL APPARATUS

FOR THE

Independent Telephone Field.

SWITCHBOARDS, DISTRIBUTING BOARDS, CABLE TERMINALS, POLE TOP CABLE TERMINALS, PROTECTORS, LIGHTNING ARRESTERS, and LINE FUSES, practically the same as those in use in modern Bell Exchanges.

A complete protective system insuring absolutely against damage from lightning, electric-light or trolley-wire currents.

We manufacture this line of apparatus.

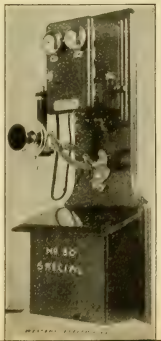
We are prepared to equip and install complete telephone exchanges of any size, from 100 to 10,000 subscribers, with apparatus similar to that used by the Bell Co.

We guarantee our material, workmanship and patents.

STERLING ELECTRIC CO.,

71 and 73 W. ADAMS ST.,

Main Office, First Floor. **CHICAGO.**



TELEPHONE AND SWITCHBOARD APPARATUS.

REPRESENTING all that is good and desirable—mechanically and electrically as nearly perfect as ingenuity can devise and capital create.

APPARATUS that has behind it the record of years of universal approval and satisfaction wherever used—a guarantee that protects—and a certainty of the highest efficiency. For this kind of apparatus go to the

—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes: subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K. with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire. Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

"ST. PAUL" TELEPHONES

A VALUABLE NEW WORK.

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.

Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. BUBIER, 2d.
ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART
1. History.
2. Theory.
3. Measurements. (Electric and Magnetic.)
4. Electric Batteries.
5. Electro-Chemistry and Metallurgy.
6. The Telegraph and Telephone.
7. Dynamos and Motors.
8. Management of Dynamos and Motors.

PART
9. Electric Lighting.
10. Transformers.
11. Wiring for Electric Power.
12. Wiring for Bell Fitting and Gas Lighting.
13. Electric Railways.
14. Miscellaneous.
15. Useful Tables.
16. Logarithms.

Contains over four hundred and fifty pages and many illustrations.

PRICE, CLOTH, ONLY $2.50; POSTPAID.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

ELECTRICITY AND MAGNETISM.

A series of thirty-four lessons covering the Science of Electricity from its Fundamental Principles to its Everyday Practical Application. Comprises 325 pages, over 300 diagrams and illustrations. Price $2. By

PROF. D. C. JACKSON, University of Wisconsin.
PROF. H. S. CARHART, University of Michigan.
PROF. B. F. THOMAS, University of Ohio.
PROF. WM. A. ANTHONY, of New York.
PROF. BROWN AYRES, Tulane University.
PROF. A. C. PERRINE, Leland Stanford University, Cal.
PROF. GEO. D. SHEPARDSON, University of Minn.,
And others.

A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood.

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action (concluded).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltameters.
10. Measurement of electrical resistance.
11. Everyday measurements of electric currents and pressures.
12. Everyday measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic deposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (concluded).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

MODERN METHODS IN INSTALLING SWITCHES

FREQUENTLY CALL FOR THE USE OF OUR

FLUSH PLATES

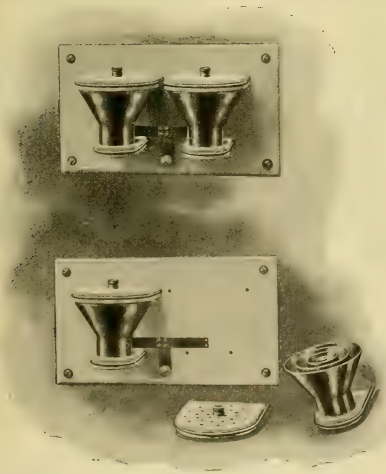
No. 4 L. FLUSH PLATE.

INSTEAD OF A NUMBER OF SINGLE SWITCHES.

OUR SPECIAL SWITCHES, SUCH AS ELECTROLIER, THREE-WAY, DIMMER, ETC., ALSO ADD GREATLY TO THE CONVENIENCE AND POPULARITY OF ELECTRIC LIGHTING.

Our Illustrated Catalogue, Containing Full Particulars, will be Mailed on Application.

The Hart & Hegeman Mfg. Co., - Hartford, Conn.



NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, $2.50; leather, $3.00.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth. $1.50.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes. 8vo, cloth, gilt, $6.00.
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, $3.50.
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston* Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, 75 cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth. $1.25.
A most valuable aid to students and electrical workers.

A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, cloth. 50 cents. Now approaching its 65th thousand. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo. illustrated, cloth, 50 cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, 75 cents; paper, 50 cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume. 12mo, cloth and gold, 75 cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Rontgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

The Westinghouse Machine Company, Manufacturers.
Westinghouse, Church, Kerr & Company, Engineers

We believe that we represent a combination of **manufacturing facilities** and **engineering experience** capable of giving the most efficient service to those interested in the generation of power—steam, gas or electric.

As Manufacturers, we build

Steam Engines—5 h. p. to 5,000 h. p. The kind used by those whose business success bears witness of their good judgment.
Gas Engines—Haven't dared to mention them before; selling themselves too fast. Our capacity is now greatly enlarged and we are just beginning to get the better of our orders. Some sizes in stock for prompt delivery.
Mechanical Stokers—The kind most extensively used, the kind that is all the name implies.
Ice and Refrigerating Machinery—For those who want the best that mechanical skill can produce, and money can buy.

Iron Roof For Sale.

Width of building, 175 feet out to out, divided into a center span 66 feet with a wing on each side 43 feet 6 inches; total length of the building 359 feet. This building is designed with brick sides and gable walls, with iron roof trusses and iron supporting columns; originally built for an iron foundry, but owing to the failure of the purchaser is now offered for sale at a bargain. Is admirably adapted for a foundry for light or heavy castings, machine shop, car barn, or for any other general manufacturing purposes. We guarantee the iron work as good as new, building never having been used. Apply to

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 89 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

LYNN, MASS.

Loricated Conduits.

THE latest development of safety ducts for interior wiring—a standard-gas-pipe-thickness iron pipe with a smooth, hard, flexible, tough, non-absorptive acid and alkali proof coating, inside and out. You can bend it and it will not buckle, crack, splinter or unravel. You can heat it and it will not run or get "tacky." It is lime, cement and wheelbarrow proof, and the ideal raceway for electric conductors.

Approved by all Underwriting Associations. We have full line of this product.

In addition to the above we have all sizes of Circular Loom, Plain, Brass and Iron Armored Interior Conduit.

Central Electric Company,

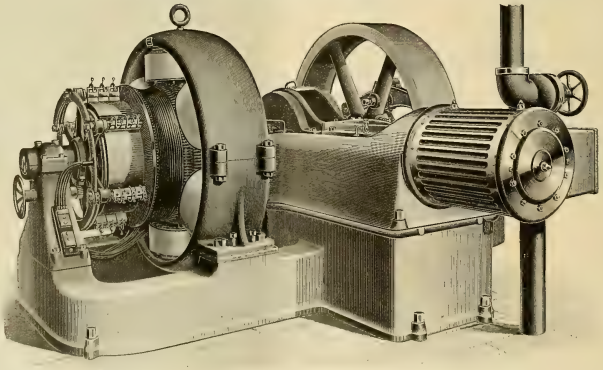
ELECTRICAL EXHIBITION

MADISON SQUARE GARDEN, NEW YORK.



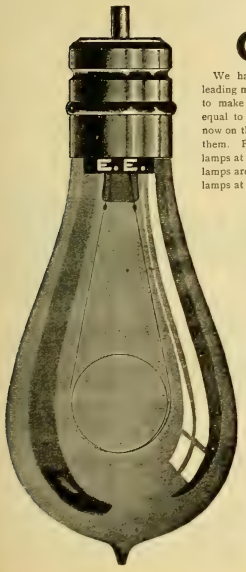
See our exhibit of a complete lighting and power plant, including an AMERICAN-BALL ENGINE AND DIRECT CONNECTED GENERATOR, furnishing current for illuminated signs, and driving one of our MULTIPOLAR MOTORS. The entire exhibit manufactured by us.

AMERICAN ENGINE COMPANY,

BOUND BROOK, N. J.

BUYERS will find no better or more honestly made goods than those of the K. & W. Company of Pittsfield, Mass. Their Hardy Incandescent Lamp is justly celebrated for its sustained candle power. Their Arc Hanger Board—an absolute cut out—is a model of workmanship and design. Their Dynamo Brush is a cool and quiet runner, and their Commutator Compound does prevent sparking. They have a New York Office at 120 Liberty Street, and their Western representatives are Meysenburg & Badt, 1504 Monadnock Block, Chicago. Their prices are moderate and parties wishing agencies will do well to communicate with them.

A Strictly High-Grade Lamp



15 CENTS.

We have just arranged with one of the leading manufacturers of incandescent lamps to make for us a strictly high-grade lamp, equal to any of the so-called "Trust" lamps now on the market, and superior to many of them. For the next 60 days we offer these lamps at 15 cents each, in barrel lots. These lamps are fully guaranteed. We sell refilled lamps at 13 cents each. Give us a trial order.

New Midget Upton 150-Hour Arc Lamp for 110-Volt Circuit, $15.00

A full line of Electrical Supplies carried in stock. Lowest possible prices.

2¼-inch Shade Holders, per doz., 25c.
Edison Wiring Receptacles, each, 4c.
Climbers, per pair, - - - 75c.
3-inch Iron Box Bells, each, - 20c.

Send for copy of the *"Electrical Bulletin."*

Electrical Machinery.

Over 1,000 machines for sale, of standard make: Incandescent Dynamos, Arc Dynamos, 110-220 and 500-Volt Motors, Motors for Alternating and Arc Circuits. Send for complete list. Arc Lamps, Transformers, Alternating and Direct-Current Meters. All standard makes in stock. Send for list giving net prices.

THE

PHILADELPHIA ELECTRICAL EXPOSITION

OPEN JUNE 6 TO JULY 6, 1898.

All Manufacturers of Electrical Apparatus Invited to Participate.

This exhibit will be more comprehensive and surpass anything previously attempted in its line in this country.
Special features of commercial character have been arranged for exhibitors to sell during the Exposition.
The attractions of the Exposition will include all the striking novelties of the electrical trade, among the same being the **Kinetoscope, Cinematograph,** and **X-Ray** apparatus, together with the **Electrical Cataract,** being exact reproduction of the noted one used in Paris.

PHILADELPHIA IS THE GREAT CENTER OF OPERATIVE ELECTRICITY OF AMERICA.

FOR FURTHER INFORMATION AS TO SPACE, ETC., ADDRESS

THE PHILADELPHIA ELECTRICAL EXPOSITION COMPANY, 1308 ARCH STREET, PHILADELPHIA.

HIGH GRADE INCANDESCENT LAMPS, With or Without Tips.

50, 110, 220 VOLTS OF ANY C. P. MOUNTED IN STANDARD BASES.

We offer our lamps in competition with any others on the market. The HIGHEST DEVELOPMENT in life, maintenance of candle power, commercial efficiency and good workmanship ARE WHAT WE HAVE TO OFFER.

We make no claim to wonderful inventions revolutionizing the art, or to the employment of all the lamp experts available.

Series Lamps for any service or socket. Responsible representatives wanted in large cities.

THE "CLARK" WIRE.

FOR SWITCHBOARD, RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

ELECTRICITY AND MAGNETISM.

A series of thirty-four lessons covering the Science of Electricity from its Fundamental Principles to its Everyday Practical Application. Comprises 326 pages, over 300 diagrams and illustrations. Price $2. By

PROF. D. C. JACKSON, University of Wisconsin.
PROF. H. S. CARHART, University of Michigan.
PROF. B. F. THOMAS, University of Ohio.
PROF. WM. A. ANTHONY, of New York.
PROF. BROWN AYRES, Tulane University.
PROF. A. C. PERRINE, Leland Stanford University, Cal.
PROF. GEO. D. SHEPARDSON, University of Minn.,
and others.

A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood.

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action concluded).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltmeters.
10. Measurement of electrical resistance.
11. Everyday measurements of electric currents and pressures.
12. Everyday measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic deposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (con-luded).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

THE TELEPHONE HAND-BOOK

BY
HERBERT LAWS WEBB.

Price $1.00.

The only complete and practical work of its kind on the market.

PUBLISHED BY
THE ELECTRICIAN PUBLISHING CO.,
Suite 510 Marquette Building, Chicago

THE ORATOR

The ORATOR AND Improved Hunnings

solid back dust transmitters in Wall, Desk and Cabinet styles. They are Convenient, Durable and the best of talkers.

A trial will convince anyone of their superiority on either short or long distance work.

Anyone can make an instrument that will work well at first, but to produce one that will continue to meet every proper demand is quite another problem.

The ORATOR will.

FREEPORT, ILL., March 2nd, 1897.

IT COSTS SO LITTLE AND WORKS SO WELL

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

Cost per week: 10 to 40 h. p., 25c.; 40 to 80 h. p., 37½c.; 80 to 120 h. p., 50c.; 120 to 160 h. p., 62½c.; 160 to 200 h. p., 75c.

NEW BOOKS.
AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, $2.50; leather, $3.00.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, $1.50.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, $6.00.
The rapid advance of electrical sciences made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, $3.50.
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, 75 cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, $1.25.
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, 50 cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates: the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo illustrated, cloth, 50 cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, 75 cents; paper, 50 cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, 75 cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the layman who knew nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents. CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System. CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing. CHAPTER VIII: Current Regulating; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation, The Dynamo Regulator, Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation, Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator, Care and Adjustment of Dial, Dial Controller; Circuits and Connections of No. 2 Brush Dynamo, Circuits of Compound Wound Constant Potential Brush Dynamo. CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo, Action of Regulator; Heavy Pressure Indicator, Diagram of Circuits; Description of Parts and Operation. CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo Armature, Diagram of Circuits; The Regulator and Motor; Action of Regulator. CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo, Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator, Circuits; Action of Regulator. CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo, Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters, Pressure and Potential Indicators. CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus. CHAPTER XIX: Wheatstone Bridge or Electrical Balances; Diagram of Circuits and Method of use; Bridge and Rheostat, Round Pattern, Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature, Field, Bell, Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines. CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change over Plug and Socket Connection. CHAPTER XXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; of Series Motors, Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armatures; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Inertia. CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Considered; Systems; Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature. Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers, Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers. CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; other Devices; The Foil Protector; Different Types of Transformers. CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses. CHAPTER VII: Parallel System; Series Arc Lighting; Diagram of Circuits, Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers, Fuses; Diagram of Series Arc Light Circuit. CHAPTER VIII: Lines of Force; Reference; Magnetic Penetration, The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis. CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp, Diagram of Circuits in Lamp, Action of the Mechanism; Flat Carbons. CHAPTER X: Arc Lamps, in Multiple; Shatterly Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters, Voltmeters; Description of Several Forms of Instruments. CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instrument. The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter. CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types. CHAPTER XIV: Spring Meters; Curled Spring Meter. CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument. CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation, Diagrams of Parts; Shatterly Induction Meter; Description of Parts and Principles of Operation. Watt Meter, Thomson Meter. CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Mechanism for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.

Weston Standard Illuminated Dial Station Voltmeter, Style B.

Weston Standard

Portable Direct Reading Voltmeters and Millivoltmeters, Ammeters and Milliammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

Mention the WESTERN ELECTRICIAN when writing for catalogues.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

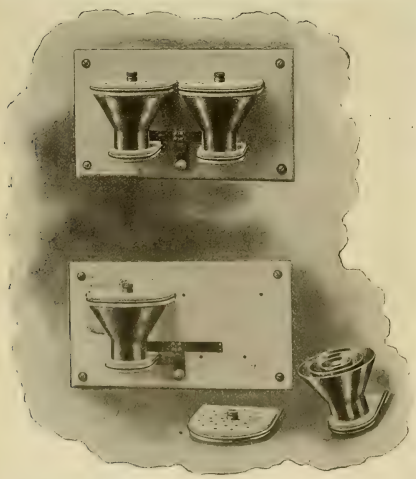
DIAMOND ELECTRIC CO.,

MANUFACTURERS,

Office: 1202 Fisher Building, Chicago, Ill. **Factory: Peoria, Ill.**



NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

STANLEY ELECTRIC MANUFACTURING COMPANY,

PITTSFIELD, MASS., U. S. A.

THE ROYAL ELECTRIC CO., Montreal, Canada, are sole licensees for the manufacture and sale of the S. K. C. System in Canada.

San Francisco, 800 California Street.
Anderson, S. C.
St. Louis, Mo., Western Electrical Supply Co.

Loricated Conduits.

THE latest development of safety ducts for interior wiring—a standard-gas-pipe-thickness iron pipe with a smooth, hard, flexible, tough, non-absorptive acid and alkali proof coating, inside and out. You can bend it and it will not buckle, crack, splinter or unravel. You can heat it and it will not run or get "tacky." It is lime, cement and wheelbarrow proof, and the ideal raceway for electric conductors.

Approved by all Underwriting Associations. We have full line of this product.

In addition to the above we have all sizes of Circular Loom, Plain, Brass and Iron Armored Interior Conduit.

Central Electric Company,

GEO. A. McKINLOCK, President.
CHARLES E. BROWN, Secretary.
S. R. FRAZIER, Treasurer.

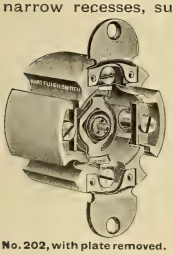
HART FLUSH SWITCHES.

BEST and CHEAPEST.

As here illustrated, we make Flush Switches with both Round and Rectangular Bases. Our ROUND style Base will fit our regular Iron Frames and Boxes. Our RECTANGULAR Bases are adapted for narrow recesses, such as Frames and Boxes usually used for "Push Button" Flush Switches. You will therefore note that if some other style of Flush Switch which you have in use causes trouble, you can replace it with a



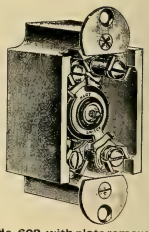
No. 202, with plate removed.

HART FLUSH SWITCH

without disturbing your own frame or box. Simply take out the defective Switch and replace it with a HART.

For full particulars, see our Illustrated Catalogue, pages 14 and 28.

All Electrical Supply Houses carry these Switches in stock, and can fill orders without delay.



No. 602, with plate removed.

Make your orders read "HART" Switches, and you will be well satisfied with value received.

Chicago, May 9th, 1898.

Sealed proposals will be received by the West Chicago Park Commissioners, at office in Union Park, until 4 o'clock p. m. of Tuesday, May 24th, 1898, to furnish 164 cut-out switches more or less, according to the specifications which are on file in the Engineer's office in Union Park.

Proposals must be made out upon blank forms to be obtained at said office and be addressed to "West Chicago Park Commissioners," endorsed "Switches," and must be accompanied with currency to the amount of five per cent. of the bid, or certified check for the same amount drawn on a responsible bank doing business in the city of Chicago, and made payable to the order of the West Chicago Park Commissioners.

The contractor to whom this work may be awarded will be required to furnish a bond in a sum equal to one-half the amount of contract, with sureties acceptable to said Park Commissioners.

The West Chicago Park Commissioners reserve the right to reject any or all bids.

JOSEPH W. SUDDARD, President.
Attest: ERNEST G. SCHUBERT, Secretary.

Buffalo, - N.Y.

PROPOSALS.

Proposals will be received by the Board of Trustees of the Village of Western Springs, Ill., until 8 o'clock p. m. of Tuesday, May 24, 1898, for furnishing materials and labor for a complete street lighting plant according to the plans and specifications which may be seen in the office of W. H. Schott, 558 South Halsted St., Chicago.

Parties submitting bids will be required to deposit with bid a certified check of 5 per cent. of the amount of their bid, payable to the treasurer of the village.

In case the successful bidder fails to enter into contract within five days after he has been notified of its acceptance he shall forfeit the check deposited. The successful bidder will be required to furnish an approved bond in such sum as may be decided by the trustees of Western Springs, said bond to indemnify the Village of Western Springs against accident during construction of plant, and the full compliance and completion of plant within 60 days from date of signing contract.

The village reserves the right to reject any or all bids. All bids must be addressed to C. Herman Jackson, clerk of said village. Plans may be seen and copies of specifications obtained by inquiring of W. H. Schott, 558 South Halsted Street Chicago.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice, and most of the material, apparatus and methods described are peculiar to or have originated in this country.

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books, which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2 Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil. Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit
8. Magneto Telephones.
9 The Bell Telephone Receiver.
10 Other forms of Magneto Telephones.
11 The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12 The Siemens Kotyra Neumayer and Bottcher Receivers
CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries
25. Magneto Bell.
26 Automatic Switches.
27 Telephone Line Construction.
CHAPTER 28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

A. H. HANSON, G. P. A., Ill. Cent. R. R., Chicago, Ill.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY. - - - Suite 510 Marquette Building, Chicago, Ill.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb, 16mo, 160 pp. Price $1.00.

This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and others.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound, fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 423 pp., 127 illustrations. Price $1.00.

This book describes the construction of the various forms of transmitting and receiving devices, the signalling mechanisms and the switchboard apparatus of the central station. It is written by two well-known electricians, and heads the north of the list of work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 390 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManaman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 578 pages, 323 illustrations. Price $10.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Guy. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages, 169 illustrations. Price $5.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 25 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 90 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 4 plates and 48 engravings. Price $2.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG. CHICAGO.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells; Polarization and How Avoided; Exciting Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded.**—Closed Circuit Cells; Local Action; Law of Electrochemical Action; Electrochemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism; Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of Several Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery, Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte; Electrolysis; Electroing; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Ammeters; Milliampere; Microampere; Three Classes of Magnetic Ammeters; Weston Ammeometer; Electro Dynamometers; Hot Wire Instruments; Scales of Ammeometers; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometer; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Electrical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.** Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.** Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving Telegraph Lines, Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy, Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Duplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductor; Alternating Current; Dynamos; Magnetics; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Maintenance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Design; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vacuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Inward Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Feeding Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Current Records; Recording Voltmeter; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. **Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.**

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 63th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Roentgen. The public would do well to secure both these important works.

JUST WHAT YOU ARE LOOKING FOR!

A New and Valuable Book

Electric Lighting Plants,

THEIR COST AND OPERATION.

By W. J. Buckley. With numerous illustrations, diagrams, plans, tables, etc. 275 pages. Cloth. Price, $2.00, postage free. This work gives all necessary data for the erection of an electric light plant of any size. The cost of Arc Lighting. The cost of Incandescent Lighting.

READ THE TABLE OF CONTENTS:

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators, Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus, Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N.E.L.A. PAPER COVER, PRICE $1.00.

Iron Roof For Sale.

Width of building, 155 feet out to out, divided into a center span 85 feet with a wing on each side 43 feet 6 inches; total length of the building 330 feet. This building is designed with brick sides and gable walls, with iron roof trusses and iron supporting columns; originally built for an iron foundry, but owing to the failure of the purchaser is now offered for sale at a bargain. Is admirably adapted for a foundry for light or heavy castings, machine shop, car barn, or for any other general manufacturing purposes. We guarantee the iron work as good as new, building never having been used. Apply to

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

Chapman Voltage Regulators

insure **Steady Light** from unsteady power.
For use with Steam or Water Plants.
—**No Attendance Required.**—
Regulator sent on 30 days' trial.
Let us show what it can do for you.

Belknap Motor Company,
474-478 Fore Street, PORTLAND, MAINE, U. S. A.
New York Office, 27 Thames Street. Boston Office, 620 Atlantic Ave.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

LYNN, MASS.

The Phoenix Glass Co.

OF PITTSBURG, PA.,

HAS REMOVED
its New York Office to
15 Murray Street

FRANKLIN BUILDING,

where all the extensive and various lines of **The Phoenix Glass Company's** well-known manufacture are on exhibition, consisting of **Arc and Incandescent Electric Globes and Shades,** Gas and Kerosene **Globes and Shades, Decorated Vase Lamps, &c.**

149 155 PLYMOUTH PLACE CHICAGO ILL.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 11 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

For Classified Index of Advertisements See Page VI.

F. HARDTMUTH & CO., VIENNA, AUSTRIA.

We having received a very large shipment of

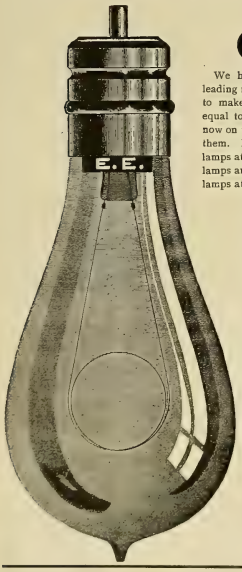
CORED CARBONS

Just before the new tariff went into effect, are prepared to make very low prices on the following sizes: 5-8 in. by 10 in. and 12 in. and 19-32 in. by 9 1-2 in.

Chicago Edison Company,

General Western Agents, 139 Adams Street, Chicago.

A Strictly High-Grade Lamp 15 CENTS.



We have just arranged with one of the leading manufacturers of incandescent lamps to make for us a strictly high-grade lamp, equal to any of the so-called "Trust" lamps now on the market, and superior to many of them. For the next 60 days we offer these lamps at 15 cents each, in barrel lots. These lamps are fully guaranteed. We sell refilled lamps at 13 cents each. Give us a trial order.

New Midget Upton 150-Hour Arc Lamp for 110-Volt Circuit, $15.00

A full line of Electrical Supplies carried in stock. Lowest possible prices.

2½-Inch Shade Holders, per doz., 25c.
Edison Wiring Receptacles, each, 4c.
Climbers, per pair, - - - 75c.
3-Inch Iron Box Bells, each, - 20c.

Send for copy of the "*Electrical Bulletin*."

Electrical Machinery.

Over 1,000 machines for sale, of standard make: Incandescent Dynamos, Arc Dynamos, 110-220 and 500-Volt Motors, Motors for Alternating and Arc Circuits. Send for complete list. Arc Lamps, Transformers, Alternating and Direct-Current Meters. All standard makes in stock. Send for list giving net prices.

The Electrical Exchange,

Dealers in Everything Electrical,

166-174 S. Clinton St., CHICAGO.

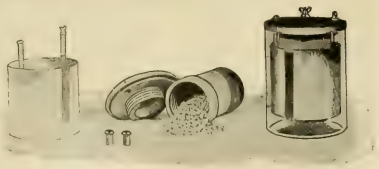
No charge for boxing and carriage if "Western Electrician" is mentioned.

The American Electric Meter Co.,

9th St. and Montgomery Ave., Philadelphia, Pa.,

Is now prepared to take orders for early delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is magnetically shielded.
This meter is direct reading, having no multiplier.
This meter does not require one-thousandth of a horse power.
This meter will operate for years without opening.
This meter has no springs, jewels or frictional errors.
This meter once right is always right.



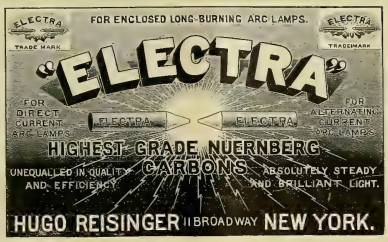
For long distance and hard worked phones, use the National No. 3 Carbon Porous Cup Cell; the largest open circuit cell in the field. Elements adapted to a standard 6 in. x 8 in. jar.

THE NATIONAL CARBON CO.

600 HIGHLAND AVENUE, - - - CLEVELAND, OHIO.

All genuine "ELECTRA" Carbons are put up in packages bearing a label with the TRADE MARK "ELECTRA."

Infringers of my trade-mark will be rigidly prosecuted to protect the interest of purchasers of my carbons.



Notice—The "ELECTRA" Highest Grade Nuernberg Carbons are, as heretofore, manufactured for me by the world-renowned firm of **C. Conradty, of Nuernberg,** who owns both the oldest as well as the **largest carbon works in existence,** and whose carbons are recognized as the standard all the world over.

Interior Thermostatic Electric Cables.

STANDARDIZED IN ALL B. & S. GAUGES.

DIEHL MANUFACTURING CO.,
ELIZABETHPORT, N. J.

BUYERS will find no better or more honestly made goods than those of the K. & W. Company of Pittsfield, Mass. Their Hardy Incandescent Lamp is justly celebrated for its sustained candle power. Their Arc Hanger Board—an absolute cut out—is a model of workmanship and design. Their Dynamo Brush is a cool and quiet runner, and their Commutator Compound does prevent sparking. They have a New York Office at 120 Liberty Street, and their Western representatives are Meysenburg & Badt, 1504 Monadnock Block, Chicago. Their prices are moderate and parties wishing agencies will do well to communicate with them.

Manufacturers

Of Desk, Bracket, Column and

Direct Current Ceiling Fans.

Fan Blades have 60-inch sweep. Full speed of two-blade fan 210 revolutions; intermediate speed 170; slow speed 145. Four-blade fan, full speed 175 revolutions; intermediate speed 140; slow speed 120.

Made for 110, 220 and 550 volts. Two blades or four blades, with or without incandescent lamp attachments.

Every motor tested at double the voltage at which it is rated. Every motor guaranteed.

Storage battery, 56 cells, 150 ampere-hours each; good condition and practically new, and 6 h. p. motor, 110 volts, and appurtenances for an electric launch equipment. **SINTZ GAS ENGINE CO.,** Grand Rapids, Mich.

NOTICE.

Plans and specifications adopted by the mayor and common council of the city of Fond du Lac, Wisconsin, relative to granting a telephone franchise on certain streets in said city.

RESOLVED, By the Mayor and Common Council of the city of Fond du Lac, Wisconsin, That whereas, an application for a franchise has been made for a telephone line along and upon Scott street west to Doty street, south on Doty street to Division street, thence east on Division street to Macy street, thence south on Doty street to Division street, thence east on Division street to Macy street, thence south on Macy street to Forest avenue, thence east on Forest avenue to the alley between Macy and Main streets, thence south on said alley to Remington Company's drug store in said city; and whereas, the franchises in said city must be by law sold and granted to the highest bidder therefor,

Therefore notice is hereby given to all whom it may concern or who may wish to bid for said franchise for said telephone line in said city, that bids therefor will be received sealed by the said common council of said city up to 8 o'clock p. m. of Monday, June 6th, 1898, addressed to City Clerk, F. A. Bartlett, Esq., Fond du Lac, Wisconsin.

And that the said franchise will on said date be granted to the highest and best bidder therefor, according to the plans and specifications now on file in the said city clerk's office.

That not more than $1.50 a month shall be charged to private houses, nor more than $2.50 to business houses per month, under said franchise, that the manager and treasurer of said company operating said franchise must once each year make and file with said common council a verified statement of the gross receipts for such business carried on under said franchise; and said bids must state what percentage the bidder will pay on the gross receipts a year under said franchise, if granted to him, into the treasury of said city for the use of said city; said telephone line or lines on said streets to be erected on poles firmly set in the ground where the street committee of said common council shall direct, and the poles not to be over two hundred and fifty feet apart, and the wires on said poles to be at least where fastened on said poles 30 feet above the earth just beneath, with two pins on said posts for the use of said city for wires, for fire alarm purposes only, and that these are the plans and specifications adopted by said mayor and common council for the maintenance and operation of said franchise, and that a certified check of the sum and amount of $200.00 shall accompany all bids as a guarantee of the acceptance of said franchise if granted to the bidder; and shall give bonds to the city in the sum of $300.00 by said bidder conditioned on the building, construction and operation of said plant and franchise within two months after its award and grant by the said common council to the bidder therefor, and that work under said franchise shall commence and continue in good faith under said franchise within one year after it is granted; and if not, then said franchise shall be null and void and of no effect.

And that these resolutions and specifications inviting bids for said franchise be published for three weeks, once each week, in the Fond du Lac Daily Commonwealth, in the Milwaukee Sentinel, and in the Telephone of Chicago, Illinois, to comply with chapter 370 of the laws of Wisconsin for the year 1897.

By order of the common council of Fond du Lac city, Wisconsin.

Dated May 2, A. D., 1898.

T. F. MAYHAM,
Mayor of the City of Fond du Lac, Wisconsin.

Attest: F. A. BARTLETT,
Clerk of the City of Fond du Lac, Wisconsin.

PROPOSALS.

Proposals will be received by the Board of Trustees of the Village of Western Springs, Ill., until 8 o'clock p. m. of Tuesday, May 24, 1898, for furnishing materials and labor for a complete street lighting plant according to the plans and specifications which may be seen in the office of W. H. Schott, 5504 South Halsted St., Chicago.

Parties submitting bids will be required to deposit with bid a certified check of 5 per cent. of the amount of their bid, payable to the treasurer of the village.

In case the successful bidder fails to enter into contract within five days after he has been notified of its acceptance he shall forfeit the check deposited. The successful bidder will be required to furnish an approved bond in such sum as may be decided by the trustees of Western Springs, said bond to indemnify the Village of Western Springs against accident during construction of plant, and the full compliance and completion of plant within 60 days from date of signing contract.

The village reserves the right to reject any or all bids. All bids must be addressed to C. Herman Jackson, clerk of said village. Plans may be seen and copies of specifications obtained by inquiring of W. H. Schott, 5504 South Halsted Street Chicago.

In Going to St. Paul and Minneapolis

The wise traveler selects the Chicago Milwaukee & St. Paul Railway.

Why?

It is the best road between Chicago and the Twin Cities.

It has the most perfect track.

Its equipment is the finest.

Its sleeping cars are palaces.

Its dining-car service is equal to the best hotels.

Its electric lighted trains are steam heated.

Its general excellence has no equal

It is patronized by the best people.

It is the favorite route for ladies and children as well as for men.

It is the most popular road west of Chicago.

It gives the choice of seven trains daily.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone
12. The Siemens, Kotyra, Naumayer and Scrivener Receivers.
CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
CHAPTER 28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser: Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines. The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony

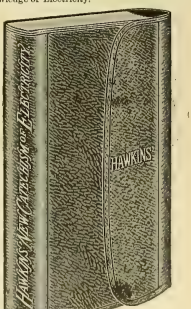
HAWKINS' NEW CATECHISM OF **ELECTRICITY.**

A PRACTICAL TREATISE.

TESTIMONIAL. Chas. M. Weir, Chief Engineer U. S. Projectile Works, Brooklyn, N. Y.: "It is one of the most practical and concise works on the subject I ever saw. It is just the right thing in the right place, and I most cheerfully recommend it to all who desire a practical knowledge of Electricity."



This is a book of 550 pp., full of up-to-date information. 300 illustrations. Handsomely bound in red leather, pocketbook form, size 4½x6¾, with titles and edges in gold. Price, $2.50, postpaid. 100 page descriptive catalogue of electrical books free on request.

ELECTRICIAN PUBLISHING COMPANY, 510 Marquette Building, Chicago.

Just Published.

PRACTICAL Guide for Firemen,

By W. H. WAKEMAN.

Price 75 Cents.

80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

CREOSOTED WOOD CONDUITS

FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; cables will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

—THE—

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. CAYETTY.

Price, ... $1.00

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come up on the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

Send for Copy.

ELECTRICIAN PUBLISHING CO.,

510 MARQUETTE BLDG., CHICAGO.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations. $1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Exp riments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations $1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages $1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 408 pages and 117 illustrations. Second edition. $2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Physical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. 424p. edition $2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical dynamo Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches $1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general underwriters' data, calculating sizes of wires, wiring fixtures, elevator, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches $1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, clevators, annes or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches. $1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 23 illustrations, 27 original tables $1.00

Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the co-t of Transmission Plants.

Bedell, Fred'k and Albert G. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations. 320 pages. 12mo, cloth $2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth $2.50

Hopkins, Geo. M. —Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated. $1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy $0.50

Hospitalier, E.—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations $2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-Written and greatly enlarged. Large 8vo. 563 pages, and 570 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition $4.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated. $0.50 [Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated. $1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 128 Illustrations $4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892. ... $7.25

In this edition is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Reference Book, Giving Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations $2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y. $1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 illustrations $0.25

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition $4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 360 Illustrations $3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations $1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tarewater, Electric Light and all his Principal Discoveries, etc.. $1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated $2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of Interior Wiring. Illustrated $1.00

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged $1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated $0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations $2.25

Salomons, Sir David.—Electric Light Installations. Vol. I. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893 ..... $1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated $1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering. 350 illustrations $3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised $1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated $1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated, paper $1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates $1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated. $0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66) $0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of $3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75) $0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages $6 00

Trevert.—How to Make Electric Batteries at Home. Illustrated $0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition, carefully revised, with additions $2.00

Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98). $0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated $1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895 ..... $1.00

The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

THE PELTON WATER WHEEL
Is known the world over as affording the most simple, reliable and economical power for all purposes.
9,000 WHEELS NOW RUNNING
Filling every condition of service in a most efficient and satisfactory way.
ELECTRIC POWER TRANSMISSION.
Pelton Wheels are especially adapted to this purpose and are operating the majority of stations of this character in all parts of the world. Highest efficiency and best regulation guaranteed. Catalogues furnished on application. Address
PELTON WATER WHEEL CO.,
143 Liberty Street, NEW YORK, N. Y., U. S. A.
or
121-123 Main Street, SAN FRANCISCO, CAL., U. S. A.

WATER WHEELS
For all Heads from 3 Ft. to 2000 Ft.
Especially adapted to all kinds of
ELECTRIC POWER AND LIGHTING PLANTS.
Recent tests at Holyoke enable us to guarantee:
The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.
State your Head and send for 124-page pamphlet.
JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

GRAPHITE FOR RESISTANCE...
Made in almost any form required and of 1 ohm or 1,000,000 ohms as desired. We also make graphite boxes and crucibles resisting heats of 4,000 degrees.

A VALUABLE NEW WORK.
ELECTRICIANS' HANDY-BOOK
OF USEFUL INFORMATION.
Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. HEBIER, 2d.
ILLUSTRATED.
A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.
This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopedia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.
CONTENTS.

PART		PART	
1.	History.	9.	Electric Lighting.
2.	Theory.	10.	Transformers.
3.	Measurements. (Electric and Magnetic.)	11.	Wiring for Electric Power.
4.	Electric Batteries.	12.	Wiring for Bell Fitting and Gas Lighting
5.	Electro-Chemistry and Metallurgy.	13.	Electric Railways.
6.	The Telegraph and Telephone.	14.	Miscellaneous.
7.	Dynamos and Motors.	15.	Useful Tables.
8.	Management of Dynamos and Motors.	16.	Logarithms.

Contains over four hundred and fifty pages and many illustrations.
PRICE, CLOTH, ONLY $2.50; POSTPAID.

THEY STILL USE IT.

Stover Bicycle Manufacturing Co.

FREEPORT, ILL., March 2nd, 1897.

IT COSTS SO LITTLE AND WORKS SO WELL

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. HANCE, Supt.

Cost per week: 10 to 40 h. p., 25c.; 40 to 80 h. p., 37½c.; 80 to 120 h. p., 50c.; 120 to 160 h. p., 62½c.; 160 to 200 h. p., 75c.

The Boiler Expurgator Co., MANUFACTURERS, CHICAGO, U. S. A.

A few agencies will be placed in large steam and manufacturing centers. Write us at once.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, $2.50; leather, $3.00.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, $1.50.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, $6.00.
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, $3.50.
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, 75 cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, $1.25.
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, 50 cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo. Illustrated, cloth, 50 cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, 75 cents; paper, 50 cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, 75 cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Inductive; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo, Armature; Commutator and Brushes; Controlling Magnet, Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Current Meters; Tangent Meters; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Compiling Dynamos Together in Series; in Simple Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armatures; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Change; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers, Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Inverted Strip Instruments; Diagram of Connections and Operation of Instrument. CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

Western Electrician.

$3 per Annum. Copyright, 1898, by Electrician Publishing Company, Chicago. EVERY SATURDAY. Entered at Chicago Postoffice as mail matter of the second class. 10 cents per Copy.

Vol. XXII. CHICAGO, MAY 28, 1898. No. 22

SIMPLEX INSULATED WIRES AND CABLES.

RUBBER COVERED, WEATHERPROOF, UNDERGROUND AND SUBMARINE.

WESTERN SELLING AGENT, H. R. HIXSON, 1137 Monadnock Block, CHICAGO.

Simplex Electrical Company, 75-81 Cornhill, BOSTON, MASS.

ALFRED F. MOORE,

MANUFACTURER OF

INSULATED ELECTRIC WIRE,

FLEXIBLE CORDS AND CABLES.

200 AND 202 NORTH THIRD STREET, - PHILADELPHIA, PA.

The Ansonia Electrical Co.,

ANSONIA, CONN.,

MANUFACTURERS OF

SHIELD BRAND MOISTURE-PROOF FEEDER AND LINE WIRES.

Magnet, Office, Damp-Proof Office and Annunciator Wires.

Hercules Trolley Wire,

Bells, Batteries, Annunciators and all House Goods Supplies.

OKONITE

TRADE MARK

1889—Paris Exposition, Medal for Rubber Insulation.

1893—World's Fair, Medal for Rubber Insulation.

THE STANDARD FOR RUBBER INSULATION.

Sole Manufacturers of

Okonite Wires, Okonite Tape, Manson Tape, Candee Weather-proof Wires.

THE OKONITE CO., LTD.

Willard L. Candee, M. Durant Cheever, } Managers. 253 Broadway, New York. Geo. T. Manson, Gen'l Supt. W. H. Hodgins, Secy.

JOHN D. CRIMMINS, JR., Prest.

ATLANTIC ALCATRAZ AAA ASPHALT COMPANY

Alcatraz Electrical Compound.

Absolutely unequaled for Insulating and Water-proofing; not affected by Acids or Alkalies; elastic and durable. Alcatraz Asphalt Paint is a tenacious and durable coating for all kinds of metal. Samples upon application.

Ask your nearest supply house for it, or

(Formerly California Asphalt Co.) **Atlantic Alcatraz Asphalt Co.,** 57 East 59th Street, NEW YORK.

THE "AMERICAN" FUEL ECONOMIZER.

THE BEST IN THE WORLD.

BROOMELL, SCHMIDT & CO., Ltd.

MANUFACTURERS,

YORK, PA., U. S. A.

Cable Address, Broomell, York. A B C Code, 4th Edition.

SPECIAL NOTICE.—We have no agents who are authorized to quote prices. Please communicate direct with us. We are always glad to send expert engineers to look over the ground and submit estimates, if requires an expert knowledge of the economizer business to properly determine what is required.

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed dust-proof cast-iron case which effectually shields the instruments from disturbing influences of external magnetic fields.

Weston Standard Illuminated Dial Potential Indicator, Style B. "Flush Type."

Weston Standard

Portable Direct Reading Voltmeters and Millivoltmeters, Ammeters and Milliammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

FIRST PRIZE, CASH, $50.00
SECOND " " $30.00
THIRD " " $20.00
FOURTH " " $10.00

"A good name is rather to be chosen than great riches." This is no doubt as true to-day as it was when it was uttered, but in the mad scramble for some of the loaves and fishes a great many people have doubtless forgotten how valuable a good name is.

We propose to choose a name for our lamp---we want it to be a good name---we offer cash prizes for the best name---competent disinterested judges to make the decision and award the prizes. We claim our new lamp to be the best lamp made. This is not a bluff, for we will gladly furnish samples for you to test with lamps of other makes. We make the best price and it is for this, our new lamp, we want the best name.

Enclosed Arc Lamps

To Burn Singly on 220 Volt Circuits.
150 Volts D. P. at Arc 2½ Amperes.

ARC LAMP SALES DEPARTMENT,

General Incandescent Arc Light Co.,

572 FIRST AVE., NEW YORK.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

LYNN, MASS.

WILLARD BATTERIES

AND

MOTOR VEHICLES.

With the advent of the Willard Battery the Motor Vehicle was made an assured success, and although the motor vehicle type of Willard Battery has been on the market but a year, yet its superiority is so manifest that it has been adopted by 90 per cent. of the manufacturers of electric motor vehicles, with every probability that the remaining 10 per cent. will adopt it when they have concluded their tests now in progress.

The motor vehicle type of Willard plate embodies all of the many superior qualities of the Willard Standard plate in points of electrical and mechanical construction—the rolled lead, the thin leaf, the angle of the leaf, the cup-shape groove, the immense surface, the perfect contact, the direct electrical path, the rapid action, the great conductivity, the uniformity of and provision for expansion, etc., etc., which features overcome all of the numerous faults developed by storage batteries in the past. To illustrate fully the many advantages of this construction would require many pages. But as an example of a single feature, we call your attention to the position of the thin leaves at an angle. This provision for the expansion of the active material as the years run along and the active material increases and expands the angle of the leaves is reduced, thus increasing the space between them and providing more room for the active material without loss of active material or any ill effect whatever. We claim the advantages of this feature are enormous. Many others have tried to restrain the acts of Nature. We have provided for them and consequently are free from all the bending, buckling, breaking and bridging that follow the other construction. The only differences between the Standard and the motor vehicle plates are that the motor vehicle plate is made of lighter weight rolled lead, the leaves are thinner, and they cross the plate at an angle and in relation to one another at opposite angles, one either side of the plate, and there is a greater amount of active material in the motor vehicle plate.

The positive plates of the motor vehicle type are surrounded by cellulose pulp and enclosed in patented hard rubber corrugated and perforated sheaths, which sheaths are firmly held between grooves in an improved hard rubber containing cell. The cover of the cell is so constructed that it may be removed at will. Likewise the positive plates may be removed at will, without interference with the negative plates and in a moment's time. The chief advantages of the Willard Motor Vehicle cell over the Standard cell are in weight and capacity. Thus a cell weighing 20 pounds will give 58 amperes in one hour, 81 in three hours, or 94 in five hours. Like all of the Willard Batteries the motor vehicle type will receive or give forth an enormous current. As an example, it may be charged in twenty minutes sufficiently to operate a carriage for ten miles. An examination of a Willard Motor Vehicle cell will show that no expense is spared to make it perfect in all ways. No attempt is made to create out of it a cheap article, and while a trifle more expensive than other batteries for this purpose, yet it is infinitely superior in actual results, and as a result a manufacturer of electrical motor vehicles can offer no greater inducement than the fact that his carriage is equipped with Willard Batteries. It is proof positive that at least in the essential feature his carriage or wagon is of the highest quality.

Beyond the motor vehicle type of battery we make a Standard type suitable for all applications of storage battery from small work to the largest central station or street railroad work, and a concentric type especially adapted to light work, such as telegraph, telephone, fire-alarm, etc., etc., and we respectfully solicit correspondence from parties interested in electric storage batteries for whatever kind of work.

ARMATURES TO REWIND.

Winders direct from T.-H. and Westinghouse shops. Work guaranteed. Ten years' experience. Light plants installed complete. Send for prices.

HODGE, WALSH & LORING,
701 Delaware St., **KANSAS CITY, MO.**

FOR SALE.

Storage battery, 55 cells, 150 ampere-hours each; good condition and practically new, and 6 h. p. motor, 110 volts, and appurtenances for an electric launch equipment. **SINTZ GAS ENGINE CO.,** Grand Rapids, Mich.

FOR SALE.

Electric lighting plant, in town of 1,500, within 40 miles of Chicago. 600 light alternator, profitable street lighting contract and commercial lighting; capacity of plant can be doubled; no competition. Will sell on easy terms, or exchange for second-hand electrical apparatus of standard make. **The Electrical Exchange,** 166-174 N. Clinton St., Chicago.

NOTICE.

Plans and specifications adopted by the mayor and common council of the city of Fond du Lac, Wisconsin, relative to granting a telephone franchise on certain streets in said city.

RESOLVED, By the Mayor and Common Council of the city of Fond du Lac, Wisconsin, That whereas, an application for a franchise has been made for a telephone line along and upon Scott street west to Doty street, south on Doty street to Division street, thence east on Division street to Macy street, thence south on Doty street to Division street, thence east on Division street to Macy street, thence south on Macy street to Forest avenue, thence east on Forest avenue to the alley between Macy and Main streets, thence south on said alley to Remington Company's drug store in said city; and whereas, the franchises in said city must be by law sold and granted to the highest bidder therefor,

Therefore notice is hereby given to all whom it may concern or who may wish to bid for said franchise for said telephone line in said city, that bids therefor will be received sealed by the said common council of said city up to 9 o'clock p. m. of Monday, June 6 h, 1898, addressed to City Clerk, F. A. Bartlett, Esq., Fond du Lac, Wisconsin.

And that the said franchise will on said date be granted to the highest and best bidder therefor, according to the plans and specifications now on file in the said city clerk's office.

That not more than $1.50 a month shall be charged to private houses, nor more than $2.50 to business houses per month, under said franchise, that the manager and treasurer of said company operating said franchise must once each year make and file with said common council a verified statement of the gross receipts for such business carried on under said franchise; and said bids must state what percentage the bidder will pay on the gross receipts a year under said franchise, if granted to him. Into the treasury of said city for the use of said city; said telephone line or lines on said streets to be erected on poles firmly set in the ground. The chairman of committee of said common council shall direct, and the poles not to be over two hundred and fifty feet apart, and the wires on said poles to be at least where fastened on said poles 20 feet above the earth just beneath, with two pins on said posts for the use of said city for wires for fire alarm purposes only, and that these are the plans and specifications adopted by said mayor and common council for the maintenance and operation of said franchise, and that a certified check of the sum and amount of $200.00 shall accompany all bids as a guarantee of the acceptance of said franchise if granted to the bidder; and shall give bonds to the city in the sum of $200.00 by said bidder conditioned on the building, construction and operation of said plant and franchise within two months after its award and grant by the said common council to the bidder therefor, and that work under said franchise shall commence and continue in good faith under said franchise within one year after it is granted; and if not, then said franchise shall be null and void and of no effect.

And that these resolutions and specifications inviting bids for said franchise be published for three weeks, once each week, in the Fond du Lac Daily Commonwealth, in the Milwaukee Sentinel, and in the Telephone of Chicago, Illinois, to comply with chapter 270 of the laws of Wisconsin for the year 1897.

By order of the common council of Fond du Lac city, Wisconsin.

Dated May 2, A. D., 1898.

T. F. MAYHAM,
Mayor of the City of Fond du Lac, Wisconsin.

Attest: F. A. BARTLETT,
Clerk of the City of Fond du Lac, Wisconsin.

Notice to Contractors and Builders of Electrical Plants.

Sealed proposals will be received at the office of the New Telephone Company, 803 Stevenson Building, Indianapolis, Indiana, until noon of the sixth day of June, 1898, for the furnishing of materials and labor necessary for the construction of a complete telephone plant in the City of Indianapolis, Indiana.

There will be required in this work, approximately, 250,000 feet of conduit; 200,000 feet of lead-incased cable; 2,000 miles of copper wire, and 3,000 telephones.

Each bidder must submit samples of the materials covered by his proposition.

Bids will be received covering any portion of the work required, as well as upon the plant as a whole.

Each bid must be accompanied by a certified check for $1,000 as a guarantee of good faith. The successful bidder will be required to enter into a satisfactory bond for the completion of the work within nine months from the date of contract.

Plans and specifications may be seen at the office of the company.

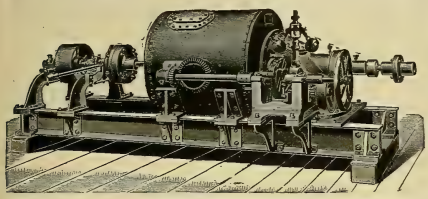
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 86 H. P. under 35 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts and where the situation admits of their use we recommend them.

BELL APPARATUS

FOR THE

Independent Telephone Field.

SWITCHBOARDS, DISTRIBUTING BOARDS, CABLE TERMINALS, POLE TOP CABLE TERMINALS, PROTECTORS, LIGHTNING ARRESTERS, and LINE FUSES, practically the same as those in use in modern Bell Exchanges.

A complete protective system insuring absolutely against damage from lightning, electric-light or trolley-wire currents.

We manufacture this line of apparatus.

We are prepared to equip and install complete telephone exchanges of any size, from 100 to 10,000 subscribers, with apparatus similar to that used by the Bell Co.

We guarantee our material, workmanship and patents.

—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; les will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

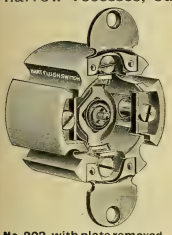
HART FLUSH SWITCHES.

BEST and CHEAPEST.

As here illustrated, we make Flush Switches with both Round and Rectangular Bases. Our ROUND style Base will fit our regular Iron Frames and Boxes. Our RECTANGULAR Bases are adapted for narrow recesses, such as Frames and Boxes usually used for "Push Button" Flush Switches. You will therefore note that if some other style of Flush Switch which you have in use causes trouble, you can replace it with a



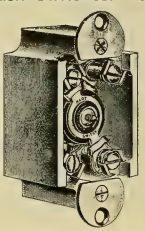
No. 202, with plate removed.

HART FLUSH SWITCH

without disturbing your own frame or box. Simply take out the defective Switch and replace it with a HART.

For full particulars, see our Illustrated Catalogue, pages 14 and 28.

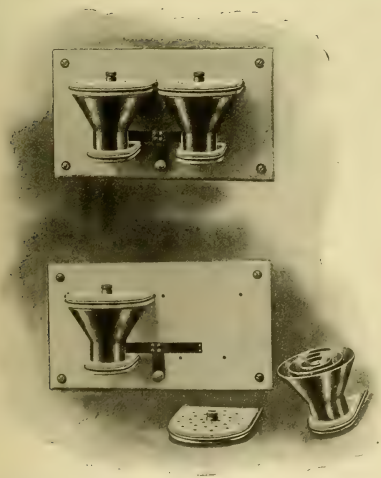
All Electrical Supply Houses carry these Switches in stock, and can fill orders without delay.



No. 602, with plate removed.

Make your orders read "HART" Switches, and you will be well satisfied with value received.

THE HART & HEGEMAN MFG. CO., Hartford, Conn.



NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

STANLEY ELECTRIC MANUFACTURING COMPANY,

VULCANIZED FIBRE.
Highest grades for electrical insulation and mechanical purposes, in sheets, tubes, rods and special shapes. Catalogues and samples on application.
VULCANIZED FIBRE CO., - Wilmington, Del.

A TECHNICAL EDUCATION 50 CENTS A WEEK.
The new installment plan of The International Correspondence Schools, Scranton, Pa.,—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.
CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

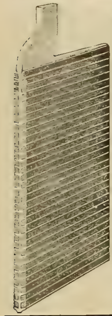
PERU ELECTRIC MANUFACTURING CO. PERU, IND.



Nature's Laws and — WILLARD BATTERIES Work in Harmony.

What we claim for the Willard Battery is, that its mechanical and electrical construction is so obviously correct that any one familiar with storage batteries of the past and present and their hereditary defects can determine at a glance that all such defects are provided against, and that it is built on lines in such harmony with the inexorable laws of Nature as will insure harmonious action of the parts and consequent long and serviceable life. While we claim electrical superiority in the Willard plate, yet we maintain that the greatest faults of past and present batteries lie in their mechanical construction, and so great are these errors and so general are they, that you will find it difficult to find a storage battery that has lived to a ripe old age and gradually worn out in a theoretically natural way, while the generality will be found to have met with a violent death at an early age, which is directly attributable to their mechanical construction.

The rigid supports in all various styles and shapes lead in promoting havoc, and all of the numerous cases of violence to self is directly due to such like attempts to restrain Nature. The broken supports, shelves, grids, receptacles and pellets, the bending, buckling, warping, and other distortions of the plates, pellets and parts are all the progeny of mechanical restraint. Consequently, one of the greatest features of the Willard plate is its provision for the laws of Nature. Sufficient room is left for the expansion and growth of the active material, and any disposition to restrain Nature is entirely absent: on the contrary, Nature is a full partner in the Willard plate. While other plates are vainly attempting to prevent the expansion occasioned by the electric action and the growth of the active material, and making such poor success as to gradually become more distorted and less recognizable, the Willard having provided for and invited the assistance of Nature, improves with age as the active material increases and only ceases to perform its functions when, after a long period of time, it has in a natural way gradually worn away.

We show on this page a cut of the Willard plate, which will exhibit its construction. It is made from a single piece of pure rolled lead, of the same original thickness throughout. The thin leaves or shelves that you see are integral with the web or support; they are a part of the original plate of lead, and have never been detached therefrom: the angle of the leaves admits of the expansion and growth of the active material, with no ill effects whatever to the plate.

If the reader will call to mind all of the defects in storage batteries that his experience has developed and trace each one back to its source, and compare the troublesome feature with this plate, we think he will find the same is entirely overcome.

We are equipped for the manufacture in large quantities of batteries of all sizes and for all purposes, and we invite anyone interested to examine and test our product, and will supply goods for this purpose at special prices.

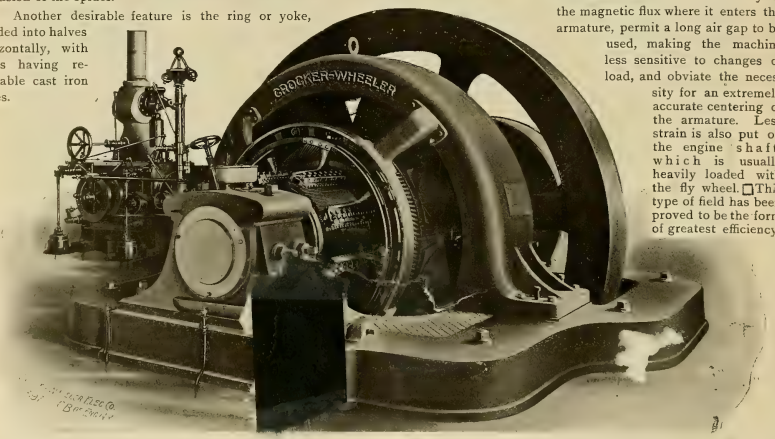
AND AMPERE, N. J.

Direct-Connected Power Generators.

THE fine appearance of a perfectly designed dynamo may be the least important feature to be considered, but when the form resulting in pleasing appearance contributes largely to the success of the machine, mechanically and electrically, the desirability of such a feature is twofold. Such a machine of 300 KW capacity, direct-connected to a Corliss engine, is herein illustrated. The frame shows finely rounded lines, but is nevertheless of girder form; the inverted webs or curtains, besides strengthening the ring against collapse, serve to protect the field coils placed between them.

The armature is wound with cables threaded through slots in the periphery of the core, making it thoroughly iron clad and superior to those with bar windings, while the commutator of large diameter and face giving ample capacity is mounted on a sleeve extension of the spider.

Another desirable feature is the ring or yoke, divided into halves horizontally, with poles having removable cast iron shoes. These shoes reduce the density of the magnetic flux where it enters the armature, permit a long air gap to be used, making the machine less sensitive to changes of load, and obviate the necessity for an extremely accurate centering of the armature. Less strain is also put on the engine shaft, which is usually heavily loaded with the fly wheel. ☐ This type of field has been proved to be the form of greatest efficiency.



Brush rigging supported by brackets fastened to the yoke so that it is entirely independent of outboard bearing, with the arrangement of the conductors so that the brushes and holders may be renewed or adjusted while the machine is running, are other of its up-to-date features.

The brush holders are of the parallel movement type, the brush being firmly clamped in a holder which moves radially to and from the commutator, so that the brushes are always perpendicular to the surface of the commutator.

These machines are capable of carrying their full rated current continuously without rising in temperature more than 45° C. above the surrounding atmosphere.

The full load commercial efficiency varies with the size, from 94 per cent. to 88 per cent. The light load efficiency is unsually high.

Although designed principally for use as direct dynamos, these machines can be mounted on frames adapted for the purpose, and used as motors or belted dynamos.

They are made in seven sizes, namely: 300 KW, 200 KW, 150 KW, 100 KW, 75 KW, 50 KW, and 30 KW, varying in speed from 100 to 300 r. p. m.

Speeds, dimensions, weights, prices, and other information, may be had by application to the following Selling Agents:

The only book of its kind in the English Language. **Price, $2.00.**

ELECTRICIAN PUBLISHING COMPANY,

Suite 510 Marquette Building, Chicago.

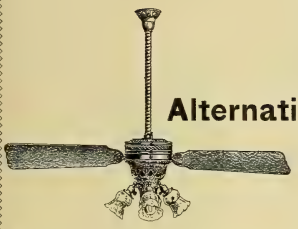
PAPER COVER, PRICE $1.00.

TUERK'S 1898 CEILING

...FANS...

—FOR—

Alternating and Direct Current.



Direct Current.

Made for two speeds, 135 and 190 revolutions.
Sweep of blade, 60 inches; width 8 inches.
Made for 110, 170, 220, 500 volts, with or without Electrolier.

High Economy,
Self-Oiling Bearings,
Adjustable Blades,
Starting Switch
at Bottom.

Hunter Fan & Motor Co.

111 Bridge St., FULTON, N. Y.

E. B. LATHAM & CO., General Agents,
136 Liberty Street, New York.

WALKER & KEPLER,
Philadelphia, Pa.

Alternating Current.

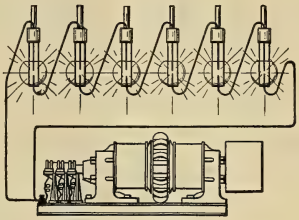
Speed 150 revolutions. Sweep of Blades, 5 feet;
Width of blades, 8 inches.
Made for 60, 125 and 140 cycles, 52 to 120 volts.

THE BRUSH ELECTRIC COMPANY

BRUSH

THE BRUSH ELECTRIC COMPANY

Brush apparatus has been on the market for twenty years. A majority of customers order supply parts direct from us. Many do not. We want this trade and are reducing our prices in order to secure it. Ask for quotations and send orders to the nearest Sales Office.



SERIES ARC LIGHTING.

SALES OFFICES:

Schenectady, N. Y.
Cleveland, Ohio.
Boston, Mass., 180 Summer Street.
New York, N. Y., 44 Broad Street.

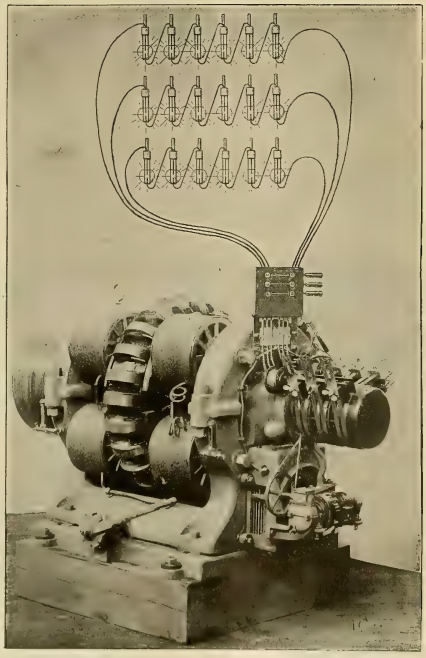
Montgomery, Ala	480



BRUSH MULTI-CIRCUIT 125-LIGHT ARC DYNAMO—1898.

Over 60,000 lights' capacity in large Brush arc dynamos sold. A large proportion of them using Multi-Circuit Dynamos.

The newly designed Brush dynamos have the following capacities: 55, 80, 100, 125, 240, 300, 2,000 candle power lights; 45, 85, 120, 160, 1,200 candle power lights.

Brush arc lamps were first used in 1877. More of them being sold to-day than ever before.

Two or more separate circuits run direct from one dynamo with any distribution of load on the different circuits. The advantages are absolute flexibility in handling of circuits; reduction of high voltages on circuits run from large dynamos; use of large units with corresponding increase of efficiency; saving in floor space, oil, belts, shafting, pulleys, attendance.

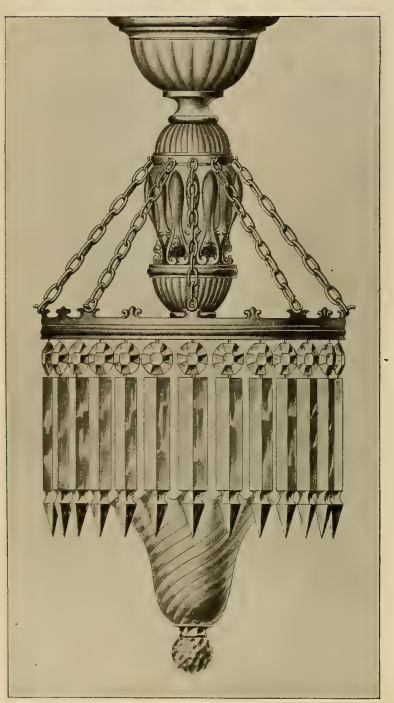
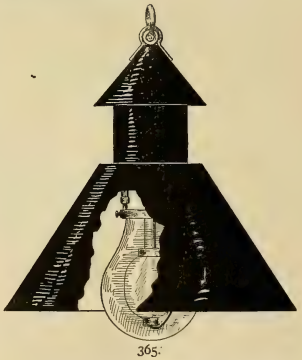
MacINTIRE ARC LAMPS.



347.
PRISMATIC ARC LAMP. Long Life.
With Canopy. Drop from Ceiling, 22 Inches.

347.
REFLECTOR LAMP FOR LOW CEILINGS.



365.
OUTSIDE REFLECTOR LAMP.

THE records established by the MacIntire Arc Lamp in the past and lately emphasized at the Electrical Show at Madison Square Garden, May 1st to 4th, have demonstrated a most radical departure in Arc Lamp architecture and have stamped them, in construction and high efficiency, a vast and sweeping advance in the Arc Lamp world. Our lamps for all service, large and small interiors, street and park illumination, are unsurpassed. They have received the highest commendations from the public at large, the press, electrical engineers and experts, from Europe as well as the United States.

MINNEAPOLIS, MINN., April 18, 1898.
The Cincinnati Corrugating Co., Piqua, Ohio.
Gentlemen:—We have yours of the 2nd inst. regarding the effectiveness of your **Patent Edge Corrugation**, and in reply would say that this material gives excellent satisfaction, both to ourselves and to our customer. It makes a very nice-looking job and is certainly as water-tight when lapped one corrugation side lap as the ordinary sheets are if lapped one and a half or even two corrugations at the sides of the sheets. At the same time quite a percentage of material is saved. We remain, Yours truly,
THE GILLETTE-HERZOG MFG. CO.
By Frank J. Llewellyn, Chief Engineer.

THEY STILL USE IT.
Stover Bicycle Manufacturing Co.
FREEPORT, ILL., March 2nd, 1897.
The Boiler Expurgator Co., Chicago, Ill.
Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.
Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

IT COSTS SO LITTLE AND WORKS SO WELL

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**

The rapid advance of electrical science made it absolutely necessary to revise the last edition and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50.**

The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1 25.**

A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.

This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.

The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.

The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.

The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Fishing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Are Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Action of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo, Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Commutator.—CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit, Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Are Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Are Lamps; In Series; The Westinghouse Are Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Are Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter, Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

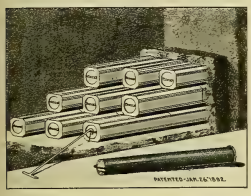
The Warren Electric & Specialty Co.,

WARREN, OHIO.

Manufacturers High-Grade Anti-Trust Incandescent Lamps.

The H. B. Camp Co.'s Vitrified Clay Conduit



For UNDERGROUND TELEPHONE, TELEGRAPH and ELECTRIC LIGHT WIRES, and UNDERGROUND TROLLEY SYSTEM FOR ELECTRIC STREET RAILWAYS. . . . . .

Manufactured by The H. B. CAMP CO., Aultman, Ohio.

Our conduit is made of specially prepared clays, is thoroughly vitreous and glazed, making it acid, gas and water proof, and is not affected by electrolysis. Standard size is 3 inch internal diameter. However, we can make any size or multiple duct. Our patent mandrel used in laying our conduits prevents the possibility of shoulders, and insures good alignment of bore. We claim for strength, economy, durability, cheapness and perfect insulation it is the best, and is used by the most prominent companies. Any information promptly given. Write for catalogue.

THE H. B. CAMP CO., - AULTMAN, OHIO, U. S. A.

WANTED---FOR CASH.

CHICAGO'S LEADING METAL HOUSE. ESTABLISHED 1885.

500,000 lbs. of Bare Copper Trolley Wire.
250,000 lbs. of Ordinary Bare Copper Wire (Scrap).
250,000 lbs. of Insulated Copper Wire.
125,000 lbs. of Heavy Red Brass (Scrap).
125,000 lbs. of Heavy Yellow Brass (Scrap.)
125,000 lbs. of Light Sheet Brass.
5,000 lbs. of Platinum, at $9.00 per troy oz.

Any of the above bought in large or small quantities.

We supply the electrical trade with our high-grade Babbitt Metal, Solder and Cotton Waste. Give us a trial order and you will find we will save you money.

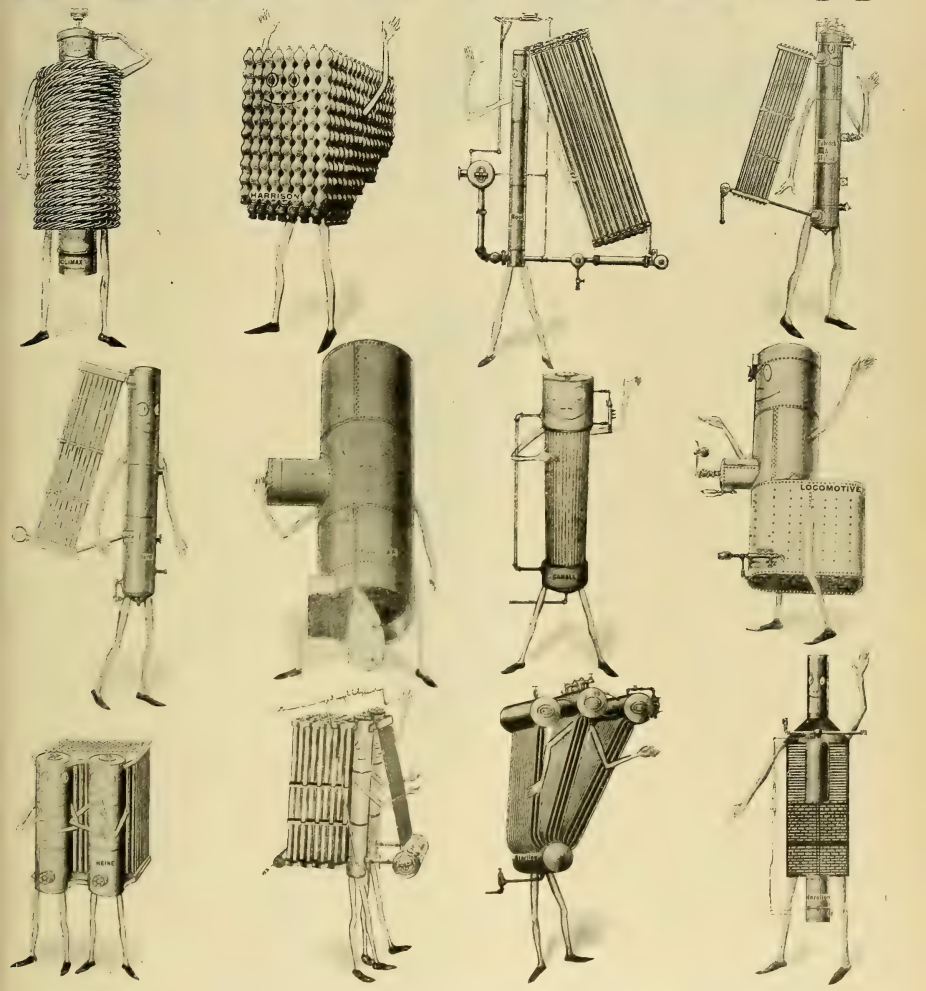
A FEW OF OUR PATIENTS!



OWNERS OF BOILERS—IMPORTANT.

Every modern physician recognizes the fact that no one medicine acts as efficiently or in the same manner on every human body, hence the common expression "What's one man's meat is another's poison," and so it is with the Steam Boilers. A quack medicine (a boiler compound) may hit the mark once in a hundred, but with the many different waters' as with the human being, the quack medicine misses.

The Dearborn Drug & Chemical Co. diagnoses your boiler's disease by analysis of the water and prescribes to suit its particular case—bear in mind, *prescribes especially* to cure *your* boiler of *its own particular disease.*

Figure and scheme as long as you wish, you'll find in the end this is the only *way* permanently to overcome boiler troubles—viz., by chemical analysis—our plan. Drop us a line and you'll receive interesting information.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

A "PEACE" OF WAR.

"A horse, a horse; me kingdom for a horse."—Dick III.

Have you heard how **CERVERA,** locked up in the bay,
Is crying for Out-Let Boxes to-day?
To have the Ward Leonard Co.'s is his desire,
For these are the ones that protect against fire.

Many hundred styles made—all lined with the well-known Carpenter enamel or with japan. 81,000 installed in New York City alone last year.

SCHLEY the brave and **SAMPSON** bold
Of Circuit Breakers should be told,
So **BLANCO** can't communicate
And let **SAGASTA** know his fate.

Ward Leonard Circuit Breakers—most perfect types. Cheap in price but not in construction.

WEST ON to Manila we're sending a fleet
With powder and shrapnel and soldiers and meat.

Weston electrical instruments known the world over.

DEWEY sell them? We do.

Our brave soldier boys, who to Cuba will rush,
Must be **HARDY** and tough to keep up with the "push."

Hardy Incandescent Lamps keep up their candle power in any climate.

Strategist **MILES** will ride at their head
On Helios' chariot which **Spaniards** will dread;
Then there'll be light, bright light and fight,
The Spaniards must yield then; success to the right.

Remember Helios Arc Lamps. Their light shines long, steady and bright.

ARMORDUCT.

THE LATEST THING IN INTERIOR CONDUIT.

Our "Armorduct" is a heavy steel tube enameled inside and outside by a special and exclusive process.

This coating of enamel will not crack in bending, is not affected by acids or cements and remains hard and firm at all temperatures up to 500 degrees.

Armorduct is rapidly displacing all other tube for interior conduit work. Write us for prices, samples, etc.

701 Delaware St., **KANSAS CITY, MO.**

FOR SALE.

Storage battery, 56 cells, 150 ampere-hours each; good condition and practically new, and 6 h. p. motor, 110 volts, and appurtenances for an electric launch equipment. **SINTZ GAS ENGINE CO.,** Grand Rapids, Mich.

FOR SALE.

Electric lighting plant, in town of 1,500, within 40 miles of Chicago. 500 light alternator, profitable street lighting contract and commercial lighting. Capacity of plant can be doubled; no competition. Will sell on easy terms, or exchange for second-hand electrical apparatus of standard make. The Electrical Exchange, 166-174 S. Clinton St., Chicago.

NOTICE.

Plans and specifications adopted by the mayor and common council of the city of Fond du Lac, Wisconsin, relative to granting a telephone franchise on certain streets in said city.

Resolved, By the Mayor and Common Council of the city of Fond du Lac, Wisconsin, That whereas, an application for a franchise has been made for a telephone line along and upon Scott street west to Doty street, south on Doty street to Division street, thence east on Division street to Macy street, thence south on Macy street to Forest avenue, thence east on Forest avenue to the alley between Macy and Main streets, thence south on said alley to Remington Company's drug store in said city; and whereas, the franchises in said city must be by law sold and granted to the highest bidder therefor, therefore notice is hereby given to all whom it may concern or who may wish to bid for said franchise for said telephone line in said city, that bids therefor will be received sealed by the said common council of said city up to 8 o'clock p. m. of Monday, June 6th, 1898, addressed to City Clerk, F. A. Bartlett, Esq., Fond du Lac, Wisconsin.

And that the said franchise will on said date be granted to the highest and best bidder therefor, according to the plans and specifications now on file in the said city clerk's office.

That not more than $1.50 a month shall be charged to private houses, nor more than $2.50 to business houses per month, under said franchise, that the manager and treasurer of said company operating said franchise must once each year make oath and file with said common council a verified statement of the gross receipts for such business carried on under said franchise; and said bidder shall pay what percentage the bidder will pay on the gross receipts a year under said franchise, if granted to him, into the treasury of said city for the use of said city; said telephone line or lines on said streets to be erected on poles firmly set in the ground where the street committee of said common council shall direct, and the poles not to be over two hundred and fifty feet apart, and the wires on said poles to be at least where fastened on said poles 30 feet above the earth just beneath, with two pins on said posts for the use of said city for wires, for fire alarm purposes only, and that these are the plans and specifications adopted by said mayor and common council for the maintenance and operation of such franchise, and that a certified check of the sum and amount of $200.00 shall accompany all bids as a guarantee of the acceptance of said franchise if granted to the bidder; and shall give bonds to the city in the sum of $500.00 by said bidder conditioned on the building, construction and operation of said plant and franchise within two months after its award and grant by the said common council to the bidder therefor, and that work under said franchise shall commence and continue in good faith under said franchise within one year after it is granted; and if not, then said franchise shall be null and void and of no effect.

And that these resolutions and specifications inviting bids for said franchise be published for three weeks, once each week, in the Fond du Lac Daily Commonwealth, in the Milwaukee Sentinel, and in the Telephone of Chicago, Illinois, to comply with chapter 370 of the laws of Wisconsin for the year 1897.

By order of the common council of Fond du Lac city, Wisconsin.

Dated May 3, A. D. 1898.

T. F. Mayham,
Mayor of the City of Fond du Lac, Wisconsin.

Attest: F. A. Bartlett,
Clerk of the City of Fond du Lac, Wisconsin.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The Company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, market and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory, a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address

A NEW THING!

Central Energy Telephone System.

THE SYSTEM OF THE FUTURE.

All the parts subject to deterioration and wear placed at Central Office, leaving nothing at subscribers' stations requiring attention. Reducing cost of maintenance to practically nothing.

CONVENIENT, DURABLE, ECONOMICAL.

The only system of its kind on the market. Our Transmitter and Receiver not being affected by the greatest variations in temperature or atmospheric changes, and being locked to prevent all opening by inexperienced persons, leaves no possible cause for readjustment. They are the only instruments that can be used satisfactorily in such systems. Users of our regular equipment can readily change to the "system of the future."

TYPE "ZZ"

"THE FLOWER OF THEM ALL."

COMMON BATTERY SET, STYLE A.

OUR COMMON BATTERY SYSTEM.

FEATURES:

All batteries calling and talking, located at central. No magneto generators; removing the receiver from hook calls the exchange.
One to twenty stations on a circuit.
Long-distance transmitter and new Bell double-pole receiver, short bandle.
We furnish instruments and switchboard complete at one-third less cost of the old magneto systems with induction coils.
Our transmitters were designed specially for the U. S. navy to use in their divers' helmets. Positively no packing, as the sane might prove fatal to a diver.

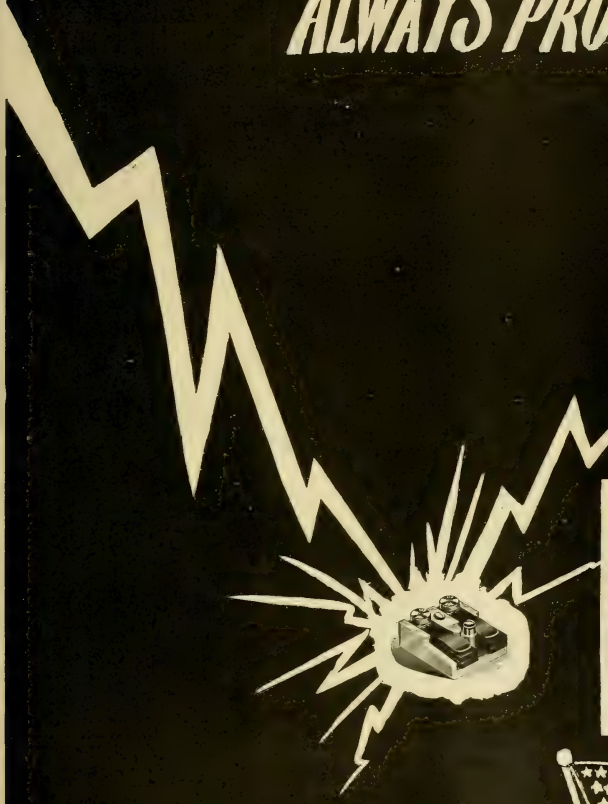
ALWAYS PROTECTED!



FOR TELEPHONE MEN!

We are now issuing a number of descriptive circulars of decided interest to telephone men which it will be well worth your while to have in your files. You should know about the American Carbon Lightning Arrester illustrated in the accompanying advertisement. A circular of great interest, too, is one under the head of "Party Line Service," being an explanation of advantages gained by use of "bridging" bell telephones on long lines with a number of stations connected, etc. etc. You will the better appreciate the need of having our circular matter on hand when you realize that American telephone apparatus is in use in over 500 progressive independent telephone exchanges in the navy and on over 100,000 telephones in all. Remember, we own carbon works in the natural gas district and from this intimate knowledge of the manufacture of carbon specialties are able to supply the only perfect granulated carbon transmitters that have ever proven by the test of time to be such. Above all things bear in mind **you are protected** in the use of our apparatus, as we guarantee workmanship, material and efficiency of our apparatus to be of the HIGHEST GRADE, and agree to defend at our own expense any action at law which may be brought against our PATRONS on alleged infringement of patents owing to the use of our instruments.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 260 pp. 208 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McMannan, edited by Prof. O. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 608 pages. 323 illustrations. Price $4.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 468 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 25 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 316 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 8 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG. CHICAGO.

A Cordial Invitation

Is extended every convention delegate and others interested in telephony to visit the establishment of the

FARR TELEPHONE & CONSTRUCTION SUPPLY CO.,

357 Dearborn Street, CHICAGO,

The only wholesale telephone supply house in the West. *We **manufacture everything used in Telephony*** and shall be pleased to receive your orders.

TELEPHONES

FOR

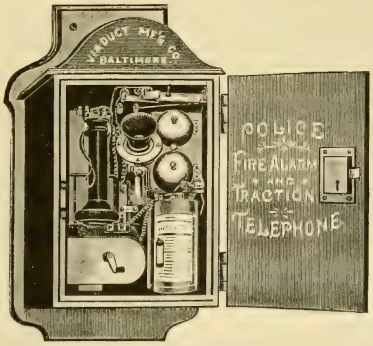
Trolley Purposes.

A desirable adjunct to a well equipped **RAILROAD** when made **WEATHER-PROOF** as this one is.

Send for Catalogue.

VIADUCT CO.

BALTIMORE.



We make from the stump, every part of our large assortment of

Telephones, District Telegraph, Fire Alarm and Trolley Systems.

THE GENERAL PRINCIPLES

OF

Telephony

Are Now Well Established.

THE

TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB,

Deals with them. No matter what kind of Telephones and Switching Apparatus you use, or expect to use,

YOU WILL FIND IT USEFUL.

It is a Practical Book
for the Practical Man
and for the Student.

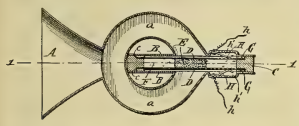
PRICE $1.00 POSTPAID.

ELECTRICIAN PUBLISHING CO.,

510 Marquette Building, CHICAGO.

THE DOUBLE DIAPHRAGM

of the **Wilhelm Transmitter** secures a double compression of the carbon granules in the pocket between them, greatly increasing the volume, distinctness and carrying value of the voice. Will not "pack" under any circumstance, and cannot be injured by rough handling or pencil jabbing.



Recognized by experts as containing features that place it far ahead of all others.

WILHELM TELEPHONE MFG. CO.,
Caxton Building, Buffalo, N. Y.

"FILLS A LONG FELT WANT"
—IN THE—
"INDEPENDENT FIELD."

A thoroughly reliable Automatic Pay Station Instrument, sent on 30 days' trial to responsible Telephone Companies. Send for Price List and Catalogue of our Pay Station Instruments and Sound-Proof Booths.

BELL APPARATUS
FOR THE
Independent Telephone Field.

SWITCHBOARDS, DISTRIBUTING BOARDS, CABLE TERMINALS, POLE TOP CABLE TERMINALS, PROTECTORS, LIGHTNING ARRESTERS, and LINE FUSES, practically the same as those in use in modern Bell Exchanges.

A complete protective system insuring absolutely against damage from lightning, electric-light or trolley-wire currents.

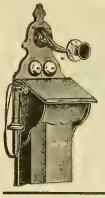
We manufacture this line of apparatus.

We are prepared to equip and install complete telephone exchanges of any size, from 100 to 10,000 subscribers, with apparatus similar to that used by the Bell Co.

We guarantee our material, workmanship and patents.

STERLING ELECTRIC CO.,
71 and 73 W. ADAMS ST.,
Main Office, First Floor. CHICAGO.

NORTHWESTERN Telephone Mfg. Co.
Offices, 43 and 44 Loan and Trust Bldg.,
MILWAUKEE, WIS.



Telephones, Switchboards, Magneto Bells, etc. Over 15 years of practical experience in the service with the licensees of the American Bell Telephone Co. a sufficient guarantee of the safety and efficiency of our apparatus. All of our telephones are equipped with a Solid Back Transmitter, identical in principle with that utilized by the American Bell Telephone Co. for transmitting articulation a distance of 2,000 miles.

Send for prices and mention this paper.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells; Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electrochemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism; Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Shocks.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer. Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and Known Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Quantity; Farad; Microfarad; Condenser; Capacity of Condenser; Changing Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Solution as a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Anodes for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.** Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operating Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vacuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Fuses; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curves; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Proper Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Allowing to Fall of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

Electrician Publishing Co.,

510 MARQUETTE BUILDING, CHICAGO.

THE "LIGHT OF EXPERIENCE."

NEW MANHATTAN ENCLOSED ARC LIGHT

DIRECT AND ALTERNATING CIRCUITS.

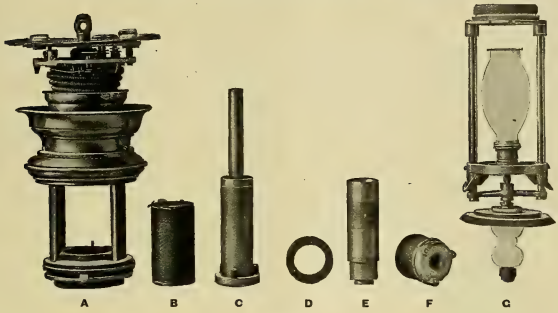

FIGURE 1.

The above cut shows all the parts of the **New** D. C. Manhattan Lamp.

To assemble the lamp the magnet coil *B* is placed in the body *A*. The magnet tube *C* is then inserted, which is locked in position by the nut *D*. Then the armature *E* is inserted within the magnet tube and the same is held in position by the nut *F*. The globe and trimming device *G* is then screwed on to the body of the lamp, when the lamp is assembled and ready to burn. To take the lamp apart the reverse operations are performed while the lamp hangs in position.

MULTIPLE ON 110 V. CIRCUITS, D. C. **MULTIPLE ON 220 V. CIRCUITS, D. C.**

SERIES ON 200 TO 600 V. CIRCUITS, D. C.

ALTERNATING ON ANY CIRCUITS FROM 7,000 TO 17,000 ALTERNATIONS.

FIGURE 2.

Figure 1—Shows the fewness and the substantiality of the parts of the lamp and the ease of assembling.

Figure 2—Shows the Standard D. C. and A. C. Lamps for inside service.

Figure 3—Shows the lamp with the inner bulb lowered for trimming. All other lamps in the market lower the outer globe to give access to the parts for trimming. We have introduced the novel feature of lowering the inner bulb, carbon and sheath down through the opening in the outer globe on telescoping side rods.

FIGURE 3.

All the recognized valuable features of the OLD type MANHATTAN lamp are retained in the NEW type, with all of the objectionable features eliminated.

THE RECOGNIZED STANDARD OF ENCLOSED ARC LAMPS.
LENGTH 29 INCHES.

16,000 MANHATTAN LAMPS IN SERVICE.

Manhattan General Construction Company,

11 BROADWAY, NEW YORK.

WE WILL PAY 12c. PER LB. FOR SCRAP COPPER

WE WILL PAY 2 CENTS

Each at our factory for **100,000** burned out lamps. A special price for series lamps on bases.

If, instead of selling them to us, you want them renewed and returned, it will cost 12 cents each.

They will go back BETTER lamps than you had in the first place; we clean the bulbs until they are as clear as crystal; we use the finest cellulose filaments, that in purity, density and surface are UNSURPASSED by any.

You will be perfectly satisfied with the results.

We will supply Central Stations and other large consumers with the best quality of Renewed Lamps at 13 cents in barrel lots. Send in your old lamps.

We also manufacture a Superior Quality of Copper Dynamo Brushes and Commutator Springs.

JERSEY ELECTRIC COMPANY,

744 Broad Street, - - - - NEWARK, N. J.

CUTS

WE MAKE CUTS OF ALL KINDS.

Readers of this journal, in need of cuts, will do well to get our prices before ordering elsewhere. 20 years in the business.

CHICAGO ELECTRO. AND STEREOTYPE CO.,
149-155 PLYMOUTH PLACE, CHICAGO, ILL.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 200 pages.....$1.00

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course (or First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 256 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 8 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.....$1.00

Badt, Liest. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00

Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for students and Engineers. Second edition. 125 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternate Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 30 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.50

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams. Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. 12mo.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents: Chapter I. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents. 8vo, cloth. In active preparation.

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon, John.—Electrical Experimental Science. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference. $1.00

Haskins, G. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised.....$1.50

Haskins.—Transformers. Their Theory, Construction and Application. Simplified. 50 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$5.00

Herzog.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics. 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity, Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitaller, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. 1901 illustrations.....$2.00

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 962 pages, and 670 illustrations.....$6.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivision and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated. $0.50
Vol. 96 Van Nostrand's Science Series.

Kapp, Gisbert.—Alternating Curre ts of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1897.....$7.50
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

SIMPLEX INSULATED WIRES AND CABLES.

RUBBER COVERED, WEATHERPROOF, UNDERGROUND AND SUBMARINE.

WESTERN SELLING AGENT. H. R. HIXSON, 1137 Monadnock Block, CHICAGO. *Simplex Electrical Company,* 75-81 Cornhill, BOSTON, MASS.

ALFRED F. MOORE,

MANUFACTURER OF

INSULATED ELECTRIC WIRE,

FLEXIBLE CORDS AND CABLES.

200 AND 202 NORTH THIRD STREET, - PHILADELPHIA, PA.

The Ansonia Electrical Co.,

ANSONIA, CONN.,

MANUFACTURERS OF

SHIELD BRAND MOISTURE-PROOF FEEDER AND LINE WIRES.

Magnet, Office, Damp-Proof Office and Annunciator Wires.

Hercules Trolley Wire,

Bells, Batteries, Annunciators and all House Goods Supplies.

OKONITE

TRADE MARK.

1889—Paris Exposition, Medal for Rubber Insulation.
1893—World's Fair, Medal for Rubber Insulation.

THE STANDARD FOR RUBBER INSULATION.

Sole Manufacturers of

Okonite Wires, Okonite Tape, Manson Tape, Candee Weather-proof Wires.

THE OKONITE CO., LTD.

Willard L. Candee, M. Durant Cheever, Managers. 253 Broadway, New York. Geo. T. Manson, Gen'l Supt. W. H. Hodgins, Secy.

JOHN D. CRIMMINS, JR., Pres't.

ATLANTIC ALCATRAZ AAA ASPHALT COMPANY

Alcatraz Electrical Compound.

Absolutely unequaled for Insulating and Water-proofing; not affected by Acids or Alkalies; elastic and durable. Alcatraz Asphalt Paint is a tenacious and durable coating for all kinds of metal. Samples upon application.

Ask your nearest supply house for it, or

(Formerly California Asphalt Co.) Atlantic Alcatraz Asphalt Co., 57 East 59th Street, NEW YORK.

THE "AMERICAN" FUEL ECONOMIZER.

THE BEST IN THE WORLD.

BROOMELL, SCHMIDT & CO., Ltd.

MANUFACTURERS,

YORK, PA., U. S. A.

Cable Address, Broomell, York. A B C Code, 4th Edition.

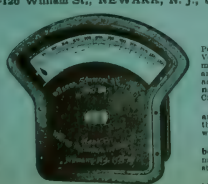
SPECIAL NOTICE.—We have no agents who are authorized to quote prices. Please communicate direct with us. We are always glad to send expert engineers to look over the ground and submit estimates. It requires an expert knowledge of the economizer business to properly determine what is required.

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a easily designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influence of external magnetic fields.



Weston Standard Illuminated Dial Station Ammeter, Style B. "Flush Type."

Weston Standard

Portable Direct Reading Voltmeters and Millivoltmeters, Ammeters and Milliammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

HIGHEST AWARDS

PARIS 1867. CHICAGO 1893. PHILADELPHIA 1876.

INSULATED WIRES AND CABLES. AERIAL, UNDERGROUND, SUBMARINE.

KERITE TAPE.

Nature's Laws and—

WILLARD BATTERIES

Work in Harmony.

What we claim for the Willard Battery is, that its mechanical and electrical construction is so obviously correct that any one familiar with storage batteries of the past and present and their hereditary defects can determine at a glance that all such defects are provided against, and that it is built on lines in such harmony with the inexorable laws of Nature as will insure harmonious action of the parts and consequent long and serviceable life. While we claim electrical superiority in the Willard plate, yet we maintain that the greatest faults of past and present batteries lie in their mechanical construction, and so great are these errors and so general are they, that you will find it difficult to find a storage battery that has lived to a ripe old age and gradually worn out in a theoretically natural way, while the generality will be found to have met with a violent death at an early age, which is directly attributable to their mechanical construction.

The rigid supports in all various styles and shapes lead in promoting havoc, and all of the numerous cases of violence to self is directly due to such like attempts to restrain Nature. The broken supports, shelves, grids, receptacles and pellets, the bending, buckling, warping, and other distortions of the plates, pellets and parts are all the progeny of mechanical restraint. Consequently, one of the greatest features of the Willard plate is its provision for the laws of Nature. Sufficient room is left for the expansion and growth of the active material, and any disposition to restrain Nature is entirely absent; on the contrary, Nature is a full partner in the Willard plate. While other plates are vainly attempting to prevent the expansion occasioned by the electric action and the growth of the active material, and making such poor success as to gradually become more distorted and less recognizable, the Willard having provided for and invited the assistance of Nature, improves with age as the active material increases and only ceases to perform its functions when, after a long period of time, it has in a natural way gradually worn away.

We show on this page a cut of the Willard plate, which will exhibit its construction. It is made from a single piece of pure rolled lead, of the same original thickness throughout. The thin leaves or shelves that you see are integral with the web or support; they are a part of the original plate of lead, and have never been detached therefrom: the angle of the leaves admits of the expansion and growth of the active material, with no ill effects whatever to the plate.

If the reader will call to mind all of the defects in storage batteries that his experience has developed and trace each one back to its source, and compare the troublesome feature with this plate, we think he will find the same is entirely overcome.

We are equipped for the manufacture in large quantities of batteries of all sizes and for all purposes, and we invite anyone interested to examine and test our product, and will supply goods for this purpose at special prices.

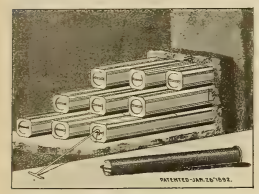
Western Electric Co.,
CHICAGO. NEW YORK.

The H. B. Camp Co.'s Vitrified Clay Conduit



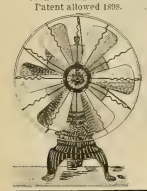
For UNDERGROUND TELEPHONE, TELEGRAPH and ELECTRIC LIGHT WIRES, and UNDERGROUND TROLLEY SYSTEM FOR ELECTRIC STREET RAILWAYS. . . . . .

Manufactured by The H. B. CAMP CO., Aultman, Ohio.

Our conduit is made of specially prepared clays, is thoroughly vitreous and glazed, making it acid, gas and water proof, and is not affected by electrolysis. Standard size is 3 inch internal diameter. However, we can make any size or multiple duct. Our patent mandrel used in laying our conduits prevents the possibility of shoulders, and insures good alignment of bore. We claim for strength, economy, durability, cheapness and perfect insulation it is the best, and is used by the most prominent companies. Any information promptly given. Write for catalogue.

THE H. B. CAMP CO., - AULTMAN, OHIO, U. S. A.

THE "AMERICA." Patent allowed 1898.



THE only Water Motor that can be adjusted or tilted in any direction while running. Ordinary house supply at 30 lbs. pressure will drive fan, sewing machine, dental engine or dynamo, etc. Motor 7 inches diameter will run over 2,000 revolutions per minute with 50 to 60 lbs. pressure. Price with pulley and brass balance wheel, $13.50 cash; with 12-inch polished brass fan and guard, $14.40 cash. Agents wanted.

LINES
NEVER

HART FLUSH SWITCHES.

BEST and CHEAPEST.

As here illustrated, we make Flush Switches with both Round and Rectangular Bases. Our ROUND style Base will fit our regular Iron Frames and Boxes. Our RECTANGULAR Bases are adapted for narrow recesses, such as Frames and Boxes usually used for "Push Button" Flush Switches. You will therefore note that if some other style of Flush Switch which you have in use causes trouble, you can replace it with a

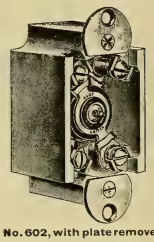
No. 202, with plate removed.

HART FLUSH SWITCH

without disturbing your own frame or box. Simply take out the defective Switch and replace it with a HART.

For full particulars, see our Illustrated Catalogue, pages 14 and 28.

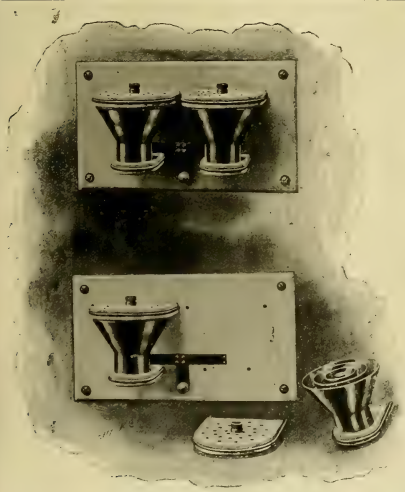
All Electrical Supply Houses carry these Switches in stock, and can fill orders without delay.



No. 602, with plate removed.

Make your orders read "HART" Switches, and you will be well satisfied with value received.

THE HART & HEGEMAN MFG. CO., Hartford, Conn.



NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

STANLEY ELECTRIC MANUFACTURING COMPANY,

PITTSFIELD, MASS., U. S. A.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY,
CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

SWITCH BOARDS.
SWITCHES AND PANEL BOARDS.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.60.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.50.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 238 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McJannum, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.25.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 25 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 89 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 735 pages. 326 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 339 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

BULLOCK GENERATORS!

THE BULLOCK ELECTRIC MFG. CO., CINCINNATI, O.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book,** much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables....$1.00

Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0 50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth....$2.00
Paper....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations....$2.5[illegible]

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents Illustrated. Revised edition....$2 50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition....$3.00

Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.

Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition....$2 00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations....$2 50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892....$7.25

In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition....$4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations....$1 50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged....$1.50

Prindle, H. B—A Popular Treatise on the Electric Railway of to-day. Fully illustrated....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Handbook. 7th. edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated....$1 00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated, ...$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66)....$0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of....$3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75)....$0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages....$6 00

Trevert.—How to Make Electric Batteries at Home. Illustrated....$0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions....$2.00

Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).$0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated....$1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895....$1.00

The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

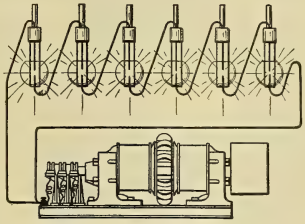
THE BRUSH ELECTRIC COMPANY

BRUSH

THE BRUSH ELECTRIC COMPANY

Brush apparatus has been on the market for twenty years. A majority of customers order supply parts direct from us. Many do not. We want this trade and are reducing our prices in order to secure it. Ask for quotations and send orders to the nearest Sales Office.

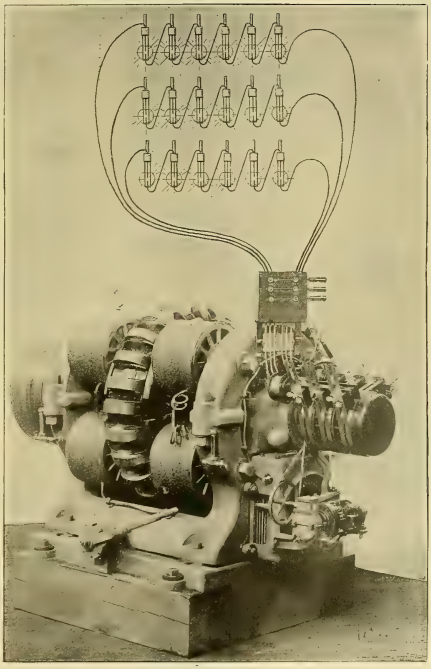


SERIES ARC LIGHTING.

SALES OFFICES:
Schenectady, N. Y.
Cleveland, Ohio.
Boston, Mass., 180 Summer Street.
New York, N. Y., 44 Broad Street.
Philadelphia, Pa., 509 Arch Street.
Cincinnati, Ohio, 420 West Fourth Street.
Chicago, Ill., Monadnock Building.
St. Louis, Mo., Walnwright Building.
Atlanta, Ga., Equitable Building.
Denver, Colo., Kittredge Building
San Francisco, Cal., Claus Spreckels Building.
Toronto, Ont., Canadian Gen. Elec. Co., Ltd.
Pittsburg, Pa., 502 Tradesman's Bank Building.

Many stations have exchanged all their small units for large Brush arc dynamos. Among them in lights' capacity are:

Buffalo	4,250
Brooklyn-Citizens	3,360
Newark, N. J.	3,000
New Orleans	2,250
Cleveland	2,150
Philadelphia Brush	1,500
New York City	1,375
Philadelphia-Northern	1,300
Brooklyn-Municipal	1,200
Worcester	1,000
Washington, D. C.	1,000
Toronto	900
Harrisburg	750
Malden, Mass.	720
Cambridge, Mass.	720
Norfolk, Va.	720
City of Chicago	700
Boston, Mass.	660
Quebec	625
Paterson	625
John Wanamaker	625
Brooklyn, Kings Co.	625
Rockford, Ill.	625
Erie	500
Albany	500
Troy	500
Carnegie Steel Co.	500
Manchester, N. H.	500
Reading, Pa.	500
Montgomery, Ala.	480



BRUSH MULTI-CIRCUIT 125-LIGHT ARC DYNAMO—1898.

Over 60,000 lights' capacity in large Brush arc dynamos sold. A large proportion of them using Multi-Circuit Dynamos.

The newly designed Brush dynamos have the following capacities: 55, 80, 100, 125, 240, 300, 2,000 candle power lights; 45, 85, 120, 160, 1,200 candle power lights.

Brush arc lamps were first used in 1877. More of them being sold to-day than ever before.

Two or more separate circuits run direct from one dynamo with any distribution of load on the different circuits. The advantages are absolute flexibility in handling of circuits; reduction of high voltages on circuits run from large dynamos; use of large units with corresponding increase of efficiency; saving in floor space, oil, belts, shafting, pulleys, attendance.

SHAFTING, GEARING, PULLEYS, PILLOW BLOCKS, GOVERNORS, ETC.

MINNEAPOLIS, MINN., April 15, 1898.

The Cincinnati Corrugating Co., Piqua, Ohio.

Gentlemen:—We have yours of the 2nd inst. regarding the effectiveness of your **Patent Edge Corrugation**, and in reply would say that this material gives excellent satisfaction, both to ourselves and to our customer. It makes a very nice looking job and is certainly as water tight when lapped one corrugation side lap as the ordinary sheets are if lapped one and a half or even two corrugations at the sides of the sheets. At the same time quite a percentage of material is saved. We remain, Yours truly,

THE GUTTER HANGING MFG. CO.
By FRANK I. LEWELLIN,
Chief Engineer.

THE PELTON WATER WHEEL

Is known the world over as affording the most simple, reliable and economical power for all purposes.

9,000 WHEELS NOW RUNNING

ELECTRIC POWER TRANSMISSION.

Filling every condition of service in a most efficient and satisfactory way.

Pelton Wheels are especially adapted to this purpose and are operating the majority of stations of this character in all parts of the world. Highest efficiency and best regulation guaranteed. Catalogues furnished on application. Address

PELTON WATER WHEEL CO.,

143 Liberty Street, NEW YORK, N. Y., U. S. A.

or

121-123 Main Street, SAN FRANCISCO, CAL., U. S. A.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.

Especially adapted to all kinds of

ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:

The highest power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running two feet below full gate. We guarantee also: *A runner of the greatest possible strength. A gate regardless of wear and easy to operate and closing tests show over 81 per cent. average efficiency with half to full water.*

State your Head and send for 124 page pamphlet.

JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

DIXON'S BELT DRESSING

AND LEATHER PRESERVATIVE.

Is guaranteed to prevent slipping and to preserve the leather. It will pay you to send for circulars and testimonials.

JOS. DIXON CRUCIBLE CO., JERSEY CITY, N. J.

NEW EDITION.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order and get one of these valuable books.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS. CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes. CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents. CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Paraded or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments, Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy, Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes, Different Styles of Brushes; Double Brushes, Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators, Finishing.—CHAPTER VIII: Current Regulation; Hand Regulation, By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: Automatic System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator, Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Brake.—CHAPTER XV: Westinghouse System of Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets, Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature. Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Fuse Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instrument.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters, Double Coil Voltmeter, Two Types.—CHAPTER XIV: Spring Meters; Curied Spring Meter.—CHAPTER XV: Tested Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

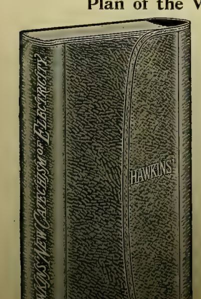
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

PERFECT MECHANICAL CONSTRUCTION, HIGHEST ELECTRICAL EFFICIENCY.

THE EMERSON ELECTRIC MFG. COMPANY,
ST. LOUIS, MO., U. S. A.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00**.

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. B *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kenne* Sc. D. 1 volume, 12mo, cloth, **$1.50**.

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F R S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00**.
The rapid advance of electrical science made it absolutely necessary to revise the last edition and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50**.
The most important work on the subject A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1 25**.
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Successful Carbon Rheostats!

Carbon Field Rheostats.

(Back of Board, Rear View.)

Carbon has long been looked upon as a most desirable means of obviating difficulties, but there has never been produced until now a carbon resistance which was practicable or marketable.

Having given years to the development of a carbon resistance, and after numerous failures, we have succeeded in perfecting a carbon resistance which is unquestionably a nearer approach to success than has yet blessed the labors of the experimenter.

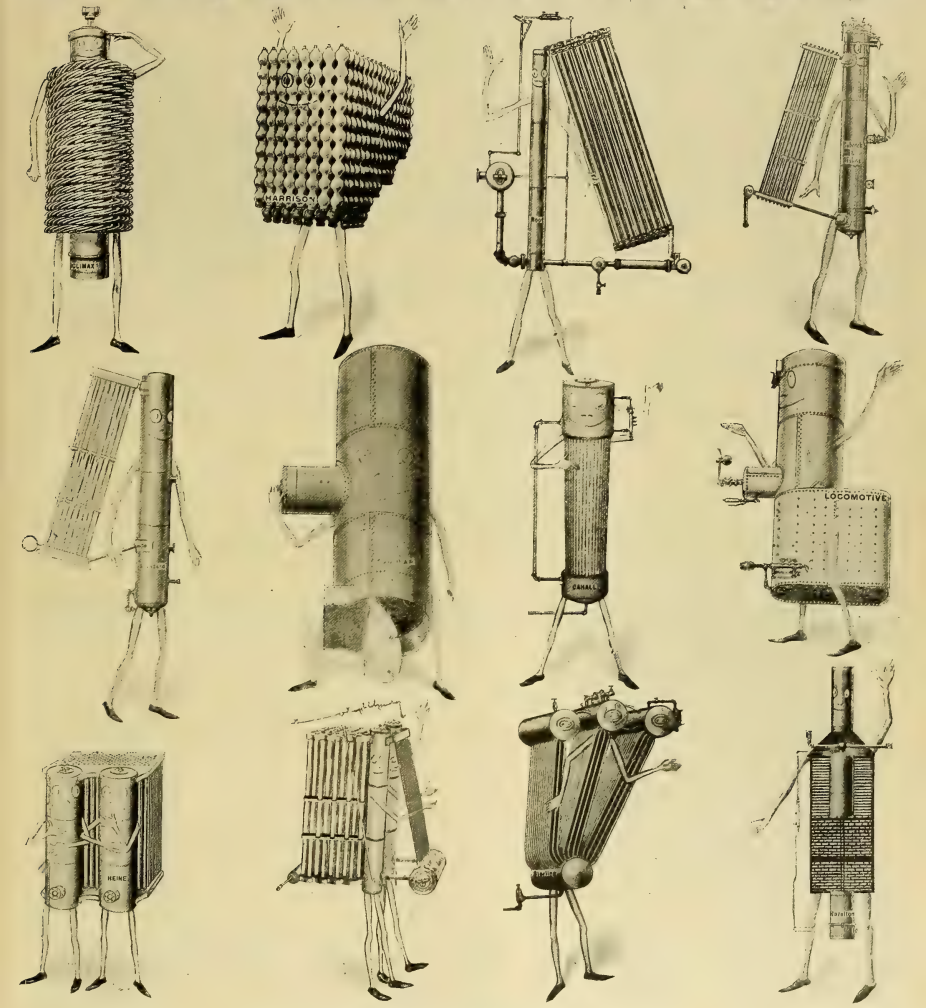
A FEW OF OUR PATIENTS!



OWNERS OF BOILERS—IMPORTANT.

Every modern physician recognizes the fact that no one medicine acts as efficiently or in the same manner on every human body, hence the common expression "What's one man's meat is another's poison," and so it is with the Steam Boilers. A quack medicine (a boiler compound) may hit the mark once in a hundred, but with the many different waters' as with the human being, the quack medicine misses.

The Dearborn Drug & Chemical Co. diagnoses your boiler's disease by analysis of the water and prescribes to suit its particular case—bear in mind, *prescribes especially* to cure *your* boiler of *its own particular disease.*

Figure and scheme as long as you wish, you'll find in the end this is the only *way* permanently to overcome boiler troubles—viz., by chemical analysis—our plan. Drop us a line and you'll receive interesting information.

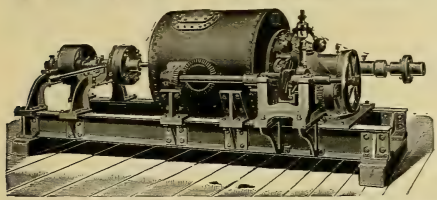
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL**, as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its diameter, being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 85 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs on horizontal shafts and where the situation admits of their use we recommend them.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address

THE STROMBERG-CARLSON TELEPHONE MANUFACTURING CO. CHICAGO.

A NEW THING!

Central Energy Telephone System.

THE SYSTEM OF THE FUTURE.

All the parts subject to deterioration and wear placed at Central Office, leaving nothing at subscribers' stations requiring attention. Reducing cost of maintenance to practically nothing.

CONVENIENT, DURABLE, ECONOMICAL.

The only system of its kind on the market. Our Transmitter and Receiver not being affected by the greatest variations in temperature or atmospheric changes and being locked to prevent all opening by inexperienced persons, leaves no possible cause for readjustment. They are the only instruments that can be used satisfactorily in such systems. Users of our regular equipment can readily change to the "system of the future."

TYPE "ZZ"

"THE FLOWER OF THEM ALL."

COMMON BATTERY SET, SYLE A.

OUR COMMON BATTERY SYSTEM.

FEATURES:

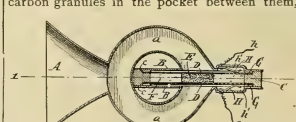
All batteries calling and talking, located at central.
No magneto generators; removing the receiver from hook calls the exchange.
One to twenty stations on a circuit.
Long-distance transmitter and new Bell double-pole receiver, short handle.
We furnish instruments and switchboard complete at one-third less cost of the old magneto systems with induction coils.
Our transmitters were designed specially for the U. S. navy to use in their divers' helmets. Positively no packing, as the same might prove fatal to a diver.

BOARDMAN-TUCKER CO.,

97 OLIVER STREET, BOSTON, MASS.

THE DOUBLE DIAPHRAGM

of the **Wilhelm Transmitter** secures a double compression of the carbon granules in the pocket between them, greatly increasing the volume, distinctness and carrying value of the voice. Will not "pack" under any circumstance, and cannot be injured by rough handling or pencil jabbing.



Recognized by experts as containing features that place it far ahead of all others.

WILHELM TELEPHONE MFG. CO.,

Caxton Building, Buffalo, N. Y.

Interior Thermostatic Electric Cables.

STANDARDIZED IN ALL B. & S. GAUGES.

We own the following Letters Patent issued by the United States, which broadly cover the construction and basic principle of our cables, viz.:

—GET OUR PRICES.—

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.
FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind: Ices will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

Electrician Publishing Co., 510 Marquette Building, CHICAGO.

NO. 30 AMERICAN TRANSMITTER.

This instrument, for volume of voice transmission, distinctness of articulation, exact reproduction of articulate sounds and durable qualities is unequaled.

The Largest Manufacturers of Telephones and Switchboards in the United States.

Five hundred exchanges aggregating over 160,000 telephones in use. Four years' service.

Write for catalogue showing new types and prices.

WE GUARANTEE Workmanship, material and efficiency of our apparatus to be of the *highest grade*, and agree to defend, at our own expense, any action at law which may be brought against our patrons on alleged infringement of patents owing to the use of our instruments.

American Electric Telephone Co.,

171-173 S. CANAL ST., CHICAGO.

"IMITATION THE SINCEREST FLATTERY."

Not long ago one of our competitors headed an advertisement like the above. Our lamps are known to the trade as

"WARREN LAMPS,"

And our company has been known as "THE WARREN CO." Owing presumably to the large amount of business we have been able to secure, our competitors have "that tired feeling" and are putting out a "Me Too" "Warren Lamp." Culls—old Pollard lamps—any old thing, all labeled "Warren Lamp" and sold at any old price. Our lamps are all fully guaranteed and we have no seconds, and they all have on the label our full name and address and will have till the end of the prize contest for choice of best and most appropriate name for our lamp, which contest closes November 1 next.

We offer cash prizes. Write for full particulars. We guarantee our lamps to give full candle power for a longer time for less money than any other lamp. This covers the whole ground.

THE WARREN ELECTRIC & SPECIALTY COMPANY,

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells: Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism; Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound: Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.**—Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories: Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches;.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

Electrician Publishing Co.,

510 MARQUETTE BUILDING, CHICAGO.

Western Electrician.

$3 per Annum. Copyright, 1898, by Electrician Publishing Company, Chicago. EVERY SATURDAY. Entered at Chicago Postoffice as mail matter of the second class. 10 cents per Copy.

Vol. XXII. CHICAGO, JUNE 18, 1898. No. 25

SIMPLEX INSULATED WIRES AND CABLES.

RUBBER COVERED, WEATHERPROOF, UNDERGROUND AND SUBMARINE.

WESTERN SELLING AGENT, H. R. HIXSON, 1137 Monadnock Block, CHICAGO.

Simplex Electrical Company,

75-81 Cornhill, BOSTON, MASS.

ALFRED F. MOORE,

MANUFACTURER OF

INSULATED ELECTRIC WIRE,

FLEXIBLE CORDS AND CABLES.

200 AND 202 NORTH THIRD STREET, - PHILADELPHIA, PA.

The Ansonia Electrical Co.,

ANSONIA, CONN.,

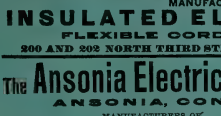
MANUFACTURERS OF

SHIELD BRAND MOISTURE-PROOF FEEDER AND LINE WIRES.

Magnet, Office, Damp-Proof Office and Annunciator Wires.

Hercules Trolley Wire,

Bells, Batteries, Annunciators and all House Goods Supplied.



1889—Paris Exposition, Medal for Rubber Insulation.

1893—World's Fair, Medal for Rubber Insulation.

THE STANDARD FOR RUBBER INSULATION.

Sole Manufacturers of

Okonite Wires, Okonite Tape, Manson Tape, Candee Weather-proof Wires.

THE OKONITE CO., LTD.

Willard L. Candee, H. Durant Cheever, Managers. 253 Broadway, New York. Geo. T. Manson, Gen'l Supt. W. H. Hodgins, Secy.

JOHN D. CRIMMINS, JR., Pres't.

Alcatraz Electrical Compound.

Absolutely unequaled for Insulating and Water-proofing; not affected by Acids or Alkalies; elastic and durable. Alcatraz Asphalt Paint is a tenacious and durable coating for all kinds of metal. Samples upon application.

Ask your nearest supply house for it, or

(Formerly California Asphalt Co.) **Atlantic Alcatraz Asphalt Co.,** 57 East 59th Street, NEW YORK.

THE "AMERICAN" FUEL ECONOMIZER.

THE BEST IN THE WORLD.

BROOMELL, SCHMIDT & CO., Ltd.

MANUFACTURERS,

YORK, PA., U. S. A.

Cable Address, Broomell, York. A B C Code, 4th Edition.

SPECIAL NOTICE.—We have no agents who are authorized to quote prices. Please communicate direct with us. We are always glad to send expert engineers to look over the ground and submit estimates. It requires an expert knowledge of the economizer business to properly determine what is required.

WESTON Electrical Instrument Co.,

114 120 William St., NEWARK, N. J., U. S. A.

Weston Standard Portable Direct Reading Voltmeters, Millivoltmeters, Voltammeters, Ammeters, Milliammeters,

Ground Detectors and Circuit Testers,

Ohmmeters, Portable Galvanometers.

Our Portable Instruments are recognized as **The Standard** the world over. The **Semi-Portable Laboratory Standards** are still better.

Our **Station Voltmeters and Ammeters** are unsurpassed in point of extreme accuracy and lowest consumption of energy.

HIGHEST AWARDS

PARIS 1867. CHICAGO 1893. PHILADELPHIA 1876.

INSULATED WIRES AND CABLES.

AERIAL, UNDERGROUND, SUBMARINE.

KERITE TAPE.

W. R. BRIXEY, Mfr.

203 Broadway, New York.

Western Office, Marquette Bldg., Chicago, Ill.

CALIFORNIA ELEC. WORKS, San Francisco, Cal. M. DUPEROW, Washington, D. C. NEW ORLEANS ELEC. CO., New Orleans, La.

Steel Dynamos and Motors, 8, 15, 20, 25, 50, 100, 200, 300 and 600-light machines. ½, 1, 2, 3, 5, 10, 15, 30 and 50 h. p. motors. State what you want and get our prices before ordering.

THE HOBART ELECTRIC MFG. CO. - Troy, Ohio.

A. L. McRAE, CONSULTING ELECTRICAL ENGINEER.

Estimates, Plans, Specifications, Examinations, Reports, Tests.

306 Oriel Building, ST. LOUIS, MO.

The Brady Mast Arms.

T. H. Brady, New Britain, Conn., U. S. A.

Manufacturer of Mast Arms, Pole and Swinging Hoods, House Brackets and other Specialties for Construction Work.—*Catalogues and Prices furnished on application.*

Insulating Paint and Varnish.

We were the first chemists in the world to make a special study of this problem. Our long experience and careful investigation enables us to be of service to wide-awake electricians.

MASSACHUSETTS CHEMICAL COMPANY, Boston, Mass., U. S. A.

Queen & Co.,

1012 Chestnut St., PHILADELPHIA.

Acme Testing Sets, Queen-Wirt Switchboard Instruments, X-Ray Focus Tubes, Induction Coils.

FOR ALL OPEN CIRCUIT WORK.

Points of Superiority Over All Other Types.

In successful use for ten years. Standard high. Prices low. Send for descriptive circular and testimonials.

The Burnley Battery & Mfg. Co., PAINESVILLE, OHIO.

I-T-E CIRCUIT BREAKERS

CUTTER ELECTRICAL CO., PHILADELPHIA

Charles Munson Belting Co.,

DYNAMO BELTING A SPECIALTY.

34 and 36 Canal Street, CHICAGO.

National India Rubber Co's RUBBER COVERED Wires and Cables.

OFFICE AND FACTORY: BRISTOL, R. I.

WE DELIVER on trial or approval, not to be paid for unless giving perfect satisfaction,

YORKSHIRE BOILER COMPOUND.

Used in England and the U. S. for the past 50 years, by largest manufacturing and power plants.

SCALE AND WATER ANALYZED FREE. Also

CARR'S SOLDERING CRYSTALS, FOR ELECTRICAL PURPOSES.

Testimonials and References on Application.

CARR MANUFACTURING CO.,

22 Medford Street, " " " BOSTON, MASS.

MEYSENBURG & BADT, ENGINEERS,

F. B. BADT, R. E., M. E., E. E. EDW. A. MEYSENBURG. WM. GOLTZ, E. E.

Suite 1504 Monadnock Block, CHICAGO, ILL.

For **10 Cents** in stamps to pay postage, we will send **FREE** to anyone in electrical business, one elegant lithographed box of suitable size for holding legal papers or other valuables. THIS OFFER FOR 10 DAYS.

Write for NEW CHART illustrating and describing our improved line of Tested Fuse Wire, Fuse Strip, Fuse Links. Also best line of Tel. & Tel. Fuses and Blocks.

CHICAGO FUSE WIRE AND MFG. CO.,

TELEPHONY.

There is perhaps no other branch of electrical engineering so inadequately treated of in our colleges and our technical literature as telephony.

Recognizing this fact

The Electrical Engineer Institute of Correspondence Instruction

Offers to the thousands who are engaged in this line of work a special course in telephony prepared by **one of the foremost Telephone Experts in the country.**

This course includes all the necessary preliminary studies of a special engineering course of this kind and concludes with the full and comprehensive study of telephony proper as outlined in the following brief synopsis:

TELEPHONY, SPECIAL COURSE NO. 1.

I. Transmitters and Receivers.
II. Exchange Systems.
III. Central Office Equipment.
IV. Central Office Power Plant.
V. Subscribers' Stations.
VI. Line Construction.
VII. Protection.
VIII. Properties of Telephone Circuits.
IX. Interferences from Outside Sources.
X. Special Branches, including

Private Lines.
Time Service.
Selective Signaling.
Trunking between Exchanges.
Trunking between Cities.
Automatic Ringing.
Phonographic Busy Test.
Theatrical Telephony.
Military Telephony.
Miner's Telephony.
Diver's Telephony.
Municipal Telephony.
Private Branch Exchange.
Speaking Tube Sets.
Automatic Switchboards.
Duplex Telegraphy.
Simultaneous Telegraphy and Telephony.

For a complete and detailed synopsis write for our FREE book entitled **"Can I Become an Electrical Engineer?"** and state the subject you are interested in.

Instruction by Correspondence Only. **Our References: Any Prominent Electrical Engineer.**

Instruction Payable in Installments of $2.00 Per Month.

Requirements for admission: Nothing more than the ability to read and write.

For full information and our free book entitled, **"Can I Become an Electrical Engineer?"** address

The Electrical Engineer Institute of Correspondence Instruction,

DEPARTMENT OF ELECTRICAL ENGINEERING,

120 LIBERTY STREET, NEW YORK, U. S. A.

Herman A. Strauss, E. E.,
GENERAL MANAGER

F. HARDTMUTH & CO., VIENNA, AUSTRIA.

We having received a very large shipment of

CORED CARBONS

Just before the new tariff went into effect, are prepared to make very low prices on the following sizes: 5-8 in. by 10 in. and 1-2 in. and 19-32 in. by 9 1-2 in.

Chicago Edison Company,

General Western Agents, 139 Adams Street, Chicago.

SUSTAINED CANDLE POWER

Means for the Central Station **SATISFIED CUSTOMERS.** It is the Strong Point of the

HARDY INCANDESCENT LAMP.

To prove it we will express you, charges prepaid, on receipt of order, one dozen 16 C. P. 3 or 3½ watt lamps, any base, any voltage, from 45 to 125, for $2.16. . . . . .

AGENTS WANTED. CORRESPONDENCE SOLICITED.

THE K. & W. COMPANY,

o——MANUFACTURERS OF——o

Hardy Incandescent Lamps, Dynamo Brushes, Absolute Cutout Hanger Boards, Commutator Compound, Spark Arresters, Etc.,

PITTSFIELD, MASSACHUSETTS.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

OKONITE TRADE MARK

The CENTRAL ELECTRIC Co.

MANUFACTURERS, IMPORTERS AND JOBBERS IN **Electrical Supplies**

CHICAGO.

OKONITE TRADE MARK

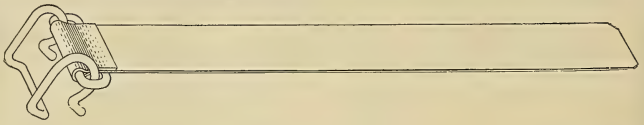
GEORGE A. McKINLOCK, Pres.
CHARLES E. BROWN, Sec'y.
S. R. FRAZIER, Treas.

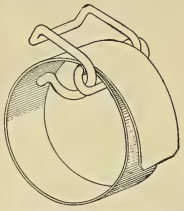
THE BEST APPOINTED AND LARGEST ELECTRICAL SUPPLY HOUSE IN THE WORLD.

264-266-268-270 Fifth Avenue.

Howes Line Wire Tool.

A handy tool for a man up a pole—good as a third hand.

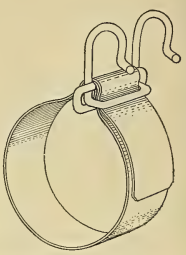


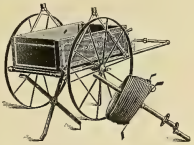


Boston Cable Clip.

Two pieces steel wire and a piece of zinc.

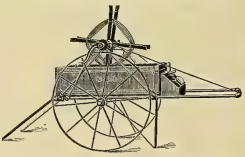
The simplest and strongest. Easy and quick to adjust, and stays.





A Telephone Push Cart.

All iron and steel, except the box. Carries wire, tools and everything necessary. A regular commissary department.



The American Grip.

(PATENTED.)

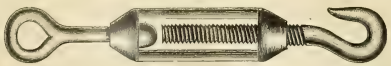
THE CROSBY WIRE ROPE CLIP.

Central Galvanized Grip.

A Line of Grips.

Galvanized Guy Rods.

5/8-inch diameter, any length.



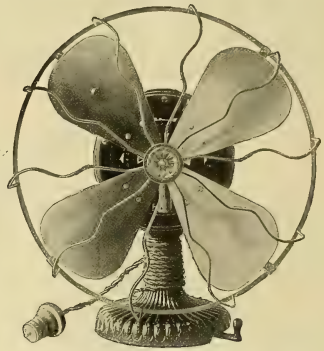
All sizes and styles in Chicago stock. Double Eye—Hook and Eye—Double Hook. Japanned or galvanized.

Galvanized Guy Cable.

7 Strand—1/4 to 1/2, carried in Chicago stock.

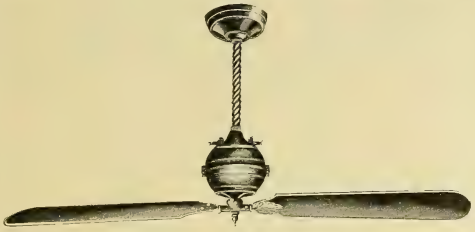
ATMOSPHERIC ACCELERATORS.

Westinghouse Alternating Fan Motors.



50 and 100 Volts. 7200-1600 Alternations.
13 Inch Blades.

IN CHICAGO STOCK.



SENIOR CEILING FAN MOTOR.

The Senior Ceiling Fan Motor

is the only motor suitable for continuous operation on 500 volt circuits.

Lundell Direct Current Fan Motors

12 INCH AND 16 INCH

Desk and Bracket.

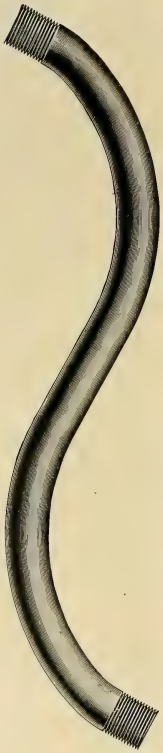
IRON ARMORED INTERIOR CONDUIT.

Introduced and standardized by Interior Conduit and Insulation Company.



NEW PRICES.

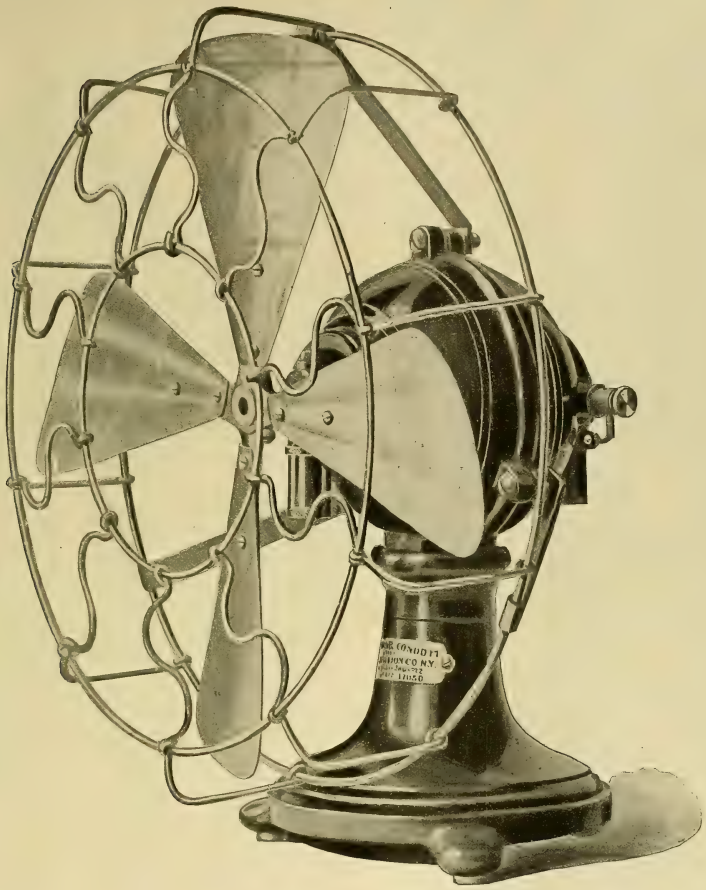
UNEQUALLED PRODUCT.

This conduit has earned for itself the favor of the U. S. Government, Insurance Experts and thousands of builders all over the country.

The only conduit which has proved its worth during years of practical use. Competitive tests have only emphasized its superiority.

SPRAGUE ELECTRIC COMPANY,

CHICAGO---Marquette Bldg. **NEW YORK CITY---20 Broad St.**

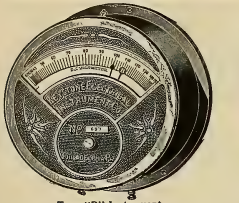


1898 **Lundell Fan Motors.** 1898

Advance orders, greatest in the history of the business, attest the popularity of these motors. They are the world's standard. '98 styles are—some of them—new. '98 prices are lower than ever. Catalogue—second edition—just out.

SPRAGUE ELECTRIC COMPANY,

CHICAGO—Marquette Building. NEW YORK—20 Broad Street.



Type "R" Instrument.

Keystone Electrical Instrument Co.

Switchboard Voltmeters, Ammeters, Ground Detectors and Differential Voltmeters.

We meet all the requirements of modern Central Stations or Isolated Plants, whether using direct or alternating current circuits.

Our instruments are constant and durable, sensitive and accurate, pleasing in appearance and always correct.

We can interest you in prices and other details if you will write to

DIEHL MANUFACTURING CO.,
ELIZABETHPORT, N. J.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

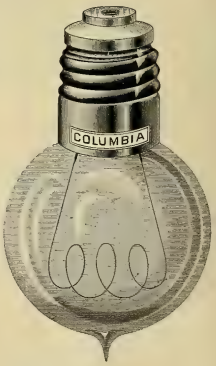
COLUMBIA LAMPS

UNEQUALED IN QUALITY.

We solicit the business of central stations and isolated plants on the claims for superiority of Columbia Lamps which we are prepared to carry out in actual service.

The filaments used in our product are made in our own factory under our own supervision; and the detail followed in every department of the factory, and the care used in the proper selection of lamps, makes it possible for us to guarantee Columbia Lamps absolutely uniform in every respect.



Send us a trial order and be convinced that our claims are well founded.

Special prices on annual contracts where requirements equal or exceed 1,000 lamps.

Prompt shipments from factory and branch offices.

Incandescent Electric Light Manipulator.

MOST incandescent lights in large buildings are at such heights and angles that it is necessary to use large ladders, which take a couple of men to handle and considerable time, and also the liability of chipping stucco work and scratching interior finish. The device here described one man can operate, keep burnt-out lights replaced, clean the same, and thereby receive the full benefit of the power you pay for. The device is mechanically built to last, and all parts can be duplicated. The nippers are made to fit the incandescent bulb, and are lined with RUBBER. Will get a good grip and will not break bulb. A toggle action, connected with nippers by a braided cord, and carried down through centre of springs and inner tubing, and made fast to a ratchet lever, the turning of which tightens nippers on bulb and releases the same when replacing or cleaning the lights. The outer cord, shown in cut, or a set screw, sets the spring to correspond with the position the light may be in chandelier or wall socket. This angle arrangement works on three sliding ferrules, or round bands, affixed to spring and tube. The turning of pole in operator's hands will unscrew the burnt-out lamp from socket and replace same.

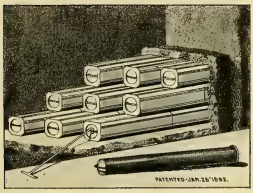
The device is used by the Edison Electric Light Co., State House, Trinity Church, Mission Church, McKenney, Waterbury, Pettingill-Andrews, Department of Public Grounds, Hall, Downing, Stowe Co., N. Y. Athletic Club, Post-Glover Electric Co., Corre Hotel Co., Cinn., Western Electric Co., Chicago, J. Laffargne, Paris.

Send the length of pole desired, reach of your lights, and the shape and candle power, and I will quote you price.

All goods nickel-plated. Special prices quoted. ☞Agents wanted.

J. J. DUNN, Manufacturer,
HYDE PARK, MASS.

The H. B. Camp Co.'s Vitrified Clay Conduit



For UNDERGROUND TELEPHONE, TELEGRAPH and ELECTRIC LIGHT WIRES, and UNDERGROUND TROLLEY SYSTEM FOR ELECTRIC STREET RAILWAYS.

Manufactured by The H. B. CAMP CO., Aultman, Ohio.

Our conduit is made of specially prepared clays, is thoroughly vitreous and glazed, making it acid, gas and water proof, and is not affected by electrolysis. Standard size is 3 inch internal diameter. However, we can make any size or multiple duct. Our patent mandrel used in laying our conduits prevents the possibility of shoulders, and insures good alignment of bore. We claim for strength, economy, durability, cheapness and perfect insulation it is the best, and is used by the most prominent companies. Any information promptly given. Write for catalogue.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 The Rookery,
Chicago, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago. Ill.

Gentlemen:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

ROEBLING'S BI-METALLIC WIRE

Is not a new product—on the contrary, it has been on the market for several years; it has been tried by many wire using companies and has not been found wanting in either electrical or mechanical qualities. The question of cost also appeals to users, because bi-metallic is

CHEAPER THAN COPPER.

PRACTICAL Guide for Firemen,

By W. H. WAKEMAN.

Price 75 Cents.

80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal Hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 8,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood.

IT TELLS HOW

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action (concluded).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltameters.
10. Measurement of electrical resistance.
11. Every-day measurements of electric currents and pressures.
12. Every-day measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic disposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (concluded).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

TO DO IT RIGHT

FOUR PRIME FEATURES OF SUPERIORITY:

"Electricity and Magnetism" differs materially from any other book that was ever published on the subject. Its characteristic features are:

1. Its Authority.—It was written by a corps of men eminent in the Electrical profession, whose life work is the study of the science and the imparting of their knowledge to others. No other electrical book ever published has had such an array of talent on its electrical staff.

2. Its scope.—It treats the subject from its primary and fundamental principles to its practical application, covering the Nature and Properties of Electricity, the Methods of Generation, its Principles of Action, and the laws which govern it.

3. Simplicity of Language.— Out of every hundred people who are interested in Electricity, there are ninety-nine who have not had the advantages of more than an average education. The other one perhaps may be a college-bred man who understands the higher mathematics and can read technical works on electricity and comprehend them. But this book is intended for the ninety and nine, and hence has been written in language that the man of average education can understand. All superfluous technicalities and intricate mathematical equations have been eliminated and the whole subject is made plain and practical.

4. It is a Catechism.—At the beginning of each chapter or lesson throughout the book, is a series of questions, bearing upon the previous chapter or lesson, and intended to bring out every point of importance in it. The reader can thus catechise himself and determine whether in his reading he has extracted all the information that it was intended he should have.

Stover Bicycle Manufacturing Co.

FREEPORT, ILL., March 2nd, 1897.

IT COSTS SO LITTLE AND WORKS SO WELL

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

The Electrical Mach. Co., Minneapolis, Minn.
Bagnall & Hilles, Yokohama, Japan.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

Lynn Incandescent Lamp Co.,

LYNN, MASS.

The Zamel Arc Light Meter

AND ELECTRIC CURRENT TIMER

Is the ONLY RELIABLE DEVICE for Timing the Use of Arc Lights,

It Is Positive in Its Action.

SEND FOR CIRCULAR.

Zamel Arc Light Meter Co.,

266 BLUE ISLAND AVE., CHICAGO, ILL.

Approved by the National Fire Underwriters' Association.

TRADE MARK:
"Chloride Accumulator"
REGISTERED SEPTEMBER 11, 1894.

A Third Order Is Significant.

THE NEW YORK EDISON COMPANY

has contracted for a third battery of

CHLORIDE ACCUMULATORS.

150 Cells of 4,000 ampere hours capacity.

A TECHNICAL EDUCATION 50 CENTS A WEEK.

The new installment plan of The International Correspondence Schools, Scranton, Pa.—the largest and most successful institution teaching technical subjects by mail—places an education within the reach of all. Students may enroll upon paying $2 in advance, the balance to be paid at the rate of $2 a month. The charges are moderate and include all necessary text-books. Studies are carried on at home without loss of time from work.

The Electrical Power and Lighting Scholarship is a thorough course of instruction in the installation, care and operation of electric light, power and railway plants designed to meet the wants of busy men who wish to put into actual practice as soon as possible the information they acquire.

The Mechanical-Electrical Scholarship includes instruction in mechanical and electrical engineering and is intended especially for those who wish to become designers of electrical machinery.

Also 43 courses including Steam Engineering, Mechanical Drawing, Machine Design, Civil Engineering, Bookkeeping, Shorthand and English branches.

Write for circular, stating subject in which you are interested.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, BOX 1002, SCRANTON, PA.

WANT ANY RHEOSTATS?

If so, write us for particulars.

PRACTICAL
Guide for Firemen,

BY W. H. WAKEMAN.
Price 75 Cents.
80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surround ngs will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

PRACTICAL
DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring.

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Dear Sirs,—

Let me compliment your proffe on the way you do business I order a book of you from this city at 12 o'clock noon when I go to dinner the next noon the book is there waiting for me. That is as quick work as I ever heard of Ym people must do business like Drury "did the Spaniards". Your all right.

Have you a book with working drawings of a one two, or 3 light (16cp) dynamo with a laminated field and armature

If you have please quote me on the same. Also what author.

Yours truly
A. W. Parsons

—GET OUR PRICES.—

THE MICHIGAN PIPE CO., Bay City, Michigan, U. S. A.

CREOSOTED WOOD CONDUITS
FOR UNDERGROUND WIRES.

FOR TELEPHONE, TELEGRAPH AND ELECTRIC LIGHT COMPANIES.

There are advantages in using CREOSOTED WOOD CONDUITS not obtained in using any other kind; lies will not be scratched by being drawn through them; no concrete foundation, sides or top required; wires in creosoted wood conduits are most easily reached between manholes; subways constructed with creosoted wood conduits in less time than by any other. In parks and on boulevards they are the best because vegetable growth is prevented, keeping roots away from cables.

STREET RAILWAY MEN—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail, Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A), General Electric (K, with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake), Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

100 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.
